## THE LATE HON. LOUIS TOURVILLE.

EARLY in November, after a somewhat protracted illness, Hon. Louis Tourville, member of the Legislative Council of Quebec, and president of The Tourville Lumber Mills Co., died in the city of Montreal. Ever since his severe illness of last year he had been feeling unwell, but was not compelled to withdraw from business until a few days previous to his death. Deceased was prominently connected with many commercial enterprises of the province, and was recognized as an eminently successful business man.

Hon. Mr. Tourville was born on February 13th, 1831, in the city of Montreal, and was therefore 65 years of age. After receiving a sound commercial education, he was employed as dry goods salesman, and in the year 1854 embarked in that business on his own account, and afterwards conducted a grain and provision store. In 1880 he established the lumber firm of Tourville & Co., his partner being the late Mr. Joel Leduc. In this venture he was remarkably successful, and some years afterwards the name of the firm was changed to The Tourville Lumber Mills Company. The headquarters of the company were in Montreal, and the saw mills located at Louiseville, Nicolet and Pierreville. In 1891 incorporation was granted, the capitalization being $250,000. In the vicinity of thirty-five million feet of lumber are handled each year, large cargo shipments being made to foreign markets.

Not alone to the lumber business did the deceased direct his attention. In 1873 he founded the Hochelaga Bank, of which he was president until the year 1878. He had also been president of the Montreal Exposition Company, the South Shore Railway Company, and the Imperial Electric Light Co., an honorary director of the Equitable Life Assurance Company of New York, and a member of the Council of the Board of Trade.

Mr. Tourville was appointed to the Legislative Council by the late Mr. Mercier in 1888 in recognition of the signal service he rendered to the Liberal cause in the province, and had ever accorded a hearty support to a policy of international development of her own resources. By his death the Liberal party are placed in a minority of two in the Legislative Council.

In the year 1856 he married Miss C. St. Jean, who died three years ago. A family of six children survive him.

---

A subscriber to the Wood Worker writes that he has found the best way to pile lumber which is to go into the dry kiln is to place it edgewise, properly supported beneath, and with strips between to allow air circulation and close enough together to prevent any sagging sidewise of the lumber to be dried. A little more moisture on one edge is not nearly so bad as too much on one side.

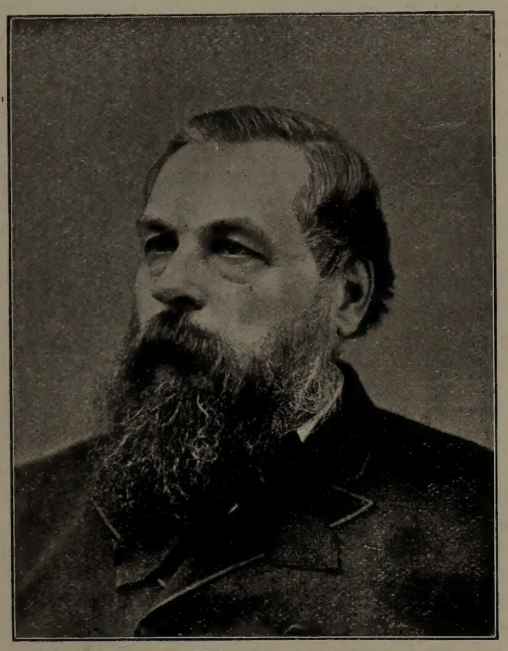
## BRITISH COLUMBIA SHINGLE MILLS.

OUR representative in British Columbia furnishes the following particulars of some British Columbia shingle mills :

### H. H. SPICER & CO.

Among the largest manufacturers of shingles in the western province are Messrs. H. H. Spicer & Co., of Vancouver. This business was established on False Creek, at the end of Cambie street, in 1888, and has continued to grow ever since. The output is shipped to all parts of the Dominion, as well as to the United States, some going east of the Mississippi river.

The premises have a frontage on False Creek of 187 feet. The Canadian Pacific Railway track



THE LATE HON. LOUIS TOURVILLE.

runs through the yards. The principal output of this establishment is shingles, which have a far-reaching reputation. The various buildings are thoroughly well equipped with the most improved machinery, including a Perkins ten block machine, manufactured by the William Hamilton Mfg. Co., and two Challoner double block machines. Three large boilers and two engines, 18 x 36 and 14 x 20, supply the power. Self-feeders are used for conveying the saw-dust to the furnaces. The new dry-kiln consists of a 7,000-foot heater and a 110-inch fan, driven by a 7 x 10 inch engine. The capacity of this kiln is two and a quarter million shingles. The total capacity of the mill is one hundred million shingles per annum. From 55 to 65 men are employed at the mills, and from 25 to 35 in the woods. As will be noted, the shipping facilities, both by water and rail, are excellent.

### HASTINGS SHINGLE MANUFACTURING COMPANY.

Messrs. James A. and Robert McNair established the business at Hastings known as the Hastings Shingle Manufacturing Co. three years ago. The shipments from this firm are also extensive, and extend throughout Canada and the United States, some having been made to Boston and other Atlantic sea ports.

The main mill is 60 x 35 feet, equipped with the most modern machinery. The dry-kiln is 100 x 35 feet. Various other buildings complete the establishment. A staff of 25 men are employed in the mill, which, when running day and night, has a capacity of forty million shingles annually.

A second mill owned by this firm was destroyed by fire about March last, and in six weeks another one was built and running. This, like the former, is equipped with the most modern machinery, and affords employment for 50 men. It has a yearly capacity of forty million shingles.

This firm control the output of the Buse shingle mill, the capacity of which is twenty million shingles per annum, thus making a total capacity for this firm of one hundred million shingles annually.

They have several thousand acres of very fine cedar limits on Burrard Inlet, from which their cedar blocks are supplied.

### ARCHIE MCNAIR.

Another shingle establishment at Hastings is owned by Archie McNair, and was established three years ago.

The concern has a well-equipped plant, operated by steam power, and using the latest appliances. A specialty is made of red cedar shingles, and the output averages ten millions per annum. A ready sale for these is found in all parts of Ontario, the Northwest, and in the Eastern United States markets.

---

## WOOD PULP BICYCLE FRAMES.

WOOD pulp is the latest material for the making of frames for bicycles. The use of wood after it has been ground up and reduced to a pulp is not so new as many people suppose. As far back as 1719 a Frenchman named Reamur published an essay upon the subject, taking his hint from the wasps, whose paper-like nests are literally made from wood pulp manufactured by those insects. But it was only 30 or 40 years ago that any practical trial of the matter was made, and it is almost wholly within the last quarter of a century that the industry has begun to attract attention and assume importance. For some time past railroad car wheels have been made from wood pulp, and also many other things which are exposed to great strain in use, and now the attention of bicycle makers has been attracted to this useful article. — Cincinnati Tribune.

---

Resolutions have been passed by the Board of Trade at Thorold and Owen Sound requesting that the Government impose an export duty on pulp wood.

The total cut of the Minneapolis saw mills in 1895 was 479,000,000 feet. In 1896 a reduction of 37 per cent. was made, the production being 300,000,000 feet.

## AGAINST FREE LUMBER.

UNITED STATES LUMBERMEN REQUEST THE RESTORATION OF AN IMPORT DUTY.—PERMANENT ORGANIZATION EFFECTED TO CONSIDER TARIFF LEGISLATION.

IN response to a call issued by the publishers of the Timberman and Northwestern Lumberman, of Chicago, acting under instructions from the Southern Lumber Manufacturers' Association, about 150 delegates convened in the city of Cincinnati, Ohio, on the 16th of December, to discuss the tariff question and to take action to secure the restoration of an import duty on lumber. Delegates are said to have been present from every lumber state in the union, and the representation included wholesale and retail dealers and manufacturers.

Upon opening the convention, Mr. Judson, of the Northwestern Lumberman, was called upon. He dwelt upon the injurious effect of Canadian competition in lumber, and stated that over $500,000,000 were invested in mill plants in the United States, giving employment to more than half a million persons, to whom $141,000,000 in round numbers was paid in wages annually.

Mr. Defebaugh, of The Timberman, followed, delivering an eloquent and carefully prepared address, and submitting the following figures for the consideration of the delegates :

IMPORTATION OF CANADIAN BOARDS, DEALS AND PLANKS TO THE UNITED STATES.

| Year. | Thousand Feet. | Value. |
|---|---|---|
| 1888 | 608,326 | $7,497,078 |

Lumber product of Ottawa District, Can., in 1896 ..... 552,500,000 ft.
Total United States imports of boards, deals and planks for the nine months ending September 30, 1896 ..... 549,522,000 ft.

A portion of Mr. Defebaugh's remarks were as follows :

The true influence of the tariff is only seen when we compare the statistics of particular years with our commercial condition at those times. It will be noted that the year 1891 showed an increase in imports over the preceding year of nearly 100,000,000 feet to a total of 757,149,000 feet. During this year the McKinley bill was in effect. The reduction of the duty had let in a large amount of low grade Canadian stock that the higher duty previously in force had kept out. Many of you will recall the immediate developments at the gateways leading from Canada into this country, at Niagara, Lake Ontario ports, and on the northern boundaries of New York and New England.

The next year, 1892, imports dropped off materially, owing, it is believed by many of our lumbermen, to the assumed fact that Canada during the previous year had to a certain extent disposed of her surplus and was merely getting in readiness for the larger business which she did later on. The year 1893 showed another increase, bringing the imports almost up to the largest previous year.

But during 1893 came the panic and the period of dull trade that succeeded it. Canadian lumbermen at once felt the effect of that financial convulsion. Its exportations to this country of boards, deals and planks, which are the classes of product that I am in this connection considering, dropped down to the lowest point known for years, and it might have been supposed that Canadian competition was to be a thing of the past. But, given fresh courage by the removal of the one dollar a thousand duty provided by the McKinley bill, an increase began to be seen.

Notwithstanding the fact that the consumption was tremendously curtailed throughout this country, that the United States has not in any twelve months since June 30, 1893, consumed to exceed 75 per cent. of its annnal consumption for several years preceding the panic, the Canadians have continued to gain. Mills have been erected on Canadian soil, and during the year ending June 30, 1896, importations of boards, deals, planks, etc., from Canada amounted to 786,209,000 feet, valued at $8,505,634. The first three months of the present government fiscal year showed importations of 225,396,000 feet, which, if maintained for the year, would bring the aggregate to much the highest point ever known.

It would be instructive to know the precise magnitude of the American demand for lumber, but let us estimate the requirement for lumber with which the Canadian product comes directly in competition—such as white pine, yellow pine, hemlock and spruce—at sixteen billion feet in 1892, and twelve billion feet in 1895-96 ; and we find that Canada in the former year furnished about four per cent. of our supplies, and in the latter about six and one-half per cent.—a comparative increase of five-eighths.

Messrs. Judson and Defebaugh were appointed secretaries of the convention, and upon motion a permanent committee on organization was appointed. It was stated that those present represented 7,805,000,000 feet of the annual production of lumber. Communications were then read from a large number of manufacturers and lumber associations expressing their sympathy with the movement for the re-imposition of the duty, which was in most cases placed at $2.00 per thousand.

Mr. Silas W. Gardner, who is interested in both yellow and white pine, spoke at some length, advocating that a duty of $1.00 per thousand feet be imposed on rough lumber and timber, and $2.00 upon all dressed or re-manufactured lumber. Such a duty would realize a revenue for the government of one million dollars, while it would not be sufficient to shut out much of the Canadian product, but would protect the market from becoming demoralized.

Mr. H. E. Foster, of Washington, referred to the competition from British Columbia. The manufacturers there had quite an advantage in being able to ship their lumber in foreign ships to American ports, by means of which they were often enabled to get very cheap rates. Canadians had also an advantage with respect to stumpage, as they had no taxes to pay, the land reverting back to the government when cleared.

Several other delegates expressed their views, advocating a duty of not less than $2.00 per thousand feet, and the Committee on Permanent Organization reported, recommending the appointment of a ways and means committee to establish such legislation as is considered in the best interests of the lumber trade, also the appointment of a committee on resolutions, to be composed of five members. Mr. C. W. Goodlander, of Pennsylvania, was elected president of the ways and means committee. Other speeches followed, and Mr. W. B. Mershon, of Saginaw, made the the following report for the committee on resolutions :

Whereas, The placing of lumber on the free list by the existing tariff law not only promotes ruinous competition on lumber from Canadian mills, but discriminates against lumber as compared with other manufactures. Therefore, be it

Resolved, That this convention representing the entire lumber industry of the United States in all lines, respectfully petition congress to place lumber on the dutiable list. And be it further

Resolved, That each lumber dealer in the United States be urged to furnish to the senators of his state, and to the member of congress from his district, full information in relation to the needs and condition of the lumber industry, to the end that they can consistently assist in the passage of this measure. Finally

Resolved, That this convention recognizes the fact that unjust discrimination prevails in some countries in South America and elsewhere, as against American lumber, and that we are entirely opposed to such unjust discrimination, and we invoke the aid of the United States congress for the purpose of removing the same, either by reciprocity or otherwise.

Mr. G. W. Hotchkiss, of Chicago, gave an animated talk on the value of lumber and the effect of importations. He had commenced his lumber business in Canada, buying common lumber for $3.00, fourths for $7.00, and the three uppers for $14.00. This was about forty years ago.

The chairman made a few remarks and adjournment was announced, after which a meeting of the Ways and Means Committee was held. In the evening a banquet was tendered the visiting delegates.

### WELL PLEASED.

MR. D. P. Sicklesteel, McGregor, Ont., having recently sold out his business, requests that THE LUMBERMAN be discontinued, and adds : "Am very well pleased with THE LUMBERMAN, and would continue to take it had I not sold out."

### THE LUMBERMAN FILLS THE BILL.

The Napanee Pulp and Paper Co., Ltd., of Fenelon Falls, Ont., write : "It is with pleasure that we hand you settlement for our 'ad' in THE CANADA LUMBERMAN, as the results have been very satisfactory indeed."

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## "ONE LEADER."

BARRIE, ONT., Nov. 25th, 1896.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—Now that McKinley has been elected, and gold declared to be the leading metal, from every nation and point of compass is heralded the news of general satisfaction and restoration of confidence; resulting already in furnishing employment to over one hundred and fifty thousand of idle artisans. The election has developed that the people only require one metal as a leader—and that is gold. This decision is, I believe, in accordance with the original Designer from the creation up to the end of time—that there should be only one leader in anything, whether of nations or societies, mineral, agricultural, forest, or any other product—only one leader of its class can successfully exist. And the moment two leaders are given equal power, the seed of discontent is planted, the growth of which will in time be destroyed by its superior. White pine, like gold, is the leader.

With gold as a foundation for all obligations, coupled with a permanent advance in mineral lands, wheat and all other agricultural products, a reason is furnished to anticipate an increased demand for the goods supplied by the manufacturer which will set in motion the wheels of commerce, the effect of which cannot be otherwise than beneficial to the lumbering industry. But as to the general revival of trade advancing the price of lumber, say one dollar per M feet mill run, this will largely depend upon the lumbermen themselves and the banks that supply the funds. If the lumbermen produce an excessive quantity in the future, as they have in the past, and then force it upon the market (as many will) —two million feet when only one million is required—then I fail to see that the result in price will follow beyond a moderate advance over dull time prices. With the competition that exists from whitewood, pine timber, flooring, ceiling, box lumber and shingles from the Southern States, and cedar, redwood, Douglas fir and shingles from British Columbia and Washington territory, and the manufacturers of these exercising the same fault of forcing double the quantity upon the market that is required, the result will be in order—to find their gain. It would require a one stamp gold mill with latest improvements, also a lightning calculator with a powerful magnifying glass, to discover a small speck of profit—after paying interest, insurance, and depreciation of property and expense of manufacturing, which is the smallest, most economical and hardest earned of all.

The moment there is a permanent advance in lumber or grain the railroad companies claim they have a "title deed" to it from the Crown, and advance the rate accordingly—they claim it is fair to allow you to hold the "title deed" to the ground, and they a "deed" to the profits therefrom, as they do not want the earth, only results—for which they "draw" to secure.

There is no doubt but that the retail yards in the United States are all carrying small stocks, but the demand corresponds with the amount of small stock carried. Now, where is the lumber if not in the retail yard? You will find millions upon millions at Buffalo, Tonawanda, Chicago and other wholesale yards, and at the mills in Canada, Michigan, Wisconsin and other states, hundreds of millions of '94, '95 and '96 stock, all ready to ship, and millions more to be manufactured, with 1897 cut to follow. The effect of this will be to check the advance in price that should take place.

Canada owns billions of white pine standing timber, and for want of appreciation or realizing its value an annual destruction of millions is going on, resulting in a loss to all interested.

I know of only one way to advance the price of lumber to a paying basis, and that is to manufacture no more than the demand requires, but who can stop the "Niagara" or the whirlpool below?

The lumber manufacturers are "in it"—the loss; the railroad companies are "in it"—the profit; the government are "in it"—destruction of timber.

Yours truly,

C. H. CLARK.

[The above letter was written for our December number, but was received too late for insertion.—THE EDITOR.]

## THE DUTY QUESTION.

MONTREAL, 25th Nov., 1896.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—In reply to yours of the 10th inst. would say, that although a protectionist president has been elected in the United States, I cannot believe that the duty on lumber going there will be re-imposed, for the following reasons: The great bulk of the people of the United States being consumers, their interests will be considered rather than that of a few lumbermen who represent but a small portion of the people and who have really a monopoly of the business, as the principal part of the timber lands are comparatively in the hands of a few operators who can control the output if they will; but the apparent disposition of most lumbermen is to get rid of, as fast as possible, what standing timber there is left and let the future take care of itself. Then the fact of so many Americans being so largely interested in our mills and timber lands, will naturally influence them to oppose any legislation that will debar them from getting our pulp wood, logs and lumber, which they see the necessity of having to keep their paper mills working, and the refuse of the logs to make their salt. The Titabawassy, the Cass and other rivers that once furnished this material are almost denuded of their pine, and it is doubtful if Michigan, which once made four thousand million feet of lumber in a single year, produces half that quantity at present, even though it is of a very inferior quality. There is still some good timber in Michigan, but it is in very few hands.

Last year there was taken across the Georgian Bay and Lake Huron to that state some three hundred million feet of pine logs to keep their pans and mills going. Saginaw, Alpena, Muskegon, Grand Haven, and other centres of the great lumber industry, will, if something else does not turn up, be places of the past. Then, again, if our American friends should revert to the import duty on our lumber, we would, of necessity, reimpose the export duty on logs and pulp wood going to the States, resulting in what I think would be contrary to the interests of both countries.

In reference to the outlook for the coming year's business, I think it is good. The American market during the past year has been very quiet, while the English trade has been good, most every kind of lumber being in demand, particularly waney board timber and spruce deals Had it not been for the high rates of freight prevailing in the fall, much more of the latter would have gone forward; in fact, had it not been for the British market the past season, many of our lumbermen would have run their mills on short time. The outlook for next year's business is promising, the cut of deals being all sold.

Yours truly,

J. K. WARD.

## INFORMATION WANTED.

SCOTSTOWN, P. Q., Dec. 16th, 1896.

To the Editor of the CANADA LUMBERMAN:

SIR,—I wish to transmit about eight horse power a distance of about 1,500 feet from a water wheel, which I can do by using an electric motor, but that is expensive.

I have been thinking that I could connect an air compressor directly to the water wheel and carry the air in steam pipes to the place where the power is required, and use an ordinary steam engine. There is only one difficulty I see in the way, that is, to keep the engine from heating. Perhaps some of your readers have had experience with this kind of power, and can give me some light on the subject through the columns of THE LUMBERMAN.

Yours truly,

C. H. PARKER.

[It is perfectly feasible to transmit the power by means of a compressor and a steam engine as you propose. There is no difficulty about the heating. The cylinder of course would need oiling, but the principal difficulty that has been found has not been the heating but the cooling, as the air expands when released from the engine and usually produces frost. The method of transmission by compressed air has a good deal to be said in its favor, but in this individual case we are of the opinion that the cost of the apparatus, namely, the compessor and the engine, would be considerably more than the cost of the electric outfit.—ED. LUMBERMAN.]

## KEEP ON ADVERTISING.

No business man not yet dead in the shell but can see even in dull times an opportunity to let the world know that he is alive. In advertising one's business it is perhaps three times out of four a blind and fatal mistake to leave the public in the dark as to whether the factory is still running and the owner thereof alive or dead. No industry that is not overdone or wrongly located can be effectually downed by a spell of depression. Consumers do not quit the world as some gentlemen did in the days of Noah, and if unable to purchase what they need to-day, the same need speaks for itself to-morrow. When the wind is low, mend your sails, and the man who is prepared for the breeze is the man most benefitted by the same.—Power and Transmission.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

C. H. MORTIMER
PUBLISHER

CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### TO VISITING LUMBERMEN.

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## 1897.

STANDING on the threshold of a new year, the portals of which are about to swing open to us, we cordially extend to readers of THE LUMBERMAN the wish that 1897 may bring to them in satisfying measure happiness and prosperity. There's no denying the fact that business conditions have not been to our liking for several years past. In consequence most of us have thought that we had good cause to grumble, and have, perhaps, exercised our prerogative a little too freely. Our grumbling has not improved matters—on the contrary it has probably been a more or less potent influence in the other direction. On the principle that misery loves company, we have had the satisfaction of knowing that our neighbors across the border were being pinched harder than ourselves.

In spite of hard times, however, our exports of lumber and timber products of various kinds were considerably in excess of any previous year. So far as the United States market was concerned prices ruled very low, but European transactions brought satisfactory profits.

Speaking generally it can be said that the outlook for the new year is an encouraging one. A feeling of hopefulness, which has been lacking for several years past, now pervades the business community. This of itself must exert a powerful influence in setting the wheels of enterprise in swifter motion, creating a demand for lumber and other lines of material. The satisfactory price which has been reached and is being maintained for wheat is a mighty factor in bringing about good times in an agricultural country like Canada, and affords a solid basis upon which business men may build their hopes.

The CANADA LUMBERMAN would like to see every lumberman as well as business man in every line, put a cheerful courage on, get his shoulder against the wheel of the car of progress and assist to give it a momentum that shall continue throughout this and many future years.

The attention of our readers is called to two new features which appear for the first time in this number of THE LUMBERMAN, viz., a department for Retail Lumbermen, and a Wood Pulp Department.

The retail lumber trade of Canada is deemed to be sufficiently important to warrant us in giving it in future a greater amount of attention in these pages that it has heretofore received. We hope to have the encouragement and assistance of the retail lumber merchants throughout Canada in the effort we shall make to impart interest to this new feature of the paper.

The wood pulp department has been established owing to the close relationship existing between the lumbering and pulp manufacturing industries—many of our lumbermen being owners of pulp wood limits as well as investors in pulp mills. The relationship thus existing between these industries should render this department of interest to both lumbermen and pulp manufacturers.

## OUR RELATIONS WITH THE UNITED STATES.

FOLLOWING the election of Major McKinley to the Presidency, the lumber manufacturers of the United States, particularly those of the Southern States, are reviving the agitation for the re-imposition of a duty on Canadian lumber. We print elsewhere an account of a recent meeting held at Cincinnati to discuss this question. The enterprising publishers of the Chicago lumber journals and other gentlemen delivered eloquent speeches in which the woes of the American manufacturer were skilfully painted in becomingly sombre hues. It is not the usual custom of our American friends to attach much importance to Canada. They are accustomed to say, when Canada is mentioned, "Canaday—where is Canaday, anyhow?" It is rather amusing, therefore, to see the representatives of the greatest American industry appealing to their government to save them from destruction at the hands of the Canadians. Candidly, we think our American friends are acting on this occasion in a manner altogether inconsistent with their usual practice, and are making much ado about nothing.

Purposely, no doubt, they present to their government but one view of the situation, and that the one most favorable to themselves. They admit that the lumber imported from Canada constitutes only about one-sixth of the total amount placed each year on the American market—or in other words, about two-thirds of the total yearly receipts of lumber at the city of Chicago alone. It is a well-known fact that a considerable part of the lumber imported from Canada, is exported by the American buyer to his foreign customers and therefore does not come into competition in the home market with the product of American mills. We presume that should an import duty be imposed, there would be a rebate of duty on such lumber as could be shown to have been bought for and exported to foreign markets. There would also be a rebate granted to box manufacturers on all lumber brought in from Canada for use in their business. Deducting the total amount of such rebates, the revenue which the American government would derive from a moderate duty would be trifling indeed, and the benefit which would be likely to accrue to the American lumber manufacturer from shutting out say 25 per cent. of the Canadian exports, would be correspondingly small.

The American government should and doubtless will consider whether it is worth while to disturb the present trade relations of the two countries—the advantages of which are reciprocal—for the purpose of conferring a trifling advantage upon a particular class, largely at the inconvenience and expense of the consumers, who, in point of numbers, are as 100 is to 1. The advantages of the present arrangement are, as already stated, reciprocal—notwithstanding the efforts of the speakers at Cincinnati to make it appear that Canada gets all the benefits. In exchange for the free admission of our lumber to the American market the owners of the largest mills in Michigan and Wisconsin are permitted to export from Canada, free of duty, the timber necessary to keep their business in operation. Were this privilege to be withdrawn, these extensive mills would be obliged to close down, the capital invested in them would be to a large extent destroyed, thousands of workmen would be permanently deprived of employment, and cities like Saginaw and Bay City, which are dependent upon lumber manufacturing, would be ruined.

Again, under the present arrangement the owners of pulp mills in New England are allowed to carry immense quantities of pulp wood out of New Brunswick each year free of duty. The withdrawal of this privilege would certainly entail inconvenience and loss upon the owners of these mills, and in many instances, no doubt, would lead to the removal of American pulp mills to Canada. Our American friends should endeavor to take a broader view of this question, in which case they should be able to see that it has many bearings, and that the interests of both countries would probably be best conserved by leaving the tariff unchanged. Taking into consideration the fact that the principle at stake in the late Presidential election was that of a sound as against a debased currency, and that the President elect received substantial support from a strong section of the Democratic party, the probability of the protectionists being able to carry such a measure as the American lumber manufacturers desire is at least doubtful. In this connection we desire to express our satisfaction with the proposal that has recently been made that the Canadian government should arrange to have a permanent representative of the Dominion at Washington to facilitate negotiations and promote satisfactory relations between the United States and this country.

## EDITORIAL NOTES.

THE Board of General Appraisers at Washington have just rendered a decision in the important question of the valuation of wood pulp, by which is determined the amount of duty to be paid by Canadian manufacturers shipping to the United States. Heretofore the Government valuation has been $12 per ton, but at the suggestion of Treasury Agents Wood, of Detroit, and Stokes, of Plattsburg, N. Y., an appraisement was made, the decision being that the valuation should be placed at $11 at the point of manufacture.

The Mississippi Valley Lumberman's Association has announced an exposition of lumber grades to be held in Minneapolis this month. It is intended as a means by which manufacturers, wholesalers and retailers may inspect and become acquainted with the standard grades, and as such it should prove of great interest. There will be exhibited in a suitable building, provided for the purpose, from 75,000 to 100,000 feet of lumber. Canadian lumbermen will learn with surprise of the attention given to the question of grading by this association.

A STRONG argument in favor of holding firmly to prices is found in the published statement that the manufacturers of red cedar shingles have so reduced prices as to make their product unpopular in the eastern markets. Following the reduction in price, an attempt is said to have been made to produce the shingles at a less cost, and consequently the quality has deteriorated and the product become unpopular. Owing to the lack of anything like a standard grade or price, dealers also feel a delicacy about making purchases, lest their neighbors should undersell them. To retain the eastern trade the manufacturers of red cedar shingles must study the market more closely.

ONE of the essential features in the production of a first-class trade journal is that it should contain the views of those in whose interest it is published. When important questions are under consideration, readers naturally look for the opinion of others engaged in the same line of industry. During the past year the CANADA LUMBERMAN has received contributions from a number of its subscribers, to whom we are deeply grateful. In the year 1897 it is hoped that many more will assist in increasing the value of the LUMBERMAN by expressing their views on subjects relating to the lumber trade, as well as by seeking information through its columns. The publisher is always pleased to hear from subscribers. Let one of your New Year resolutions be that you will write more frequently to your trade paper.

MENTION was made in these columns a few months ago of the fact that the vessel in which Dr. Nansen attempted to discover the north pole was made of Douglas fir, and that it had been subjected to great pressure among the ice floes. Further corroboration of the strength of the vessel is given by Dr. Nansen, who states that when the pressure was at its height, her beams and timbers began to crack; she broke loose and was slowly lifted up out of the icy berth in which she had been fast frozen, but they were unable to find a single crack or a splinter displaced. This proves the immense strength and elasticity of the Douglas fir. In this connection we note that expert testimony before the Behring Sea Commission at Victoria, B. C., affirmed the fact that Douglas fir was far superior for purposes of shipbuilding to Oregon pine, the only article of lumber that is in any way to be compared to the product of British Columbia.

THE subject of business courtesy is one to which greater attention and study might profitably be given in this and other countries. The indifference and lack of courtesy shown to representatives of business houses by those holding responsible positions is often such as to cause astonishment, and the person who has sought an interview is made to feel that he is regarded as an intruder. An instance of this was recently brought to our notice. A representative of a European house called upon a prominent manufacturing firm in Ontario and was treated with such indifference as to be at a loss to understand the situation. He afterwards expressed the opinion, in which we entirely concur, that such an attitude was not only injurious to the particular industry with which the firm in question were identified, but to the country at large. Particularly in a young country such as Canada, the aim of every business man should be to establish our reputation as a courteous and hospitable people, always willing to extend the hand of friendship to visitors from abroad. Thus Canada will be looked upon as a desirable country in which to reside, and the increased population which is so necessary to our welfare will be attracted to us. It costs nothing to treat your fellow-beings civilly, and the results are invariably profitable.

## ENGLISH TERMS AND MEASUREMENTS.

BELOW will be found some particulars regarding English terms and measurements as furnished to us by one thoroughly acquainted with the English trade which will assist our readers to a better understanding of the English market. In the article which we reproduced last month from the Tradesman there are said to be several inaccuracies.

Lumber in Great Britain is spoken of as timber, the only exception to this rule being in the case of hardwood lumber imported from the United States, which is spoken of as States lumber.

The term yellow pine in England is synonymous with the white pine of Canada, while the yellow pine of the Southern States is designated pitch pine.

Round timber in England has formerly been measured to find the cubical contents by the quarter girth by what is called the "Hoppus' system," in which the devisor is 144, but of late years it has been discovered that this devisor gives 27 per cent. less than the actual contents when used for measuring round timber. The Customs Find Timber Measuring Department now measure round timber by the quarter girth and use the 113 devisor, but if the timber is measured by calliper, or by the diameter, the devisor used is 183, which gives the true content.

Sawn timber, such as deals, battens and boards, or "lumber," as it is called in Canada, is imported by the St. Petersburg standard hundred. The standard St. Petersburg deal is 12 feet in length by 1½ × 11 inches. The standard contains 120 pieces, or 6 score to the hundred, which is equal to 1,980 feet of 1 inch boards. To this measurement every size and dimension has to be reduced. In London and Ireland, however, there is another standard which is used principally for retail transactions, and which is 120 pieces 12 feet by 3×9 inches, equal to 3,240 feet board measure.

Planed or dressed wood, such as flooring and matched boards, are imported by the St. Petersburg standard, but are re-sold in England by the square of 100 superficial feet.

Another measurement in England is the fathom, which is 6 feet cube, or 216 cubic feet. Lath wood, deal and batten ends, or as it is called in England, "firewood," is bought and sold by this measurement. Mouldings are sold by the 100 running feet.

Square timber is sold in the English market by the load of 50 cubic feet, equal to 600 feet inch board measure. The railway companies carry 50 cubic feet of fir timber to the ton, and 40 cubic feet of hardwood timber. Mahogany, cedar and furniture and fancy woods are sold in the log or in plank at per superficial foot of one inch thick. Hardwood boards or States lumber is now sold in considerable quantities to English merchants by the car load.

## BAND VS. CIRCULAR.

A SHORT time ago I asked for a discussion on the difference between the saw kerf of a circular and that of the band saw, or the gain of the band over the circular in amount and profit, writes A. Blackmer in the Wood-Worker.

By allowing a difference of one-eighth of an inch between the circular and band—that is, calling the circular 1 5-16 inches for the board and kerf, and the band 1 3-16 inches for the same—I find that the band will make 21 boards out of the same timber that the circular will make 19 boards from, making a difference of 2-19 in favor of the band; 2-19 of a day's run of 60,000 feet makes 6,315 feet, which at a moderate estimate of $10 per thousand, is worth $63.15, so that if there were no other items to consider, the band would have paid for itself in a very short time.

However, there are several other points to consider. In the first place, when the band averages 50,000 a day it is doing well, and so the sawing of this extra 10,000 a day which would be necessary to make its day's work equal to the circular in amount, at $2.50 per thousand equals $25, which must be charged to the band, and when taken from the $63.15 that it now has credit for leaves a balance of $38.15.

As a further offset, when there is a change to be made from a circular to a band, is the expense of making this change, including the enlarging of the filing room and new outfit for the same, and interest on the investment.

To recapitulate: The difference in saw kerf on which these estimates are based is probably not far out of the way. It is probably in each case about a 32nd of an inch more than the majority carry, but that does not materially change the result. It costs much more to keep a supply of band saws on hand and keep them in order than circulars. Just how to estimate some of these things is a little difficult without a demonstration by an actual account being kept.

# THE RETAILER AND Wood-Worker

## A WORD TO THE RETAILER.

IN this country there are two classes of retail dealers, the one conducting a strictly retail yard, and the other having in connection with his retail business a wood-working factory, by means of which he supplies dressed stock, sash, doors, etc., to his customers. This fact has suggested the change which has been made in the heading of this department, and while in the future the same attention will be paid to the wood-worker as in the past, it is hoped to present, also, articles of interest to the dealer conducting exclusively a retail trade.

Many millions of feet of lumber are consumed annually in building operations in Canada, a large portion of which passes through the hands of retail dealers, to whom manufacturers and wholesalers look for much of their Canadian trade. A close affinity, therefore, should exist between the manufacturer, the wholesaler and the retail dealer, and each should strive to promote the interests of the trade in general, by according to each branch its rights. To make this department beneficial in advancing the interests of the retail dealer is one of the objects desired, and to attain this the assistance of every dealer throughout the country is solicited. Contributions on any subject of interest to the trade, whether local or general, and discussion on the methods of executing work in the planing mill, are invited. This is the Retailer's Department, and we trust the retailer will assist us to make it of the greatest possible service.

## SUGGESTIONS FOR IMPROVEMENT.

WHILE the lack of organization in the lumber trade of the Dominion is strikingly manifest by comparison with other countries, it is creditable to the retail trade that the only association which can fairly be said to be in active operation is the Western Retail Lumbermen's Association of Manitoba. Nearly every retail dealer of the Northwest has his name enrolled on the membership list, which also includes the manufacturers as honorary members, thus assisting in a better carrying out of the objects sought. Since the inception of the association dealers have been enabled to maintain fair prices. While cutting has been avoided, the consumers have not been called upon to pay exorbitant figures. There is certainly much to be said for and against the perpetuation of combines. There always has been, and perhaps always will be, strong opposition to their existence, but any arrangement that will secure to the manufacturer a reasonable return for money invested, and prevent him from sinking into bankruptcy, bringing loss to the community in which he resides, must, we think, be looked upon as serving a desirable purpose. This the Western Retail Lumbermen's Association are striving to do, and what can be done in one section of country can be done in another. It might not be perfectly feasible for the retail dealers of Eastern Canada to organize on their own account, but they might become a branch of a manufacturers' association if such existed, and work in harmony therewith. In the United States there are a number of retail associations, which have proven to be of great assistance in maintaining the trade on a profitable basis.

* * *

THE lot of the retail dealer in many parts of Canada has not been a happy one during the late period of depression. In British Columbia his condition has been improved by mining operations, and in the Northwest the advance in the price of wheat has had the effect of creating considerable trade, but in Ontario and Quebec less favorable conditions have prevailed. Upon the building trade largely depends the business of the retail lumber dealer, and unfortunately, the two largest cities, Toronto and Montreal, have just passed through a period of severe depression. Dropping into the office of a retail dealer in Toronto, the writer inquired how the past year's business had compared with 1895, and was told by the proprietor that he had adopted the policy of selling for cash only, and this, of course, had restricted his trade, but until the books were balanced for the year he could not say just how he would stand. He said, however, that the past few years had been a period of enduring expectation, and they were just hanging on awaiting the return of better times. The wisdom of conducting a cash business is not to be doubted, although it is sometimes very difficult to do. Bad debts are the bane of many an otherwise promising business, and liberal credit opens the door to the unscrupulous contractor to evade payment for his goods. The refusal of credit to builders would have a tendency to weed out the weak contractors, and thus place the retail lumber trade on a stronger footing.

## CONDITIONS NECESSARY TO SUCCESS.

FOR a long time the planing mill business has been one of very close competition, for which state of things mill owners have only themselves to thank. A great percentage of them are troubled to-day to know how to make ends meet on the last day of 1896.

The proprietor or manager who always comes in an hour or two late, sits down, puts his highly-polished boots up on the desk, there to remain until he has posted himself fully on horse racing and base ball matters, and smoked his cigar, leaving his correspondence and business—that should receive his first attention—till the cigar and sporting news are fully digested, is nearly always in trouble, as well as those who wait daily in their offices for the clouds to roll by, never making an effort to look up a job, and only getting what falls on their plates without any efforts on their part. If work is to be had you must hustle around and get it. If you don't get a car load get half a car load; hustle around and get your share of what is to be had.

The owner or manager should be at his place of business the first one in the morning and arrange business for the day. See that your foremen have everything properly arranged for the day's work, making necessary suggestions and having a good understanding about the work. Nothing pays better than this "entente cordiale." It makes things work smoothly—like riding along in a nicely-oiled carriage instead of one that squeaks and squeals all the day through. The proprietor should not only be there first, but should remain till the last and see what has been done and what left undone; often what has been left undone is of more importance than that which has been done.

Because you are proprietor or manager is just the reason why you should be right around among the men and machines, especially in close times like the present. It is necessary at all times to keep an eye on the material that comes into the mill. See what it is and how it is handled. It is wrong in principle to go along from year to year in an old beaten way that you have always been used to. You must from time to time look into new ways of doing things and see if there is not a better, cheaper and quicker way to do work.

It is not always machines that need improving. There is often as much saved in handling stock as the percentage of profit you hope to make on it. One concern may underbid another and make a good margin of profit just from a better and easier way of handling the stock. This stock handling is a stumbling block in the way of many an otherwise enterprising business concern.

You go to a mill and see men passing up one board at a time through a scuttle, that thing being repeated every day. It doesn't need a demonstration to show they are liable to have hard times there. They are slow coaches. Get some kind of a lift over that hatch, if it is only a simple hatch over a drum; hitch steam to it and instead of putting up one board send up a thousand feet. I see every day men carrying one board at a time from scows on to a wharf, and if the stuff is heavy, two, three and sometimes four men to a plank or stick of timber. Away up the wharf they go with it about as they would go to a funeral. Not that the men don't work hard enough. We all know it's hard enough to carry this stock up the wharf, and it's slow enough too. There needs to be some enterprise and some go-ahead; instead of one piece at a time going ashore, a steam crane should put a thousand feet ashore and a traveling crane or car carry it up the dock. Does any one wonder that this concern is in the hands of a receiver?

Numbers of owners and managers think it is beneath their dignity to get out and dig into their work, preferring to entrust it to some kind of a foreman. Business is business, and if you

are going to make anything out of it, you must get into it with your whole life and soul. No business ever succeeds if handled with the tips of one's fingers. Everything must be made to count on the profit side, even if it is only on a small margin.

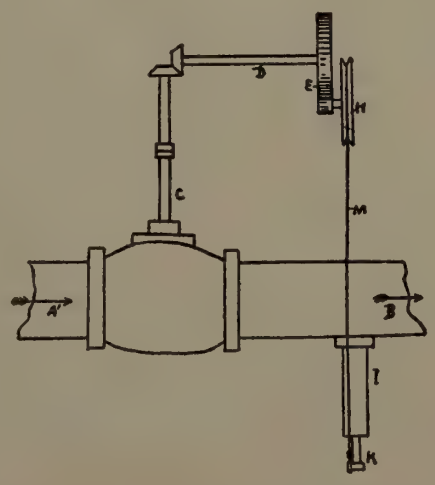
Not a great while ago our mill figured on a job of 200,000 feet of 3 × 12 planks, but lost it by fifty cents a thousand. The firm that got the work failed before the stock could be delivered and we got the job at our own price. This was the method of the concern that figured against us, and as it is always the last ounce that breaks the camel's back, this little job tipped them over. You can not figure too closely on work where you have a solid half dozen figuring against you, and when you get the work you must go in to win. Every available point must be taken advantage of; not the least item must be lost in handling. Keep it moving, so the machine need not wait for it one minute; keep the machines drawing it through. Here's another place where a great many lose money—taking away from the machines and loading. If the order is a local one, of course in most cases you expect to lay it down so teams can haul it away, but if it is to be loaded on cars or on board a vessel, there should be no waiting. Keep it moving along out of the way, by power if possible. Study up some plan by which you will be able to move it quickly and easily. Machine work counts, especially on heavy jobs. Where you want to load a car every three hours you must figure close on the minutes. Ten minutes lost here and ten minutes lost there, soon count up into hours; the hours and minutes lost can never be recovered.

To run things closely does not mean that it is advisable to rush. The rusher more often than otherwise loses his head and either has a break-down or makes a mistake and has to do part of his work over again, which hinders instead of hurrying the work on hand. It is a steady, strong, continuous pull that pushes work along; every man at his place and doing his earnest, honest best. There are times when we must carry sail to keep off a lee shore, and with the hundreds to-day who are carrying heavy sail, let me say, keep things close. One wrong move may tip you over. Every minute must count.

Recent political events lead us to hope for better times. Whether we get them or not the principle is the same. Our business is never boys' play and always needs constant care and close attention.—Jonathan Torrey, in the Wood-Worker.

## REDUCING VALVES FOR STEAM HEATING.

A GREAT deal of steam is lost by escaping through the valves, which conduct it to the various points in use in the mill, when not needed, due either to the valves being carelessly left partly open or to a disordered state of the valves, whereby they leak when closed. This occasions a waste of steam. The waste of steam in a heating system for the mill is almost proverbial. In steaming stock there is waste. Some of this waste comes about by the workmen leaving the steam on. If more steam is used than is necessary the excess simply passes off and escapes with the vapor. Steam at five or ten pounds pressure is for nearly every purpose as good for heating as steam having the full boiler pressure, provided in cases of heating liquids or boiling the supply pipes are made of sufficient area to transfer the low pressure steam; and provided in cases of heating by pipes and other surfaces the area employed is enough larger than it would be if high-pressure steam was used to provide for the reduced difference of temperature. We have frequently seen instances where the quantity of steam used for heating was largely reduced by simply closing down the main valve at the boiler which supplied the heating steam, so as to shut away from the heating apparatus the full boiler pressure, and this result is brought about by reducing the quantity of steam which before was used carelessly. Something can be done, however, in preventing unnecessary waste of steam generally by introducing between the boiler and the main supply pipe a reducing valve capable of easy adjustment, so that the pressure of the boilers can be held back from the system of pipes and valves in question. The main lines of supply pipe are naturally made of sufficient size to carry all the steam that may be needed. The reducing valve is an essential factor in this connection, but we present herewith a home-made contrivance which any man can make and adopt. It has saved us much steam, as it is self-governing and allows only a uniform quantity of steam to pass. The steam enters at A and goes out at B. Fasten an extra shaft C to the valve and arrange it to be turned by the gearing on shaft D, as shown in illustration. Then cut a hole in the pipe and insert the tube I. This tube is fitted with a plunger K, so that the higher the pressure of the steam the further down will it go, carrying the cord M with it, and as the cord goes over the groove in the pulley H, the latter is turned, and in turning of course revolves the gears E, thus closing the valve. When the steam pressure runs low, a spring on the plunger causes the latter to move upward, and a weight on the other end of the cord makes the latter act the

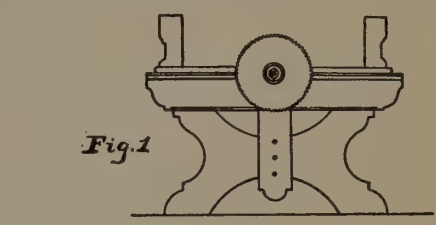


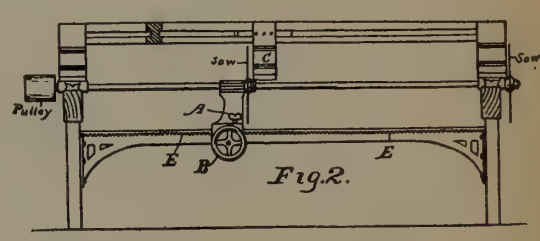
reverse upon the gearing and open the valve, thus admitting more steam. With such a device steam of much lower pressure will easily find its way to the point of use, and answer all purposes. So long as the pressure beyond the valves is high enough to do the work required of the steam, everything is obtained which could be wished. Variations in the adjustment of the valve will supply increased pressure, which, from time to time, may be called for. If the pressure is by this means kept down to the lowest point which will suffice to do the work, unnecessary use of steam through the carelessly-left-open or leaking valves will be avoided. The reduction of pressure in this way will often secure a noticeable economy in the use of steam in a mill or where live steam is employed for any work.—B. F. Fells, in Hardwood Record.

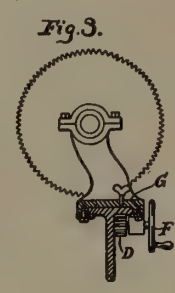
## CUT-OFF SAW.

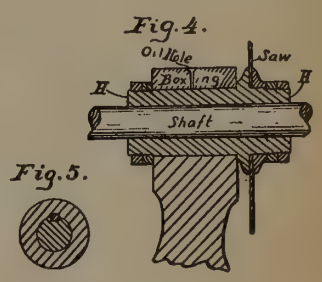
THE accompanying drawings show a double cut-off saw that is getting quite popular throughout Canada in small wood-working establishments. It is described by Mr. W. Welch as one that can be made cheaply by any machine shop. It is very easy to set for different lengths of stock, from a few inches to as many feet as the machine will take in. It is used mostly to take in stock 6½ x 2½ feet.

Fig. 1 shows end view. The carriage I, Fig.









1, is made of wood with V run-ways screwed on bottom. The legs and cross-piece are also made of wood. Fig. 2 shows front view. To set to different lengths of stock, loosen set-screw A, Fig. 2, and turn hand-wheel B, then move rest C, Fig. 2, up to saw.

Fig. 3 shows end view of attachment for moving saw back and forward. D, Fig. 3, is gear wheel to run in teeth as shown at E, Fig. 2. F, Fig. 3, is hand-wheel, and G is set-screw to hold attachment in place after the saw is set. H, Fig. 4, shows saw mandrel with double nuts at each end to fasten saw on and take up wear of boxing. Fig. 5 shows shaft with groove cut in for key in mandrel to slide in.

A patent has been granted to T. H. Madgett and William Crawford, of Burk's Falls, Ont., for a wood-working machine.

In the district of Semenovsk, where wooden spoons chiefly come from, about 7,000 men make a living at the trade. The spoons are generally made from birch wood, and a skilful workman can turn out several hundred a day. No fewer than 12,000,000 spoons are manufactured during the course of the year, which are sold at six to eight roubles per thousand.

# WOOD PULP DEPARTMENT

## THE MANUFACTURE OF PULP IN CANADA.

VIEWED from almost any standpoint, there appears to be a promising future for the pulp industry in Canada. The development during the past ten years, in the face of an import duty of ten per cent. imposed by the United States government on the manufactured article, has been such as to cause capitalists to look with favor upon that industry as a profitable field for investment, and the number of new mills now in course of erection, or contemplated, is evidence of its growing importance. An abundance of raw material, valuable water powers, efficient labor at an average cost—these advantages place Canada in a position to compete with any other country in the world in the supply and manufacture of pulp and paper.

At the present time there is a strong agitation in favor of imposing an export duty on spruce wood, which provides the main supply for the pulp mills. Such action on the part of the Canadian government would probably be followed by retaliatory measures by the United States government, and instead of the duty on pulp going to that country being ten per cent. of the value, as at present, it would likely be advanced to such a point as to practically close the United States market to Canadian pulp manufacturers. The effect of this would be, we believe, to stimulate the manufacture of paper in Canada, as well as cause manufacturers of pulp to seek new markets.

Our foreign exports of pulp already total up to a considerable sum annually, and information to hand proves that the industry is capable of much greater development. Denmark is now turning her attention to Canada for a supply of pulp wood, and if the raw material can be profitably exported to that country, there is no reason why the manufactured article should not find a market there, unless tariff duties should prevent. It is also learned that there has been a decided increase in the cost of logs in Norway and Sweden, which countries have hitherto furnished a large portion of the European supply, and as a result the price of pulp wood to English paper manufacturers has been increased. Thus a wide market would seem to be opening for the Canadian product, as no raw material suitable for the manufacture of paper is found in Great Britain.

The establishment of new mills will not, perhaps, meet with the approval of the proprietors of existing concerns, who may fear the effects of competition, but taking a broader view, and attaching due importance to the present outlook for an increased foreign trade, the demand would seem to warrant a considerable increase of production.

One drawback to the manufacture of pulp for export is said to be the excessive freight rates. On the highway of water communication through rates to the seaboard are equitable, but there is a lack of facilities for shipping cheaply from inland points. With the growth of the industry this will no doubt be remedied.

## PULP AND PAPER.

IT is estimated that 3,000 to 4,000 cords of pulp wood a day enters into the manufacture of paper in the United States. At the minimum, 3,000 cords, the total for a year would be the enormous amount of 900,000 cords. It is safe to call it 1,000,000. If this wood were piled in one continuous string, it would make a wall four feet wide and four feet high a little over 1,515 miles in length. It can be seen what a prodigious thing the wood pulp industry is, and at what a tremendous rate it is devouring trees, mainly spruce. Yet all this wood is converted into paper, which, after being used, vanishes from sight in a few days, and goes back to dust, out of which element the trees grow. The pulp business of this country is only a "patchin" to what the world can show. One mill in Paris annually imports about 50 ship loads of pulp wood from Norway and Sweden, and on the east coast of Great Britain and Scotland large quantities are imported every year. The mills of this country export a large portion of their output. During the week ending November 18, pulp and paper to the amount of $30,000 worth was shipped foreign from New York. Of the total $10,000 worth went to Melbourne, Australia, $4,725 to Mexican ports, $2,160 to London, $2,715 to Liverpool, $500 to Manchester, $3,578 to Wellington, $680 to Buenos Ayres, and about 600 to Hamburg. The exports of paper this year from this country have been greatly in excess of that of any previous year, amounting to $2,107,700 against $1,711,131 in 1895. For the month of September the comparative increase was 43 per cent. With this grand start in the business further increase may be looked for in the years to come. Verily the pulp and paper trade is a big thing, and spruce timber is strictly in it along that line.—Northwestern Lumberman.

## SISSIBOO FALLS PULP COMPANY.

THE manufacture of pulp in Nova Scotia has grown to be quite an important industry, and one of the largest establishments is that of the Sissiboo Falls Pulp Company, which is located on the Sissiboo, about eight miles above Weymouth Bridge. The company was organized in January, 1894, the capital being $30,000, held chiefly by American parties, Messrs. F. M. Steadman, the manager, and W. E. Palfrey, of Lawrencetown, being the only Nova Scotia shareholders.

The factory is built in the heart of the lumber country, which furnishes an abundance of raw material, which after being manufactured into pulp, is shipped chiefly by rail into Port Gilbert station. The works are operated by water power and lighted by electricity. The machinery is most improved.

The company owns two hundred acres of wood land of its own, but this is far from sufficient for the capacity of the mill, and every lumberman around sells his cut. They buy between one and one-half and two million feet each year.

Less than one hour is required for the transformation of a log of spruce wood into pulp. The wood best adapted for the purpose is smooth rounds of six inches diameter. The log is sawn into two foot lengths and has the bark removed by revolving scrapers. These pieces are then placed in the grinders, which are immense stones revolving at great speed. The wood is ground against the fibre, hydraulic pressure of 100 pounds to the inch forcing the stick against the stone until the last bit is ground up. It is very essential that these stones, of which there are three, are strong, for the strain is immense. As it courses through the grinder the wood, which is now a pulp, is mixed with water, to counteract the heat of the friction and to act as a temporary glue between the particles. It is then pumped up thirty feet into a long trough from which it is taken to the three wet machines. These machines resemble rude printing presses. As the porridge-like pulp passes through these it goes over a sieve which drains out the bulk of the water. The sheets which come out at the other end are then cut up into smaller sheets, aud placed in a hydraulic press for a final drainage of water. After leaving here the pulp is bundled into a machine similar to a hay press, and is now ready for shipment in 100 lb. packages. In twenty-four hours 40,000 pounds are manufactured. The output of the mill is sent largely to the American market, the sales being made through a Boston agent.

## PULP NOTES.

It is stated that the construction of a pulp mill at St. George, N. B., is under consideration by capitalists.

It has been decided to erect a pulp mill at Chicoutimi, Que. The shareholders of the electric light company are the promoters.

Mr. B. Wickett, of Sundridge, Ont., has been engaged to build a pulp mill at Sturgeon Falls, Ont., for Messrs. Heath & Paget.

It is said to be the intention of Messrs. Hamilton & Ayers, who are building a new dam across the North river at Lachute, Que., to build a large pulp mill.

The South River Mercantile Company of Manitoba have made a contract to supply 2,000 cords of pulp wood to an Ontario mill.

The cut of pulp wood in Maine and New Hampshire this winter will be larger than ever before. It is estimated that more than half the cut of spruce will be consumed in the manufacture of pulp.

Twenty-one cars of lumber, paper and pulp were recently shipped in one week by the Royal Paper Mills Company, of East Angus, Que. The company have recently received twelve carloads of paper machinery from Scotland.

Mr. Thomas Allison is said to have commenced an action against the proprietors of the Masterman pulp mill at Chatham, N. B., to recover the sum of $5,000 alleged to be due him for services in connection with the construction of the mill and in perfecting the manufacture of pulp. The works are said to have cost $100,000.

The American idea of concentrating the manufacture of pulp and of paper in one establishment is making headway in Germany. The manufacturers of sulphite pulp in that country have not found their industry very profitable during the past year or two, and they have been gradually turning their attention to the manufacture of paper, finding it easier to sell paper than it is to sell pulp.

It is said that the Glens Falls Paper Mills on the Hudson River, New York, the largest pulp and paper concern in the world, will in 1897 make 275 tons of finished newspaper per day. This will require at least 475 cords of spruce wood each day, or 142,500 cords in a year, a quantity equivalent to 90,000,000 feet of spruce logs. More than 80 per cent. of this spruce is of Canadian production, while the balance is cut in the Adirondacks. At the average of spruce growth in the forests of Canada or Maine, these mills will consume each year the merchantable product of 22,500 acres of land. Should Canada impose an export duty on pulp wood of $2 per cord, it would cost nearly $300,000 per annum over present cost to supply these paper mills with the requisite spruce wood from the Dominion.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. II. TORONTO, ONT., DECEMBER 30, 1896 No. 52.

**CANADA LUMBERMAN**

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber producrs at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year. $1.00.

**Lumbermen visiting Toronto are invited to call at the office of the CANADA LUMBERMAN. We shall have pleasure in giving them any information desired.**

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.

SHINGLE MILL—IN DRAPER TOWNSHIP—and limits; good opportunity for live shingle man. Apply to Box 26, Gravenhurst.

WANTED.

ONE TO FIVE CARS OF 2½" COMMON AND No. 1 and 2 Soft Elm. Send list, with price delivered on cars at Buffalo. BUFFALO HARDWOOD LUMBER CO., 940 Elk St., Buffalo, N. Y.

FOR SALE.

A QUANTITY OF WHITE OAK, DRY, 1 AND 2 in. and Bill Stuff, also Black Birch, 1 in., dry. Prices quoted on application. Send reference. E. & S. MALKIN, Orrville P. O., Parry Sound.

**FOR SALE**

A FIRST-CLASS TIMBER AND BOARD SAW-Mill in Tonawanda, N. Y.; fully equipped with 7-block Stearns Carriage 70 ft. long and 160 ft. track, Gang Edgers, Butters, Slashers, Steam Feed, and all the requisites of a modern mill; Engine and Boilers 200 h. p. Machinery in complete running order. Will be sold for removal if desired. For price and terms enquire of

J. & T. CHARLTON,
North Tonawanda, N. Y.

**LUMBERMAN'S INSPECTION BOOK.**

Send four 3-cent Canadian postage stamps for a copy of the LUMBERMAN'S VEST-POCKET INSPECTION BOOK, containing rules for the inspection of Pine and Hardwood Lumber in the leading markets of Canada and the United States.

**TWO SAW MILLS FOR SALE**

WE HAVE DETERMINED upon going entirely out of the Saw Mill part of our business, and therefore offer both our Band and Gang Ship Plank Mills for sale cheap.

Correspondence Solicited.

**THE CHATHAM MFG. CO., LTD.**

Chatham, Dec. 21st, 1896.

## CURRENT TRADE CONDITIONS.

ONTARIO

More attention is now being paid to balancing the books for the year than to selling lumber. Salesmen have been withdrawn from the road during the holiday season, while the buying by American houses has been of little account, as is customary at this season of the year. The volume of trade has, therefore, been restricted, and such orders as have been placed were for mixed lots. Just what the annual statement will show at the close of the year in comparison with last season it is hard to say, although there are some dealers who believe that the year will prove to have been unprecedented in the matter of small profits. This, however, is not the general opinion, and we would not be surprised to find the balance sheet in favor of 1896.

In another column will be found a report of the condition of the cooperage market, which indicates a great scarcity of stock at the mills, while only exceptionally favorable weather will permit of a sufficient stock of logs being obtained to supply the demand next season. There is also only a moderate supply of first-class shingles, but as the requirements for some time to come are not likely to be great, a scarcity will hardly be experienced.

QUEBEC AND NEW BRUNSWICK.

Many of the mills in Quebec have closed contracts with shippers for their entire cut of deals next season, and buying has been fully up to the average; in fact, there would seem to be a disposition to secure goods early, lest the firm position of the British market should cause a rise in lumber on this side of the Atlantic. The figures at which contracts have been closed have not been made public, but it is understood that in some cases a slightly higher price has been paid than last year, and it is quite probable that spruce deals will realize an advance in the British market in the spring. The figures given in another column of the stocks wintering at Quebec are interesting, and show that the supply in most lines of goods are very light in comparison with other years. Of elm there is only 78,374 feet, and it is possible that, with the active demand for shipbuilding, the end of next season may witness an absolute scarcity. At the mills throughout the province light stocks of spruce are held, and before the new cut is placed upon the market this supply will be further reduced. This has resulted in extensive operations in the woods, and indications point to a large season's cut of logs. The regular lines of steamers from St. John have taken part cargoes of lumber, which will reduce the stock considerably before the spring, much of which was held over owing to the high freight rates ruling late in the autumn season. Local and United States trade has exhibited little activity, and for the next few weeks a quiet market is anticipated.

BRITISH COLUMBIA AND MANITOBA.

The condition of the lumber trade in British Columbia and Manitoba is satisfactory for the season of the year, and the mills are mostly busy. The closing up of the year's business is engaging the usual attention, and it is believed that the season's trade will prove to be larger and more remunerative than that of last year. The foreign trade has been good, and mining operations have also assisted local business. Of the prospects for next year, the general opinion is very hopeful. The shingle industry shows little improvement, although some dealers report a slightly increased demand.

UNITED STATES.

The recovery from business stagnation which it was believed would follow the election across the border has been less pronounced than was indicated in the early part of November. For a time there were rumors of many new projects, and industries were said to be resuming operations all over the country. These projected works have materialized only in a very few instances, while the benefit derived from the confidence restored to industrial establishments has not been as great as was predicted. The return to prosperity promises to be gradual, there being much caution pursued in business circles. The closing of the year's business has had an effect upon the volume of the lumber trade, which has been restricted during the past fortnight.. Mild weather has permitted of building operations being carried on in many of the principal cities, a condition which has created some unexpected trade. From white pine centres, however, comes the one general report of light demand, coupled with the fact that dealers are holding firmly to prices and anticipate a fairly prosperous spring trade. The orders now received are mainly for mixed cars. In Michigan trade is fair, and in Chicago stocks are said to be much lighter than is generally believed, there being many broken lots. A good car trade is looked for at Albany, lake ports are quiet, and the Eastern States exhibit little life. Among the hardwoods ash, oak, poplar, basswood and birch hold the strongest position. There is also a fair demand for rock elm for bicycle rims.

FOREIGN.

The yard trade in Great Britain has quieted down owing to the holiday season, and very little will be done before the middle of January, by which time business will have again resumed its normal course. In the past fortnight there have been no auction sales, and this has resulted in more private buying. The building trade is, nevertheless, in a healthy condition, and the prospects for next year are considered favorable, although the high price of materials may result in some projects being deferred for a time. Shipbuilding is also active, and so far as can be foreseen at the present time the spring trade will open up with higher values. The low stocks will keep the market firm, even if sales are not abundant. At West Hartlepool sawn deals, battens, etc., are eagerly inquired for, and there is every appearance of an advance. Liverpool stocks are light, and in some lines it is difficult to fill orders. A quieter trade at London is reported, although some sales of 3rd Quebec 12/13 x 3 x 9 spruce have been made at £7 10s.

## SHIPPING MATTERS.

Steamer Mantinea has been fixed at St. John, N. B., to load deals for England at 45s. and timber at 22s. 6d.

The ship Kingsport, at Barbados, has been chartered to load pitch pine at Pensacola for Buenos Ayres at $11.75 (clean charter.)

Spring business from Montreal to London has been closed at 42s. 6d., and a steamer has been chartered from Quebec to United Kingdom, May-June sailing, at 41s. 3d.

The London Timber Trades Journal says: Forward chartering has begun, and it is reported that already 10,000 standards Quebec to range of ports is arranged at 42s. 6d., which means about 40s. to London.

## STOCKS AND PRICES.

### CANADA.

H. W. Marsh, of Stanhope, Que., intends taking out 5,000 cords of pulp wood this winter.

John Carew, of Lindsay, Ont., has closed contracts with jobbers for taking out stocks of logs in the districts south of Rosedale and Minden.

The cut of the St. Anthony Lumber Co.'s mill at Whitney, Ont., during the past season was about 40,000,000 feet. Since September operations at night have been suspended.

Messrs. J. & W. Flatt, of Hamilton, have sold their entire production of Michigan waney board pine and Ohio and Virginia oak to Messrs. Dobell, Beckett & Co., of Quebec.

Mr. Wm. Mackey, of Ottawa, is taking out his usual quantity of square and waney Ottawa pine timber, operations for which are now going on. This raft is taken out of the Amable du Fond limit.

Gilmour & Hughson, of Ironsides, have sold their 1897 cut of 3-inch pine deals to the McArthur Bros. Co., Ltd. Gilmour & Co., of Trenton, also sold to the same firm their next year's cut of deals.

James McGivery, of Stewartown, N. B., has purchased the McMonagle timber lands and will get out one million feet of lumber. David McAllister has contracted for 500,000 feet for James Doherty.

The Hale & Booth production of square and waney pine manufactured in Canada, estimated at about 200,000 cubic feet, for 1897 Quebec delivery, has been purchased by Messrs. W. & J. Sharples, of Quebec.

The log input on the Upper St. John and Miramichi rivers, in New Brunswick, will probably be from ten to fifteen per cent. greater than last year. Messrs. Kilburn & McIntosh will cut about eight million feet.

Operations on the St. Croix river, in New Brunswick, this season will be about the same as last winter. H. F. Eaton & Sons will bank ten million feet, F. H. Todd's Sons two million feet, while James Murchie & Sons will probably take out a smaller quantity than last season, which was seven and a half million feet.

The steamers from St. John have taken quantities of lumber for Great Britain. The "Alcides," for Glasgow, carried 250 tons of birch timber and 350 standards of deals; the Bengore Head, 500 standards of deals, while the Halifax City and Lake Winnipeg also took part cargoes of lumber.

A report from Ottawa states that a large lumber deal was closed at Pembroke on Saturday last, by which Mr. Thomas Mackey, M. P., and Mr. MacLaughlin exchanged limits. The steamer Ottawa was on the same day sold to William Murray, of the firm of T. & W. Murray, of Pembroke.

Robert Carson, of Garnet's Creek, N. B., will get out one million feet of logs this winter; the O'Neill firm and J. & J. McLeod, of Black River, two million and one million feet respectively; Robert More, of Loch Lomond, one million feet, while another million will be cut for the Ball's Lake mill. All of this lumber will be shipped from St. John.

### FOREIGN.

The Saginaw river mills manufactured the past season 57,000,000 pieces of lath, as compared with 83,000,000 last year.

The imports of hewn wood from Canada to Great Britain for the eleven months ending November 1st last were valued at £727,539, and sawn wood at $3,258,260.

The Traverse City Lumber Co., of Traverse City, Mich., have sold their entire output of hemlock for last season to Colburn & Co., of Michigan City, Ind. The quantity is 7,000,000 feet.

A report is current that the Weyerhaeuser syndicate, of Ashland, Wis., have purchased large tracts of pine lands in Northern Wisconsin, the consideration being in the neighborhood of $700,000. The report, however, lacks confirmation.

Messrs. Singleton, Dunn & Co. held an auction sale of Quebec timber and deals and pitch pine at Greenock, Scotland, on the 17th. inst. 20 logs Quebec oak (1,490 ft.) sold at 1s. 11½d., and 216 logs sawn pitch pine were hammered at 1s. and 1s. 0½d. These were put up without reserve, and ranged from 600 to 1,100 ft. per page. Several lots of 4th pine deals and ends were sold at 9½d. and 11d., and 11x 9x3 3rd pine at 11½d.; also several lots St. John spruce deals 11x3 at 10¾d. and 11d., and 17x9x3 at 10½d.

A comparative statement of lumber operations in Michigan, on both sides of the Saginaw river for a distance of 17 miles, and known as the Saginaw river lumber manufacturing district, shows that the product of the mills during the past season was 316,797,879 feet, the smallest record for the past thirty years. In 1894 the output was 481,244,039 feet, and in 1895 it reached 433,683,083 feet. The quantity of lumber on hand by manufacturers, exclusive of retail yards, is 217,498,058 feet, against 271,531,851 feet at the close of last season. The cut of shingles was 38,180,750, and the wintering stock is 11,925,250.

## QUEBEC CORRESPONDENCE.

J. Burstall & Co. handle Joly's cut of spruce deals for 1897, as usual.

Sewell's Lake St. Joseph, Jacques Cartier, and Rivierre Noire 3-inch spruce deals for 1897 are reported to have been sold to Harold Kennedy, as also Ross' Riviere a Pierre spruce.

Breakey's 1897 cut Chaudiere 3-inch spruce deals and Turner's Lake Edward cut have been sold to Messrs. H. R. Goodday & Co., who are also reported to have purchased the Rousseau 1897 cut at St. Anne de la Parade.

Messrs. H. M. Price & Co.'s cut of spruce for 1897 has been sold to Dobell, Beckett & Co.

The annual circular of J. Bell Forsyth has been issued, and contains the usual amount of interesting statistics. It states that the past season has shown a marked improvement in business with the United Kingdom, both in volume and results. The stocks wintering at Quebec are much smaller than last season. There is a notable increase in birch timber and spruce, while pine deals show a slightly larger stock. The following is a comparative statement:

| | 1895. | 1896. | |
|---|---|---|---|
| Square white pine | 1,090,892 | 537,013 | Feet. |
| Waney " " | 2,254,717 | 1,474 168 | " |
| Red pine | 153,520 | 82,069 | " |
| Oak | 750,486 | 637,348 | " |
| Elm | 228,870 | 78,374 | " |
| Ash | 118,327 | 42,694 | " |
| Birch | 5,156 | 9,470 | " |
| Tamarac | 6,590 | 90 | " |
| Spruce | 1,845 | 22,500 | " |
| Hickory | 17,721 | 6,185 | " |
| Cherry | 547 | 11,425 | " |
| Maple | ..... | 41 | " |
| Pine deals, merchantable | 118,789 | 124,215 | Stds. |
| " " cull | 16,700 | 18,195 | " |
| Spruce deals, merchantable | 651,479 | 524,634 | " |
| " " cull | 84,737 | 48,779 | " |
| 1 to 2 in. pine and spruce plank | 6,806,626 | 7,520,942 | Feet. |
| Pine and spruce spars | 113 | 110 | " |
| Hardwood plank | 40,000 | 103,964 | " |
| Hemlock and tamarac deals | 5,073 | 19,516 | " |

The figures given above are said to be quite reliable, except, perhaps, in the case of spruce deals, which does not include the stock at a number of the mills along the Lake St. John road, such as Roberval, Lake Edward and Lac Bouchette.

The figures with regard to export are also interesting, and show a considerable increase in several classes of stock. A comparative statement to December 1st is as follows:

| | 1895. | 1896. | |
|---|---|---|---|
| Square and waney white pine | 2,838,080 | 4,251,800 | Feet. |
| Red pine timber | 326,080 | 139,160 | " |
| Oak " | 869,560 | 1,382,880 | " |
| Elm " | 537, 20 | 501,000 | " |
| Ash " | 146,360 | 113,680 | " |
| Birch " | 200,160 | 319,200 | " |
| Pine deals | 501,200 | 400,343 | Stds. |
| Spruce deals | 3,471,700 | 3,828,258 | " |

QUEBEC, Dec. 26, 1896.

## THE COOPERAGE MARKET.

Messrs. Sutherland, Innes & Co., of Chatham, Ont., write of cooperage conditions as follows:

With regard to the present conditions of the cooperage trade, all we ourselves have to do is to simply sit in our office here and sell everything we have in sight. The fact is, we cannot begin to fill the orders that are sent in to us, on account of everything being pretty well cleaned up around the mills.

We had our purchasing agent out all over the cooperage districts in Ohio, Michigan and Indiana, but he failed to make any purchases worth speaking of for prompt shipment, or shipment before the new stock would come in, which will be in March or April. Owing to the immense apple crop and the unusually heavy run on flour barrels this season, everything has been pretty well cleaned up around the mills, and no stocks will be carried over into next season.

As regards the prospects for next year's business, we have made very heavy sales ourselves at $1 per 1,000 advance on staves, and a corresponding advance on hoops and heading; the advance, of course, is over the prices at which we booked trade for this year about the same time as this last year. From all appearances trade is going to be very brisk next season, and prices will be firm. Up to the present there has not been any winter to put in logs for the mills, and unless things change very materially, none of the mills will be able to stock up fully.

A good many buyers are holding off, expecting lower prices later on, but it looks to us as if it was going to be a case of first come first served, and those people who purchase now will be sure of a regular supply, while those who leave things over expecting a drop in price will not only be disappointed in not being able to buy cheaper, but they will run the risk of not being able to get the stock at all.

## AUSTRALIAN TIMBER REPORT.

Fraser & Co., of Melbourne, Australia, in their last monthly report, say:

The demand has not shown much improvement since the issue of our last report, though a better enquiry has existed from the country districts than was experienced in the previous four weeks, but the actual business concluded has not been equal to anticipations formed a few months ago regarding the prospective demand during the spring season. Increased consumption is probable, however, in the coming summer months, and as stocks on hand are not excessive for this period of the year, or shipments "to arrive" of any great magnitude, we look forward to purchases being effected on a somewhat larger scale ere the end of December and January next, while the fact of increasing f.o.b. and freight rates ruling at many ports from whence supplies to here are shipped, and laid down costs of the principal lines imported barely covering as against existing prices locally, should lead eventually to a higher range of values being quoted at this end; and more especially as there are indications of values generally abroad advancing still further, both in respect to first costs and freight rates. Where the improvement is most pronounced is in the home markets for Baltic supplies. With the exception of Oregon lumber, which remains steady at late shipping rates, nearly every other description of timber, as just mentioned, has advanced at the markets of export, and we consider we are therefore justified in taking the views we do with regard to the early prospects of values at this side.

SPRUCE AND BALTIC WHITE DEALS.—Imports: 855,489 feet super. Arrivals: Armadale, from Fredrickstadt, and City of Agra, from Metis. The City of Agra, with a cargo of Canadian spruce, is being offered at 2¼d. per foot of 9 x 3, and a small portion has been placed. Baltic white deals have been in small enquiry at a similar figure.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows Ottawa to Toronto, 10 cents per 100 lbs; Ottawa to Oswego, $1.90 per M ft., Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5c. per 100 lbs.; Arnprior to Montreal, 7c. per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts per 100 lbs. Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway have been made a fixture, as below. Of any intended change due notice will be given lumbermen.

General instructions in shipping by Grand Trunk are embodied in these words in the tariff schedule: On lumber in carloads, minimum weight, 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be charged, and must not be exceeded. Should it be impracticable to load certain descriptions of light lumber up to 30,000 lbs. to the car, then the actual weight only will be charged for, but not less than 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond, to the same destination. For instance, the rates from Tara or Hepworth to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Wiarton to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, but in no case are higher rates to be charged than as per mileage table published on page 9 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Brace, bridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale and Sundridge, to Toronto, 8c.; South River, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 11c. The rates on hardwoods average about from 1c. to 2c. per 100 lbs. higher than on softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

(Concluded on Page III.)

OFFICES—Lumber District, Albany, N. Y.; 20 South St., New York. Telephone 711 Broad.

PARKER C. RONAN, Manager.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Cook's Mills, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Central Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods.

MODIFICATION OF HARDWOOD RATES.

THE Grand Trunk Railway and Canadian Pacific have made the rates on hardwoods from certain points to Toronto and Hamilton as follows. The regulations are over the signature of Mr. John Earls, W.D.F.A., of the G. T. R., and given in reply to a letter from Toronto hardwood men:

"After careful consideration we have come to the conclusion that, on and after Jan. 1st, 1895, a modification will be made in the present arrangements for hardwood lumber, to the effect that the rate will be 7½c. per 100 lbs from our Northern and Northwestern branches to Toronto and Hamilton. This rate, however, will not apply from main line points and the straight run between Toronto, Sarnia and Windsor; also that so far as rates on common lumber to points like Guelph, Galt London, Woodstock, Ingersoll, etc., from all lumber shipping stations the rate will be the same on hardwood as on pine." On the old principle, we suppose, that half the loaf is better than none, hardwood men have something, possibly, to be thankful for, though there is no good reason why the rates generally on hardwood should not be as low as on pine. It is understood that the C. P. R. rate will be made uniform at 7½c from same points.

## OBITUARY.

### HENRY HERRMANN.

WITH deep regret the lumber trade throughout the United States and Canada learned of the death of Mr. Henry Herrmann, of New York, which occurred at his residence in that city on November 30th, after a short illness. Deceased was 59 years of age, and on the 12th of October last celebrated his 28th business anniversary. He ranked among the largest lumber dealers in New York, and was head of one of the most extensive establishments in the world for the manufacture of special lines of household furniture, employing 2,000 hands. The following particulars of his life, taken from a souvenir recently issued, will be read with interest, serving, as they do, as an exemplification of what may be accomplished by indomitable perseverance and a thorough knowledge of a trade :

Born in East Prussia in 1837, he was apprenticed to the trade of cabinet-making at the age of fourteen years. He came to America in 1866, landing in New York, but immediately starting for the west. Returning to New York a year later, he entered into partnership with a fellow craftsman and rented a small shop on Mott street, manufacturing walnut wardrobes, the combined capital being $43, representing the wages of the partners for the preceding week. In two weeks they had doubled their cash capital, and in six weeks their business had so grown that they were compelled to secure larger quarters. Within six months their business necessitated a further change, and at the end of three years the aggressive young firm was employing 100 men. In April, 1872, Mr. Herrmann's partner died. He then branched out, establishing a lumber station, saw mill and factory at Indianapolis. Two years later he engaged extensively in the hardwood lumber trade, buying immense tracts of timber lands. Since that time he has met with unparalleled success, and at the time of his death was the active head of more than twenty manufacturing plants making or consuming hardwood lumber, located at various points in the eastern, central and southern portions of the United States, with agencies at London, Eng., Hamburg, Germany, and Sydney, Australia. Mr. Herrmann was the pioneer in the export hardwood lumber trade to England, which he first commenced in 1877, and since that time it has reached the enormous amount of $10,000,000 annually. Some idea of the extent of Mr. Herrmann's business operations may be gathered from the fact that in one year he handled 25,000,000 feet of black walnut alone. His ordinary stock of hardwoods at various distributing points aggregated more than 20,000,000 feet. Over one million dollars were annually paid to his employees as wages. The lumber business was exclusively owned by Mr. Herrmann, in whose hands rested the entire management. He was a man of extraordinary business qualifications, and notwithstanding his active career, he had many social friends, and his home life was most pleasant. He was twice married and leaves a widow and two children.

### RICHARD NAGLE.

Mr. Richard Nagle, a prominent citizen of Ottawa and one of the best-known lumbermen of Eastern Ontario, died at Peterboro', Ont., on November 30th, after an illness of about a month's duration. The late Mr. Nagle was of Irish descent, having been born in Mitchellstown, county of Cork, in 1831. He came to this country with his family when nine years of age, and settled in the township of Ramsay, county of Renfrew. When quite a young man he took to lumbering, and was for many years one of the trusted and expert foremen of the late firm of John Egan & Co., being afterwards appointed manager, a position which he occupied for many years. Then he severed his connection with the firm and branched out in the lumber business himself. His limits were principally situated in the Lake Nipissing region. His first limit was the rocky farm near Mattawa, which he disposed of to Klock Bros. He purchased many others, but sold the majority of them, and retired from active business twelve years ago. Mr. Nagle's headquarters were at Ottawa, and for several successive years he took out square timber and marketed it in Quebec, but it was not in this line that he made the greater portion of the considerable fortune he died possessed of, but in buying and selling limits, in which branch of business many fortunes have during the last twenty years been made. In politics deceased was a staunch Liberal, and occupied a foremost place in the ranks of this party. In 1875 he was the Liberal standard-bearer in Ottawa in the provincial elections, but was defeated, the contest being a three-cornered one. He was a man of great natural ability, and it was often remarked that he could talk as fluently in French and Gaelic as in English or Irish. Possessed of a vigorous mind and much perseverance, he gained a leading place among his fellow citizens. His estate will probably reach $250,000.

### WM. PARK.

The death of Mr. Wm. Park took place at Newcastle, N. B., on the 25th of November. The deceased came from Scotland to Newcastle when quite young, and for many years was engaged in the milling and lumber business, first as a partner in the firm of Park & Alexander, and on the death of Mr. Alexander, as a member of the firm of McLeggan & Park. Later he carried on the same business on his own account. A few years ago he gave up the lumber business and confined himself to general merchandise. As a business man his word was his bond ; few men stood as high in the estimation of the public. He was married to a danghter of the late Alexander McLaggan.

### HON. J. J. FRASER.

On the 24th of November a cable from Genoa announced the death of Hon. John James Fraser, Q. C., Lieutenant-Governor of New Brunswick. A few weeks previous he left for Europe in the hope that the climate of that country would prove beneficial to his health, which had been failing for some months past. Deceased was born in Nelson, Northumberland county, N. B., in the year 1829. His father was a native of Scotland, and settled on the Miramichi in 1812, commencing business as a lumber merchant and ship builder. Hon. Mr. Fraser was appointed Lieutenant-Governor in 1894.

### JOHN FRASER.

A fortnight ago the news was received of the death of Mr. John Fraser, the well-known lumberman of Westmeath, Ont. Mr. Fraser had been ill with cancer for a long time. He was at one time one of the most prominent lumbermen in the Ottawa district, having with his brother, Mr. Alex. Fraser, of Ottawa, engaged in extensive operations. He was highly esteemed by his competitors in the business and was always known for his upright dealings. He was 67 years of age.

## INSPECTION OF LUMBER CAMPS.

AT the request of Messrs. Gilmour & Co., of Trenton, Ont., Dr. A. Robertson made an inspection of the lumber camps of the company situated in the townships of Peck, Hunter and McLachlin, and has reported as follows :

At the mills I found a clean bill of health, no sickness whatever. The company have been building a number of commodious boarding-houses for the accommodation of its employees, into which they expect to move in a few days. The old camps, which they have occupied since coming here, they intend to tear down as soon as possible after vacating them.

After inspecting the mill and surroundings, I visited the camps under the jurisdiction of Mr. P. M. Gunter, and found all the men in a very good state of health, there being a few cases of la grippe in the camps, and cases being complicated with a little sore throat of a follicular tonsilitis character, there being some exudation of pus over the follicies of the tonsil, but nothing of a membranous character.

There had been, previous to my visit, several cases of sore throat among the men, the majority of which, however, recovered in from one to three or four days. The camps under Mr. Gunter's jurisdiction are well built, being high and well ventilated, while the interior of each is kept in a cleanly condition, a man being appointed for the express purpose of keeping the camps clean.

At a suitable distance from each shanty, water closets have been erected on the cesspit plan, and all men are ordered to use them. The waste from the cookery is carried to a suitable distance from the camp before being dumped.

Altogether, the general health was as good as could be expected where so many men from different parts of the country are congregated.

I next visited the camps under Mr. McCaw's jurisdiction, and found the camps, with probably one exception, in much the same condition as I had found the case of those first visited. There had been no cause for men to lay off work.

The camp in question is an old camp, having been used the season before, and was not so well ventilated as the others. I gave orders to have a couple of ventilators put in the roof over the men's sleeping apartment, and instructed the foreman to see that all waste was carried to a suitable distance from the camp before being dumped.

In this camp I found the men all in a good state of health, and was informed by the foreman that there had been no cases of sickness in the camp during the time they had heen there, but I gave these instructions as a precautionary step on account of there having been some cases of sore throat on the limit.

Whatever there may have been in the way of sore throat previous to my visit, I can report that now there is nothing whatever of an infectious or contagious character, and I am satisfied that the precautions taken by the men in charge are all that can be required to prevent an outbreak of anything of a contagious character. I might mention that in the boarding-house at the mills, as well as in the camps, I found the provision supply of the best, both as to quantity and quality, everything necessary to a healthy diet being supplied, as well as many of the luxuries.

## ADJUSTMENT OF TOLLS.

A settlement of the dispute between the East River Improvement Company and the Brennan Lumber Co., of Hamilton, and the Whaley Lumber Co., of Huntsville, has been arrived at by the arbitrators, Messrs. George Kennedy and Theo. C. Taylor, of the Ontario Crown Lands Department. The lumber companies held that the Improvement Company were charging excessive tolls, but the basis of settlement awarded a higher rate of toll than had hitherto been charged. The case was first argued before Messrs. Kennedy and Taylor, who submitted their findings in regard to the books, vouchers, etc., of the East River Company. The total expenditure of the company was calculated at some $9,100. It was determined to fix the rates of tolls so that the income thus realized would give a revenue of 10 per cent. on capital invested, would provide for the sinking fund which, calculated at 6 per cent. per annum, would repay the company's paid-up capital at the end of their 12 years' lease if invested now, would also pay for the repairs on each section for last year, and would meet as well the expenses of management.

To cover these, the arbitrators decided that the following rates of toll would be necessary, and at a private meeting between the representatives of the parties interested it was decided to accept a settlement on the basis involved : For section 1, consisting of Tasso Lake dams, 8½ cents, formerly 5 cents, per thousand feet ; section 2, consisting of the Tasso Creek, 27½ cents, formerly 25 cents ; section 3, West Branch dam improvements, 21½ cents, formerly 12 cents ; section 4, Tasso Creek to Sinclair town, 4 3/5 cents, formerly 8 cents ; section 5, Sinclair to Tonawanda Creek, 4 3/5 cents, formerly 5 cents ; section 6, Tonawanda to Rebeccah Creek, 3½ cents, formerly 3 cents ; section 7, Rebeccah Creek to the mouth of the river, 1½ cents, formerly 2 cents, and section 8, at the mouth of the river, 1⅛ cents, formerly 1½ cents.

## INTERESTING LUMBER SUIT.

LITIGATION over timber limits involving half a million dollars has been commenced in the Ontario courts. The plaintiffs are William H., Robert D., Charles G. and William Hurdman, of Ottawa, and the defendants are Walter G. Whyte, of Albany, N. Y.; Andrew G. Buell, of Burlington ; Frederick W. Avery, Ottawa ; Charles E. Reade, Ottawa, and the Hull Lumber Company.

Some years ago the plaintiffs sold their rights in certain timber limits in the province of Quebec to the defendants. According to the agreement the plaintiffs claim a one-fifth interest in the assets of the Hull Lumber Co., one of the terms of sale being that when certain liabilities assumed by the purchasing firm had been met the plaintiffs were to receive the interest now complained, and they contend that the liabilities have long since been wiped out. A writ has been issued asking for an injunction to prevent the defendants from selling or disposing of the property.

The Hull Lumber Company, Limited, is the name of the new company formed by the defendants, and their letters of incorporation give them power to purchase, take over or otherwise acquire by any legal and proper means all or any of the business now being carried on by the firm of Buell, Hurdman and Company, as well as that

formerly carried on by Buell, Orr, Hurdman and Company, at the city of Hull, in the province of Quebec, and elsewhere, and the whole or any part of the good-will, stock in trade, assets and property, real and personal, movable and immovable, of the said firms of Buell, Orr, Hurdman and Company, and Buell, Hurdman and Company, subject to the obligations, if any, affecting the same.

It will probably be some time before the case is finally brought to trial, as a large number of witnesses will be examined. Messrs. McCarthy, Osler, Hoskin & Creelman, of Toronto, are acting for the plaintiffs.

## PERSONAL.

We regret to learn of the recent serious illness of Mr. Martin Russell, the well known lumberman of Renfrew, Ont.

The friends of Mr. Thomas Bryce, retail lumber dealer of Toronto, have induced him to contest ward 2 for Alderman.

Mr. A. F. E. Phillips, of the Brunette Saw Mill Company, New Westminster, B. C., is at present paying a visit to friends in Ontario and Quebec.

Hon. J. B. Snowball, of Chatham, N. B., will leave for England about the end of January on his annual tour, and will be absent about two months.

Ex-Alderman Crannell, secretary of the Bronsons & Weston Lumber Company, of Ottawa, in response to a large petition presented by the citizens, has consented to offer himself as a candidate for the mayoralty.

Mr. Martin Power, who represented the large Liverpool lumber firm of Watson & Todd at Montreal, has gone to St. John, N. B., where he will look after the shipments of his firm from that port during the winter.

At a recent meeting of the shareholders of the Georgian Bay Lumber Co., Mr. W. J. Shepherd, who has been general manager of the company, was elected president, to fill the vacancy caused by the death of the late A. M. Dodge.

We are indebted to Mr. H. G. Ross, of Victoria, B. C., for the particulars and illustrations of British Columbia mills which appeared in our special November number, and which formed one of the most interesting features of the issue.

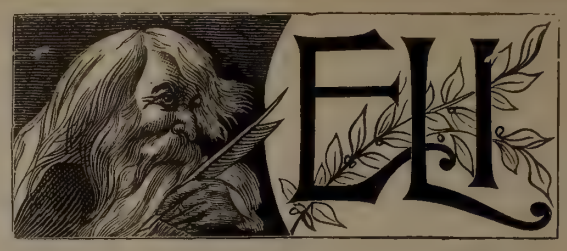
The news comes from across the Atlantic of the marriage of Mr. John F. Burstall, of the firm of J. Burstall & Company, Quebec and London. The bride was Miss Green, daughter of Sir William Henry Rhodes Green. Their honeymoon included a trip to Canada.

The success which Canadians attain in foreign countries has again been instanced in the case of Mr. James Connors, a native of Little Rideau, near Hawkesbury, Ont., who has recently been elected to represent Mackinac county in the Michigan legislature. Mr. Connors left his home about twenty years ago for California, moving a little later to St. Ignace, Mich., where he engaged in the lumbering business. A few years afterwards he had the honor of being elected mayor of St. Ignace.

## TRADE NOTES.

From the Wm. Hamilton Mfg. Co., of Peterboro', Ont., we have received catalogues describing and illustrating their already well-known makes of engines and boilers. The improved "Payne" Automatic Corliss Engine catalogue is neatly printed, and contains, besides the numerous illustrations, a number of valuable tables of calculations relating to the operation of steam engines, as well as testimonials from customers. The boiler catalogue likewise contains numerous tables, and views of the different varieties of boilers and their sections. A copy of each of the catalogues will be forwarded to any address upon application to the company.

The Dodge Wood Split Pulley Company, of 74 York street, Toronto, are now offering for immediate delivery high grade turned and polished steel shafting in any diameter and in any length up to 24 feet each; new designs in either compression, grim-death or flange couplings; hangers of all kinds, any drop, of latest style, adjustable in all directions, with either plain bearings or the Dodge Company's new patent capillary self-oiling bearings. This is positively claimed to be the most up-to-date line of power transmission appliances on the market, and manufacturers and others using shafting, hangers, pulleys, clutches, etc., will do well to get the company's prices when in want.



OFFICIAL business with the Crown Lands Department brings Mr. Wm. Margach to Toronto about twice a year. Mr. Margach is Crown Timber Agent for the Rainy River district, with headquarters at Rat Portage, and when in the city before the Christmas holidays he spoke very hopefully of the future of northwestern Ontario. "Lumbering is quite active," he said, "and more men have been sent to the woods than last year. The quantity of logs taken out this winter will be fully one-third greater than for any past season for many years, which is accounted for by the fact that Manitoba and the Northwest is our market, and the farmers there have obtained better prices for their wheat and have naturally more money to spend in improvements and new buildings. The farmers in the northwest are gradually becoming more prosperous and are pursuing more business-like methods." Mr. Margach tells me that the mining boom is creating quite a local demand for lumber, and as the attention of capitalists has now been directed to these fields, he anticipates that next season will be one of the most prosperous yet experienced. He expressed his regret that the country did not possess a greater population. Speaking of forest fires he said that during the past summer, owing to wet weather, no fires had occurred within his district, which embraces a territory 200 miles wide and over 150 miles from north to south. It was customary to employ fire rangers, but this year he had withdrawn his men, as the fires, if started, would speedily die out.

* * *

A LUMBER operator on the Restigouche, in New Brunswick, caused a survey to be made of certain crown lands held by himself and others, believing that another operator was lumbering on the property. A survey proved this to be the case. "Now," said the operator to a friend, "we told this man we believed he was over on our limits. We had this survey made and have shown our contention to be correct. Yet we must, under the law, pay the whole cost of running the line along our blocks. If we should allow him to take the logs the government can hold us for the stumpage. In order to get an already determined point to start from, we had to survey over six miles before coming to our own lands. Once I wanted to run a line for two miles. To do so I would have to start eight miles away. I let it go. They will perhaps tell you in the crown lands office in starting a line to begin at a certain tree on a certain spot on the line of an old survey. I was given as a starting point a cedar tree on a line run forty years ago. The cedar could not be found. The department should run out its block lines more rapidly, and it should insist that one man (as in my present case) should not have to pay the whole cost of a survey between his land and another's. Of course we can hold those logs, but if we do, after this man has gone to all the expense he has, we would be put down as the worst men in the country. I tell you the lumber operator has troubles that loom up sometimes as big as the Sugar Loaf yonder."

* * *

MANY Canadian lumbermen have during the past month made the acquaintance of Mr. Edwin Haynes, of the Timber Trades Journal, of London, England, who has been commissioned by the publishers of that well-known journal to write up the export lumber trade of Canada for a special number proposed to be published about the first of February. Mr. Haynes has been connected with the Timber Trades Journal for over twenty years, and is therefore an encyclopedia of information on matters pertaining to the lumber trade of Great Britain, while his knowledge of that industry in other countries is above the average. Before reaching Toronto he had spent some time in the principal eastern lumber centres of Canada, such as St. John, Quebec, Montreal and Ottawa, and expressed himself as being pleased with his visit to these cities, especially Quebec, owing to its historical associations. Mr. Haynes spent a week in Toronto, going from there to New York. He states that in England there is a growing feeling in favor of purchasing supplies from the colonies, providing as good value can be obtained. To my question regarding the probability of the further extension of the Canadian lumber trade with Europe, he replied that he was afraid the distance between the countries, and the consequent high carrying charges, would prevent the profitable shipment of low grade stock, but the quantity of better grades exported would certainly continue to increase. He was surprised that our manufactures of wood were not much greater, as he considered this to be one of the most remunerative ways of utilizing forest products, and instanced in this connection the extensive trade of the Rathbun Company, of Deseronto. "The Canadian manufacturers," added Mr. Haynes, "give little study to the requirements of the European markets, but content themselves with dealing with the shippers. This is in striking contrast to the Swedish and Russian manufacturers, who visit the markets each year in order to become thoroughly acquainted with their demands. Of course, here the lumber trade is conducted on a cash basis, and the manufacturer receives payment for his goods upon delivery to the shipper, while in Great Britain goods are always sold on time. This, probably, partially accounts for the fact that the whole export trade is handled by about a dozen shippers who are financially strong, and who relieve the manufacturer of all responsibility, and in the end this may be the most satisfactory method. These shippers have established a connection in England which means more than the average Canadian imagines, and by means of branch houses are enabled to handle goods to the best advantage. There are many points to be studied in catering for the English trade."

Mr. T. H. DeCew, the well-known mill owner and timber merchant, formerly of Essex, Ont., has been on a visit the past month to his old home. Mr. DeCew is now located in Washington Territory, between Tacoma and Portland. He owns 3,700 acres of timber land in Oregon, and his mill has a capacity of 90,000 feet per day. A great deal of the timber is exported to China and Japan. Mr. DeCew says that a peculiar feature of the Chinese duty is that it is a specific one, so much per stick, regardless of size.

## J. B. SMITH & SONS' SAW MILL.

LAST fall fire laid waste the saw mill of Messrs. J. B. Smith & Sons at Callendar, Ont., but upon its ashes has been erected a more pretentious and modern structure. In every particular the new mill is complete, being well lighted by large windows, while an electric plant furnishes illumination at night.

The mill is of frame, with heavy timbers, its dimensions being 132 × 42 feet. The roof is hipped with a cupalo running the full length, in which the windows are set. The lath mill annex is 30 × 55 feet, and the filing room annex 10 × 30 feet. On the ground floor is the motive power. Twin Cunningham steam feed engines drive the steam feed for the dimension carriage, and gunshot steam feed drive the lumber carriages. A Doty engine of 150 h. p. operates the circular saws, double edger and jack ladder chains, and a Doty engine of 50 h. p., slide valve, runs the balance of the machinery. A Reliance 35-light machine furnishes the light. Mr. Stephens is the electrician in charge. The pulleys used are made by the Dodge Wood Split Pulley Co., and the belting is of Scotch manufacture. In the engine-room are two steam pumps, which, with six hydrants and 500 feet of hose, furnish the fire protection. The manufacturing machinery consists of three carriages, one driven by steam feed, and the other two by rope drives operated by gunshot steam feeds. There are two circular saws, one made by the Jas. Robertson Co. and one by Shurly & Deitrich. The double edger and lath mill machinery, steam niggers, trimmers, and the two lath tables, besides the carriages, were mostly built by the Wm. Hamilton Mfg. Co.

In the filing room are two large automatic filing machines, with all accessories. At one side is the boiler room, built of brick, containing three Goldie & McCulloch boilers, two of 150 h. p. each and one of 100 h. p. Two iron smoke stacks have a brick base of 16 feet each. One is 90 inches in diameter by 45 feet above the roof, and the other is 75 inches in diameter by 80 feet high. Sawdust, etc., is used for fuel. The burner is circular, and built of stone, and is surmounted by an iron rim, but uncovered.

A well-equipped blacksmith shop, 64 × 20 feet, supplies all demands for repairs. There are two forges, a 22″ lathe swinging 40 inches, an iron shaper swinging two feet, and an iron drilling machine. An upright boiler supplies steam to a 20 h. p. engine which operates the machinery.

The yard is large, and an engine owned by the company does all the shunting, etc., of the cars. On the lake is their tug, the "Sparrow," which picks up the logs and does all the towing.

Mr. Jas. Smith, one of the members of the company, is in charge. The firm manufacture all grades of lumber, lath, shingles, and dimension timber.

## IMPORTANT PATENT DECISION.

BY recent decision of the United States Circuit Court at Cincinnati, O., the Dodge and Philion patent for separable wood pulleys, covering the compression fastening and interchangeable bushing system, is broadly sustained. Under the patent laws, the user, the seller and the manufacturer are all held to be infringers and liable as such to the owners of the patent. The Dodge Wood Split Pulley Company, of Toronto, is taking proceedings against infringers of their patent in Canada.

## NEW BRUNSWICK LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

LUMBERMEN have been badly in need of snow in order to carry on operations in the woods successfully. The weather early in the month was most unfavorable, crews in some cases finding it impossible to do effective work. Of late there have been some light snow-falls, and it is probable that the extent of the cut will not be interfered with.

Messrs. Richard Turner, of Quebec, and W. H. Thorne, of this city, liquidators of the St. Lawrence Lumber Company, of Bathurst, have completed their duties and received their discharge from Judge Tuck. The St. Lawrence Lumber Company went into liquidation about two years ago. At the time it looked as if there would be serious legal difficulties, as there were conflicting interests in this province, Quebec and England. The liquidators were able to avoid trouble, and it is understood only about $1,400 of the estate was required to pay all the legal bills. Operations were carried on the first winter and then the property was sold. In all about $237,000 passed through the hands of the liquidators. The general creditors got fifteen cents on the dollar, a better settlement than was looked for at the time of the failure.

The construction of a line of railway from Bathurst to Tracadie, as contemplated, will prove of great benefit to the country. At Tracadie Senator Snowball has a large saw mill with an annual output of nine million feet. Adjacent thereto is a large area of timber, known as the Sweeney block, estimated to yield 100,000,000 feet of timber. It is owned by an American company, of which Mr. Hill, of Bangor, is the president, and it is said that it is proposed to erect on the property a large saw mill to cut lumber for the United States market. The rail shipments would go via the gulf shore and the Caraquet and I. C. R. lines through St. John.

At a meeting of the directors of the St. John River Log Driving Company held early in the month, matters in connection with the failure of F. M. Moore were discussed. An offer of $4,000 was made by Mr. Moore in settlement of the claim against him, but it was refused as altogether too small. The selection of L. C. Stearns, of Caribou, as arbitrator between the log owners and the company was ratified.

Mr. Miles Moore, a son of Mr. Fred. Moore, the well-known lumber operator of Woodstock, has purchased the property known as the Craig & Sawyer mill on the Meduxualsek, and will make repairs thereto.

### BITS OF LUMBER.

The revenue from New Brunswick crown lands will this year be ahead of last year's figures, which were $140,000.

Hon. J. B. Snowball, of Chatham, has commenced the construction of two steam tugs for service in connection with his lumber business.

Mr. Frederick Brown has sold his interest in the milling business at Cross Creek. The remaining partners, Messrs E. & W. Sanson, will continue the business.

Mr. William Cunningham left the city this week for New York, en route to Hamilton, Bermuda, where he has been engaged to fit up a saw mill. The work will require about two months.

ST. JOHN, December 23, 1896.

## BRITISH COLUMBIA LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

AT the time of writing it is feared that the lumber trust formed last winter to control prices has gone to the wall, so far as coastwise shipments are concerned at least. The consensus of opinion is that the first of January will witness its termination. Since the first of the month prices have been reduced from $11 to $9.50 per thousand feet. This was brought about by the cutting of prices by retail dealers in California, which compelled the trust to take such action. The Central Lumber Company was formed a little over a year ago by the big mills of the Pacific coast, including most of those in this province. These controlled the large majority of the retail yards, and after months of hard work the mills of the coast and the dealers were united under the central combine. Prices were soon after raised, and the agreement entered into was dated January 1st, 1896. It was to terminate in a year, by which time the movers of the enterprise hoped to cement the organization so that it would last for years. The attempt has been futile, however, owing to the diversity of interests of the large number of mill men and dealers, who became identified with the Central Lumber Company. The large manufacturers hope, however, to hold together for another year to control the foreign trade, and their efforts are now being directed towards this end.

British Columbia lumber manufacturers are looking for an increased trade with China. The Chinese Foreign Office has issued a secret order giving permission for the construction of railways from Hankow to Canton, and from Hankow to Soochow. As China is largely denuded of her timber, the supply will be furnished largely by foreign countries, and British Columbia should certainly receive a fair share of the trade.

G. O. Buchanan is making extensive improvements to his saw mill plant at Kaslo. The shingle capacity has been increased from 20,000 to 70,000 per day by the addition of a new machine, and the capacity of the saw mill will be doubled, which has necessitated the enlarging of the buildings. In addition to this a complete wood-working plant has been ordered. Mr. Buchanan reports a busy season, and the consumption of logs has been much greater than was anticipated.

### COAST CHIPS.

The limits of new markets for Douglas fir have not yet been reached. The British Columbia Mills, Timber & Trading Co., of Vancouver, B. C., made a shipment last month to Gibraltar, Spain.

The local government have placed upon the market 10,314 acres of timber land on Queen Charlotte Island, the lease being for twenty-one years. Offers are invited until the 21st January.

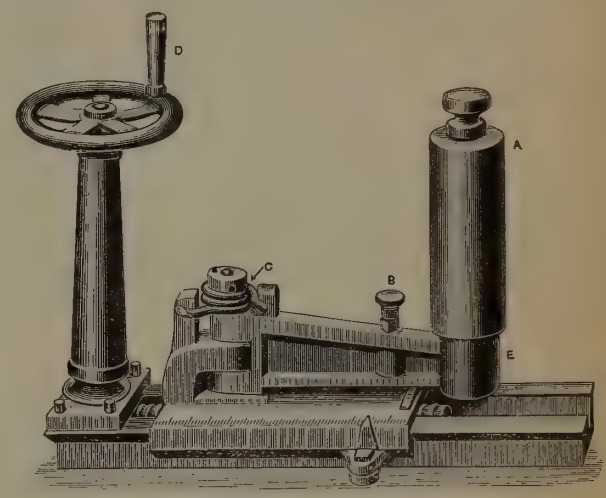
During the month of November twenty-two steamship charters were reported for foreign points. The season thus far has been more active than last year.

NEW WESTMINSTER, B. C., Dec. 18, 1896.

## LANCASTER MACHINE WORKS.

SITUATED on the bank of the beautiful Lake St. Francis, in the old Scotch county of Glengarry, is the pretty little town of Lancaster. Among the important business firms of the town is the Lancaster Machine Works. This enterprise was established in 1881 by the late William Stafford, a native of Hyde, Lancashire, England, who previously had carried on a similar business in Montreal. In 1884 the works were completely destroyed by fire, but were immediately replaced by a more modern and substantial building and plant.

A little over a year ago the head of the firm was accidentally killed on the G. T. R., and since that time the business has been carried on by his two sons, Messrs. A. & W. J. Stafford. They do an extensive trade in general saw mill plant and hold a number of patents on this and other machinery. The accompanying cut represents a



IMPROVED SET ROLLER MADE BY LANCASTER MACHINE WORKS.

set roller they manufacture which has many advantages in its favor, notably those of convenience, durability and neatness. It consists of a roller A carried on a radial arm E, which in turn is hinged to a traversing carriage sliding upon a planed bed or base, the whole of which is securely bolted to the saw frame or other favorable position in front of the saw. A spring C at the base of the radial arm keeps the roller in place, but when a knot or other uneven surface comes in contact with the roller this spring allows it to give way until the obstruction has passed. The roller is set by means of the hand wheel D, which controls the traversing motion of the carriage by means of a screw shaft beneath the same, and an indicating finger and guage assists the sawyer in setting the roller for the thickness of his cut. While slabbing, the retaining pin B is raised and the roller swung out of place. A large number of mill owners recognizing the merits of this inexpensive machine, have placed them in their mills and pronounce them very satisfactory.

In addition to the manufacture of saw mill appliances, this enterprising firm make a specialty of tannery and dairy machinery, and lately made several shipments of machinery to Europe. They are also working up a good trade in a special line of cotton mill machinery.

# THE NEWS.

—Gilmour & Company's new mill at Canoe Lake, Ont., has closed down for the season.

—Jacob Lawrence & Son, lumber merchants, of Sarnia, Ont., have opened a lumber yard at Bothwell.

—John McCormack, of Ottawa, is fitting up a small saw mill in Low township for the Asbestos Mining Co.

—Thomas McCamus has returned to his home at Bobcaygeon, Ont., from Lake Temiscamingue, where he has erected a saw and shingle mill.

—It is stated that the Emery Lumber Company are pulling down their saw mill in Michigan and intend removing to Byng Inlet, where in future all their logs will be manufactured.

—George Merritt, of Chatham, and J. H. Hamill, of Toronto, have purchased an extensive timber limit in Georgia, in the United States, and will conduct lumber operations there on a large scale.

—Charles Stewart has purchased W. L. Herriman & Son's mill at Honora, Ont., and is fitting it up for work this winter. Mr. Stewart is a practical mill man, and will certainly meet with success.

—The Rathbun Company are said to own two hundred million feet of hemlock, as well as a large quantity of cedar, in the townships of Grimsthorpe and Anglesea, North Hastings. At the present rate of cutting the timber will last sixteen years.

—A gift was recently made by Mr. E. Le Roi Nellis, of St. John, N. B., to Major Wm. McKinley, president-elect of the United States, of a large rocking chair weighing 175 pounds. It was made of Canadian white ash, and is said to have been much admired.

—William Robinson, lumber valuator, of Bobcaygeon, Ont., has lately returned from the Spanish river, where he spent six weeks estimating the quantity of standing timber on the different berths recently sold by the Ontario government.

—The Crown Lands Department of Ontario have sent a corps of rangers to examine into the value and extent of the pine forests existing north of Lake Wahnapitae, with a view to opening the land to miners. The land has never been opened to prospectors, but it is said that valuable mineral deposits are to be found on portions of the territory.

—Several new saw mills are being erected along the line of the Lake St. John Railway in Quebec. Mr. Burns' new steam mill at St. Gabriel has commenced sawing and will be kept in operation all winter. A new mill is being built at Lake Sergent and another at Kenogeni, near Chicoutimi. It is estimated that over one million logs will be taken out along the line of the railway during the present winter.

—Stehelin Bros., lumber operators, have arranged for the construction of a railway from their limits to Weymouth, N. S. The rails are to be of poles eight inches in diameter, and the wheels are to be concave to suit the rounding surface on which they will run. Probably the only other pole road in Canada is that operated by the Bass River Infusorial Company from their property at Economy to the refineries.

—The Rathbun Company have closed down their lumber and shingle mills at Lindsay, Ont., after a most successful season. During the seven months of operation, there were shipped fifty-one large cars of saw-dust, averaging twenty cords to the car, and making a total of 1,020 cords. Mr. G. H. M. Baker, the local manager, has gone to Manitoulin and the North Shore to arrange for getting out logs during the winter.

—In his budget's speech in the Quebec Legislature, Hon. Mr. Mantel referred to the increasing revenues derived by the province from crown lands. For the fiscal year ending 1886-87 the receipts were $692,000, and the expenditure in connection therewith $154,000, while for the fiscal year ending June 30th last the expenditure was only $185,000, while the receipts were $1,045,000. He further referred to the high prices realized for the timber berths at the public sale in May last.

—A report received at the Department of Trade and Commerce, Ottawa, from J. W. Down, Bath Bridge, Bristol, says: "During the present month I have received many letters from firms in Canada interested in the exportation of timber, and I have placed their communications before the principal Bristol timber merchants. Bristol is a large centre for timber from the Baltic, and from what I can gather there is room here for much larger shipments of Canadian timber, and I trust my efforts in this direction will lead to much larger business being done next season."

—The annual meeting of the Maine Lumbermen's and Land Owners' Association was held at Bangor on the 20th of November. Secretary and Treasurer Wilson Crosby read his reports, which were accepted. These officers were elected; B. F. Davis, Bangor, president; Turner Buswell, Skowhegan, W. W. Brown, Portland, Llewellyn Powers, Houlton, John K. Ames, Machias, M. G. Shaw, Bath, vice-presidents; J. Manchester Haynes, Augusta, S. P. Bass, Bangor, Geo. Murchie, Calais, Geo. B. Dunn, Houlton, Cornelius Murphy, Old Town, executive committee; Wilson Crosby, Bangor, clerk and treasurer; S. H. Boardman, F. H. Appleton and C. P. Webber, Bangor, auditing committee.

—Another dispute as to water rights came up before the Ontario Commissioner of Crown Lands recently. Messrs. McRae and Mackenzie are the owners of a sawmill on the Bonnechere river, a branch of the Ottawa. A little further down the river and on the opposite side are situated the electric works of the Bonfield estate. McRae and Mackenzie claim that certain works which the Bonfield people are building will deprive them of the proper use of the water, and they ask permission to lease a water lot on the same side of the river as the Bonfield works, in order that they may build a dam and secure water power. The Bonfield estate oppose the granting of such a lease, as they claim their works will be injured thereby.

## CASUALITIES.

—A man named Levesque was killed by the falling of a tree while working in the lumber camp of Gillies' Bros. at Bear Creek.

—While working in one of the Huntsville Lumber Co.'s camps, George Hubbard was severely injured by a tree falling upon him.

—While working in the woods at Kleinburg, Ont., Duncan McAllister was struck by a falling tree and had his leg broken.

—Joseph Crosby, aged 70 years, was working in a saw mill at Lake Tuskett, N. S., when his clothes caught in the belting and he sustained fatal injuries.

—James Painter, a resident of Woodland, N. B., was killed in the woods on the Southwest Miramichi by the falling of a large limb. Deceased was 58 years of age.

—A resident of Notre Dame du Rosaire, Que., named Athanase Blanchet, while engaged in his mill, was precipitated on the circular saw in motion, by which he was terribly lacerated and died almost instantly.

—A lumberman named Joseph McPeak was brought to Toronto from Gravenhurst recently suffering from a broken leg. The injury was sustained by a falling tree while working in the lumber woods.

—While a gang of men were at work in the woods about six miles north of Alvinston, Ont., one of their number named Lester Smith, aged 21 years, was struck on the head by the splitting of a tree, resulting in his death a short time afterwards.

Frank Buchanan is erecting a new saw mill at Bass Lake, Ont.

In one of the St. Anthony Lumber Company's camps at Cache Bay, Ont., a pine tree was cut making seven logs 16 feet long, the smallest measuring 32 inches at the top end.

The act of incorporation of the Kemptville Lumber Manufacturing Company, of Kemptville, N. S., has been extended to include the manufacture of doors, sashes, etc., and the capital stock has been increased from $12,00 to $25,000.

The advertisers in this paper are the most progressive and reliable men in the machinery and supply business. You will find it to your interest to write them for particulars and prices of their goods. In doing so kindly mention that you saw their advertisement in THE LUMBERMAN.

Twenty-seven Poles recently arrived from Detroit on their way to Smith's lumbering camp at Ruscomb Station, bringing with them tools, clothing and provisions. The custom officers refused to allow them to pass without paying a duty ranging from 25 to 35 per cent. on the goods, which was finally agreed to. This is said to be the first instance in which a duty of this character has been collected.

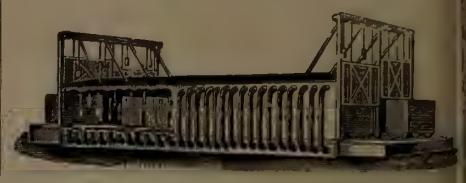
# THE PARMENTER PATENT DRY KILN



For Drying LUMBER

Staves, Heading, Shingles, &c.

**The Latest**
**The Cheapest**
**And Best**

CHATHAM, ONT., June 19th, 1896.

JAS. S. PARMENTER, Flushing, N. Y.

DEAR SIR: We take very great pleasure in being able to say from nearly one year's use of your Patent Dry Kiln, we find it away ahead of anything we ever yet tried for thoroughly drying lumber without injuring it in the least. So far we have found exhaust steam alone sufficient for our purpose, so that it absolutely costs us nothing to run it. We thoroughly dry white oak, rock elm, balm and other hardwood lumber in less time than we ever did with a blast kiln, and especially find it a splendid kiln for drying white oak hubs It does its work so naturally that neither hubs nor lumber are injured by it.

## WHY BAND SAWS BREAK

SIXTEEN REASONS, AND HOW TO AVOID THEM

Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking; analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner o properly setting irregular teeth is described. In connection with the treatise is a history of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, **ONE DOLLAR.**

[COPY.]

HASTINGS, Dec. 3, 1894.

F. J. Drake, Esq., Belleville.

Dear Sir,—We have waited two years before giving you our idea of your machinery. This we do to thoroughly test it, and can now say we know what it can do.

Your Saw Mill is equal, or nearly eqval to any we have seen of much heavier make, and far in advance of any light rig in the market. The capacity per day is fully up to your guarantee, 40 M per day. We have tested with eight men.

The Shingle Mill cannot be beaten for any kind of timber. Ours being in a manner a custom mill, we have good, bad and indifferent timber, but for all it does the work sattsfactorily.

You may use this in any way you please, or refer to us at any time.

Yours truly,
(Sgd.) W. J. & H. W. FOWLDS.

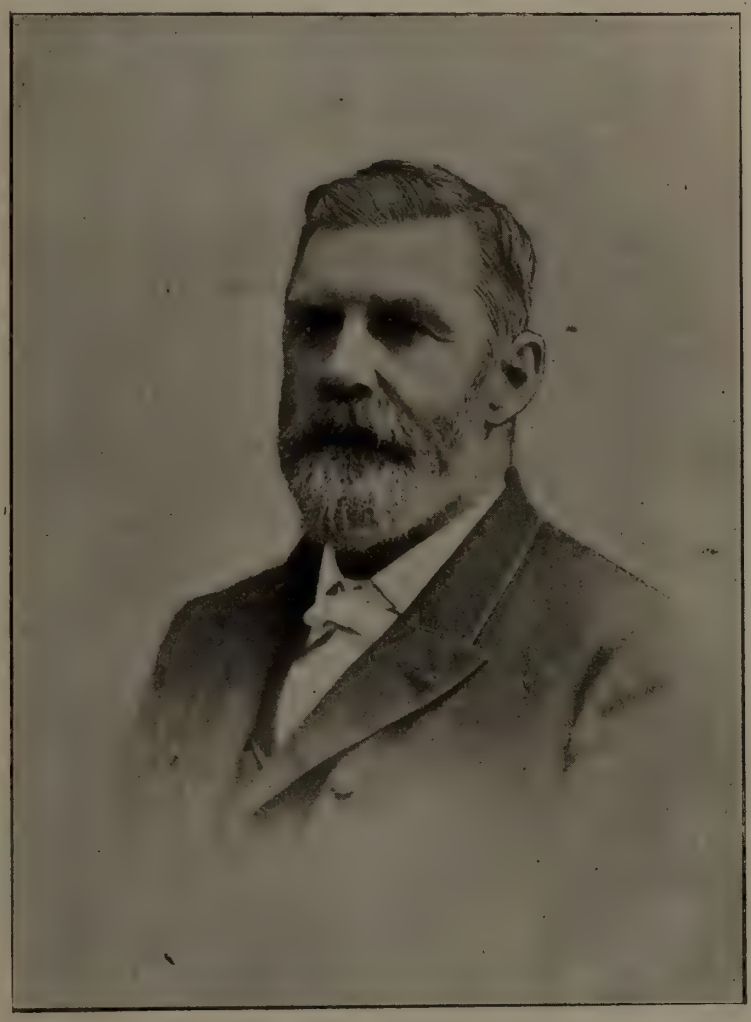
## MR. JOHN CHARLTON, M. P.

As a lumberman and statesman, we take pleasure in placing before our readers a portrait and biographical sketch of Mr. John Charlton, M. P., of Lynedoch, Ont., the worthy representative for North Norfolk in the House of Commons. Born in humble circumstances, but with abundant persevering qualities, he has gradually risen to a high position of honor and commercial status.

The subject of our sketch was born near Caledonia, Livingstone County, New York, on February 3rd, 1829. His father, Adam Charlton, came from Newcastle-on-Tyne to New York in 1824. The Charltons are one of the oldest families in England, and their geographical records in Northumberland date back to the eleventh century. After receiving his education at the Grammar School at Caledonia and Springville Academy, N. Y., Mr. Charlton worked for several years on the farm with his father. At Ellicottville, N. Y., he learned to set type, and spent a portion of his time reading law. In 1846 he made a trip on a lumber raft down the Allegheny and Ohio rivers to Cincinnati, and his later years he has always retained vivid recollections of this five weeks' experience with the rough but warm-hearted raftsmen.

When his father removed to Canada in 1849, Mr. Charlton was 20 years of age. They settled near Ayr, Waterloo County, and four years later, in partnership with Mr. George Gray, he launched out into mercantile life, starting a country store at Wilson Mills, under the style of Gray & Charlton. Their combined capital was about $1,800, including the cost of the building which they erected. The country being yet sparsely settled, pine timber was abundant, and the firm shortly after starting business engaged in the timber trade in connection with Smith, Westover & Company, of Tonawanda, and by dint of economy and industry were eminently successful. In the year 1859 Mr. Charlton sold his interest in the store at Wilson Mills and took entire charge of the extensive Canadian timber business of Smith & Westover. Two years later, in conjunction with Mr. James Ramsdell, he bought out the Canadian interest of the above firm, and for four years the firm of Ramsdell & Charlton carried on a successful business. He purchased the interest of his partner in 1865, and conducted business on his own account for several years. Since that time he has been associated with Mr. Alonzo Chesbrough, of Toledo, Ohio, and was at one time manager of the lumber firm of Chesbrough & Charlton. Lately he has been associated with his brother Thomas, the firm name being J. & T. Charlton. They have extensive interests at Tonawanda and in Michigan, a sash and door factory being a portion of the Tonawanda business. In 1854 he married Miss Ella Gray, of Lynedoch, where he now resides.

His first connection with politics was in 1872, when he accepted the nomination for the House of Commons in North Norfolk and defeated Aquilla Walsh, after a bitter fight. Ever since he has continued to represent that constituency, being returned at every election. He is a staunch Liberal, and has always taken an active and laborious interest in the House of Commons. In early life he was somewhat of a Protectionist, but now favors a revenue tariff policy, and is a strong advocate of closer relations between Canada and the United States. A fortnight ago he visited Washington, for the purpose, it is said, of negotiating a new reciprocity treaty with that country.



MR. JOHN CHARLTON, M.P.

In religion Mr. Charlton is a Presbyterian. He is of a genial and kindly temperament, but possesses firmness of character and tenacity of purpose. He has a wide knowledge of the resources of Canada, and is recognized as one of the ablest public speakers in the Dominion.

## LUMBERMEN BEFORE THE TARIFF COMMISSIONERS.

THREE prominent lumbermen, Mr. J. R. Booth, Hon. E. H. Bronson and Mr. Robert Reford, gave an expression of opinion on tariff matters before the Commissioners at Ottawa. Mr. Bronson said he was not disposed to demand any changes, but thought the removal of the duty on corn would stimulate the production of pork and thus help the lumber trade. To Mr. Davies' reply as to what proportion of home fed pork was used among lumbermen, Mr. Bronson replied that he used American pork almost exclusively, as a heavier pork was required in their business than was generally raised in Canada. Canadian pork he thought just as sweet and good as any other, but the heavier American pork did not waste so much in cooking. He referred to the agitation to impose an export duty on Canadian logs and pulp wood, and said he would bespeak for the lumbermen a hearing before such action was taken.

Mr. Fielding stated that it had been represented to him that Canadian fed pork had greater success in England than American owing to the fact that corn was not used for feeding purposes.

Mr. J. R. Booth also favored the removal of the duty on corn and pork. He thought it in the interest of the great working class that the duty on pork should be reduced and made as cheap as possible. There was no doubt, he said, that the duty had been placed on pork to benefit the farmer, but he was inclined to think that the duty was a greater hindrance to the working classes than a benefit to the farmers. The present duty is $2 per barrel, and he did not know that Canadian pork was consumed to any greater extent than formerly. He used American pork almost exclusively in his lumber camps for the reason that he could not generally get Canadian pork in sufficiently large quantities when he required it, and also for the reason that Canadian pork did not keep so well. Mr. Booth stated that it would be only fair if pork were made cheaper for our lumbermen. No trade has ever had more reverses to struggle against than the lumbermen, he said, "and very few men have spent their life time in it and not died poor."

Mr. Robert Reford, of Montreal, asked an imposition of a duty on saw logs. He contended that at present the Americans were getting Canadian timber for practically nothing, while the Canadian forests were being rapidly depleted, with nothing to show in return. He had reason to believe that Canadian lumber was sold in Ottawa to Americans at $4 per thousand, or less

than the cost of production. Forests did not replace themselves for years, and some active measures should be taken to prevent depletion. He did not think that the law restricting the size of trees to be cut was enforced. With respect to pork, Mr. Reford said that he considered Canadian pork much superior to that from the States. He had found it a most profitable business, and as for corn, there was much grown around Montreal, and the farmers were increasing the acreage under corn, finding that it could be raised profitably.

## ANDRE CUSHING & COMPANY.

IN a recent issue of THE LUMBERMAN we gave some particulars of the construction and equipment of the large

MR. GEO. S. CUSHING.

saw mill of Andre Cushing & Company at St. John, N. B. In this number we are pleased to present a more detailed description, together with a photograph of the mill and portraits of Messrs. George S. Cushing, Theophilus Cushing, G. L. Purdy and F. H. Jobson.

The mill deserves special notice as being the largest and most modern saw mill in the maritime provinces. The situation is unique in that it is within a stone's throw of the only "Reversible Falls"—very aptly termed by the inimitable Burdette on the occasion of his first visit to St. John—of any magnitude in the world. It is situated on what is called Union Point, on the western bank of the St. John river, just above the railway cantilever and the suspension bridges that span the St. John river where it empties into the St. John harbor, and is a natural mill site, as just behind the point on the upper side is a larger bay, in which any quantity of logs can be held and floated to the mill at any time of the year. Admirable piling grounds and wharves line the upper side of the point, from which vessels take in their cargoes for any port.

Before steam became the recognized power for sawing lumber, some Americans took advantage of the location, and on account of water power to be had during a part of the time—owing to the ebb and flow of the tide giving a difference of twenty-five to thirty feet between high and low water—spent some £80,000 in cutting a channel through the neck of land forming the point, and erected a saw mill with a number of single saws that were operated when the tide suited in sawing the large pine that was common on the St. John river at that time. This mill, however, was not a success, and was abandoned. All that remains of the enterprise is the channel, which is through solid rock, and looks as if it would last as long as water runs.

About the year 1852 the first steam mill was built on the extreme point, about in line with the break of the falls, the firm being Andre Cushing & Co. They had the misfortune to be burned out several times, but each time rebuilt on a larger scale. The last fire occurred in the spring of 1895, and for a time the impression was general that the mill would not be rebuilt, consequently the outlook for the large number of employees was not reassuring. However, as it afterwards transpired, Mr. George S. Cushing, the master mind of the firm for the past few years (the original members of the firm having died some years ago), while not saying much, had kept on thinking and planning, with the result that he purchased the interests of the heirs in the estate—retaining the old firm name—and in the fall of 1895 operations were begun to rebuild on a more extensive scale than ever before.

During the year after the fire Mr. Cushing was not idle; he had large lumber contracts in hand at the time of the fire which had to be filled, in which he succeeded, and, besides, he visited the large saw-milling centres to acquaint himself with all the latest saw mill equipments, and, having decided to rebuild, selected those that seemed best suited to his requirements. Owing to the improved machinery he selected, the old site was not deemed suitable, so he began on new ground altogether, but only a short distance from the old site.

Mr. Cushing's judgment was that the first and most important feature in the new enterprise was the power, the order for which he placed with Mr. James Fleming, proprietor of the Phoenix Foundry, St. John. The power plant consists of two horizontal engines of 250 H. P. each, right and left hand on same shaft, with belt fly wheel 12 ft. x 4 ft., six tubular boilers (three of which are sufficient to furnish steam), set with patent sawdust furnaces. These are all placed in a brick fireproof building, with a brick wall dividing the engine room from the boilers, and the whole separated from the mill proper. In the engine room there is a steam pump for fire protection, and a very complete electric light plant which supplies light to the mill, wharves, pond, yard and offices. The city laid water pipes to the mill and several hydrants are conveniently placed, which, with plenty of hose, would seem to make the fire risk a safe one.

The mill proper is 226x60 feet, three stories high, built on a stone and brick foundation. The power is taken by a double leather belt four feet wide through the side of main mill to a line of shafting running lengthwise of the mill, from which leads belts and gears to drive all the machines which are placed on the floor above. On the same floor as the shafting are the saw-dust, refuse and slab conveyors, the saw-dust going to the boilers and the refuse to a large and long conveyor leading to the fire dump.

The sawing equipment consists of the following: Two band mills made by The Filer & Stowell Co., of Milwaukee, one on either side of mill; one Wilkin's compensating direct action steam gang placed in the centre of mill; two patent parallel gang edgers; patent slab slasher made by the Stearns Mfg. Co., Erie, Penn., which carries eight 42" saws; automatic trimmer, Waterous make, also carrying eight saws. These machines are so placed that with the live rolls and transfers used the lumber and slabs are carried to their respective destinations with very little attention and without a hitch. A planer is placed conveniently near the automatic trimmer so that lumber requiring it can be dressed before going to the yard.

The lath and box mill is in an addition at the side of the main mill, the material for which is delivered from the slab slasher very convenient to the operators, while the refuse is carried back to the main conveyor and delivered at the different points required.

MR. THEOPHILUS CUSHING, Superintendent.

The logs are taken from pond to bed of mill on an endless chain and rolled off on either side by large iron discs eccentrically placed on a shaft under the floor. This shaft is so arranged that it can be turned either way, thus throwing the log to either side as desired.

There are steam canters or "niggers" for both band mills, as well as "kickers" for throwing the log onto the log carriages. All these appliances are of the latest and most approved patterns for their respective requirements.

ANDRE CUSHING & COMPANY'S SAW MILL, UNION POINT, ST. JOHN, N. B.

Underneath the floor, conveniently placed in the centre of log bed, is a steam jump-up saw 60" diameter for cutting the logs to any desired length, and for trimming the ends of logs that are gravelled or "rocked" in driving, thus saving the band saw many a bad tooth.

The filing room is nicely situated one story above the mill floor and equipped with an engine to drive the necessary grinders, toothers, rolls, etc., for keeping the saws in order. The location, arrangement and equipment is very convenient and complete in all its parts.

The building of this mill has put a large amount of money in circulation in St. John, and was a boon to the men employed in its construction as well as to the local founders and machine shop owners who supplied their part of the outfit, some $20,000 being spent in the city of

St. John. The superintendent in charge of construction was Mr. Frank H. Jobson, of Portsmouth, Virginia, who has had a large experience in such work in the United States, and he has admirably succeeded in reaching Mr. Cushing's ideal as to what an up-to-date saw mill should be.

The mill has been running night and day most of the time since early in the summer, and has been a success from the start, which speaks well for the management, to whom this style of mill was comparatively new. The capacity is in the vicinity of 40,000,000 superficial feet per year. Mr. Theophilus Cushing is the general superintend-

MR. G. L. PURDY, Book-Keeper.

ent, Mr. Gilbert L. Purdy the book-keeper, and James S. Gregory chief clerk. The firm are in a position to manufacture spruce lumber for any market, and being wide-awake, shrewd and business-like naturally sell where they get the best returns. Personally Mr. George S. Cushing, the chief member of the firm, is a whole-souled man, whom it is a pleasure to meet. In business affairs his boldness is nicely blended with caution. Of keen reasoning powers, good judgment and decision of character, he easily and quickly arrives at correct conclusions.

## INTERESTING INSURANCE CASE.

Judgment has been given in the long-pending suit of the Katrine Lumber Co. against the different insurance companies to recover the amount of insurance on a saw mill at Katrine, Ont., destroyed by fire last summer.

MR. FRANK H. JOBSON, Millwright and Builder.

The decision is in favor of the Katrine Lumber Co., and is as follows :

Katrine Lumber Company v. The Union Assurance Society, $5,346 25 ; Phoenix Insurance Company of Hartford, $2,775 ; Liverpool, London & Globe Insurance Company, $17,860 65 ; Insurance Company of North America, $5,000 ; Lancashire Insurance Company, $8,285 ; total, $39,266 90. These cases came up for trial at the Assizes at Hamilton, before the Hon. Judge Rose. Mr. Wallace Nesbitt, of Toronto, and Mr. S. F. Washington, of Hamilton, appeared for the plaintiffs ; Mr. D'Alton McCarthy, Q.C., and Mr. H. S. Osler, of Toronto, appeared for the insurance companies. The claims arose out of a fire or fires at Katrine, near Parry Sound, on the 7th and 8th of May last, when the mill and a large quantity of lumber and other property were destroyed, and some cars belonging to the Grand Trunk Railway Co. Mr. J. J. C. Thompson was the manager of the lumber company, and made a statutory declaration as to the loss, that the fire on the 8th of May was caused by embers from the fire of the previous day ; also that the fires were not caused by any wilful act or neglect of his or by his procurement, means or contrivance, or by any officer of the Katrine Lumber Company. The defendant companies claimed that these statements of Manager Thompson were untrue, and that the statements about the fire, loss, etc., were fraudulently made. They claimed that if the fires were not caused directly by Manager Thompson they were the result of his negligence in not having his property properly watched, and they further alleged that his claims for damages were largely in excess of the actual losses. There being a disposition for settlement his Lordship gave counsel time to consult their respective clients, and the outcome was a settlement reached about 5 o'clock, when Mr. Osler stated :—The parties have arrived at an agreement which will involve, in the first place on the part of your Lordship, an order consolidating all the cases into one and treating them as one. In the event of the sum of $38,000, the amount agreed upon to be paid by the defendants to the plaintiffs as the amount of the loss, not being paid within ten days from this date, judgment may be entered against all the companies in the consolidated actions for such amounts as each should bear proportionate to the amounts under the different policies as the sum of $38,000 bears to the losses computed at something over $39,000. And in making this statement of the agreement arrived at to your Lordship, I think it is right I should say something in regard to the circumstances leading up to the payment of the losses at this stage of the case. Shortly after the fire, in May last, a letter, which can only be characterized as a blackmailing letter—I need not specify it more particularly—was sent to the plaintiffs by a man who had occupied the position of yard foreman and general superintendent outside at the mill, making statements and insinuations, and indicating that he had such knowledge as if divulged would implicate the plaintiffs, and particularly the manager of the plaintiffs, Mr. J. J. C. Thompson, as having practically committed the crime of arson, and burning the buildings with the object of collecting the insurance. I do not think I am putting that too strongly as the charge in the letter referred to. It is only fair to Mr. Thompson to say that immediately on receiving that letter he forwarded it to the companies ; that letter was received by the companies from Mr. Thompson, who sent it on with a letter stating as it was but a black-mailing scheme he would take no notice of it, but he thought it right to place it before the companies, so that they might have an investigation if they so desired. The companies did not make the investigation, but other parties who had lost by the same fire undertook an independent investigation subsequent to that. The result of that was the obtaining of statements from a considerable number of witnesses ; these statements were prepared to be signed by these parties, these being witnessed by independent persons, and without passing through the hands of the persons who got them placed in the hands of the insurance companies. These statements professed to carry further the statements implicating the plaintiffs contained in the letter referred to. Further investigation resulted in further similar statements. Upon these statements the defences were placed upon the record and particulars ordered from time to time. The defence and particulars were entirely based on these statements. Since the case has been upon the list, and more particularly yesterday and to-day, I myself personally have examined and cross-examined these witnesses on their statements, and it is only fair to say that in so far as these statements profess to implicate Mr. Thompson in any way the witnesses have contradicted them; they have stated that they were not correctly taken down; in other words, they failed to bear out the statements signed by them and sent to the companies. That having been the case counsel can only say they think the evidence as it now appears to them, and as it would appear if brought before your Lordship and the jury, would show these statements were entirely without foundation in fact, and we are very glad to say that is the case, and that that would be the result of the verdict of the jury there is not the slightest doubt. Upon communication with the companies advising them of that fact the companies have instructed counsel to agree to the payment of the losses, and in saying so I may say the question of the difference of amount between the sum to be paid and the sum claimed is not to be regarded in any way as a compromise. The companies having ascertained the position in that way are paying the amount of the claim, and the amount of $38,000 is agreed upon as the amount of the loss which the companies ought to pay here. I need scarcely add that all charges or allegations of any kind implicating Mr. Thompson in the pleadings and particulars are of course withdrawn, or charges or allegations made in connection with anyone connected with the company.

His Lordship expressed himself as satisfied and directed that an order be drawn up embodying the terms of the judgment and issued.

## EFFECTS OF THE PROPOSED TARIFF.

THE following communication on the proposed lumber tariff appears in the Detroit Tribune :

DEAR SIR,—I notice that an attempt is being made by a large number of lumbermen in the Western and Southern States to have a duty of at least $2 per M placed on lumber entering the United States for consumption. The lumber business is not a new industry, and should certainly now be able to stand on its merits; and I do not think class legislation of this kind can be of any possible benefit to any country. It is a general well-known fact that the lumber trade is in a very depressed condition. There are several causes for it. First, in my opinion it is the very low market price of cereals that has prevailed for several years, which would greatly lower the purchasing power of the country at large. Second, expensive habits have been gradually fostering themselves on the community until they began to exceed legitimate income, and a time for retrenchment has forced itself on the country. Lumber entering largely into any improvements at once feels heavily any retrenchment of the general expenditure. Third, manufacturers of lumber have not fully realized the contraction of the purchasing power of the country at large, and have continued the practice of getting out full stocks, causing a surplus of lumber far beyond the requirements of the market. Being mostly manufactured for home markets, it is not suitable for export, consequently large stocks have been thrown on the market at a figure below the actual cost of production. Under these conditions your lumbermen are looking to their good mothers, the tariff commissioners, to come to their rescue, and hope to enlist their sympathy by saying it is cheap labor and cheap lumber from Canada which is causing all the trouble. What are the facts? I will state a little of my own experience. I have been in the lumber business upwards of 30 years in Canada, and purchased all my stock in our home markets until 1894, when the duties on lumber were removed by both the Canadian and the United States governments. I made a tour through some of the principal lumber districts of your country and purchased a portion of my stock, and have continued to do so ever since. During 1896 I purchased nearly all my stock in Michigan, Minnesota and the Southern States, at lower prices and better suited to our requirements than any we could secure in our own country. A large quantity of lumber is shipped from our country to the United States, but it is principally from our lower provinces to the eastern markets, where the delivery is materially affected by freights. It must be to the advantage of the consumer to be able to purchase what he may require in the nearest market. Should the proposed duty be placed on Canadian lumber, certainly its equivalent will be placed on the export of Canadian logs, which will have the effect of closing a number of your large mills on the border states and stimulate its manufacture in this country. Your manufacturers again would have to meet our lumber in competition in foreign countries. We do not think the difficulties of your lumbermen would be improved by the course of legislation proposed, and verily believe that they might as well endeavor to lift themselves up by their own boot straps as to endeavor to improve their condition by the course proposed.

Yours truly,

CHATHAM, Jan., 9th, 1897. JOHN PIGGOTT.

Mr. E. W. Bennett, of Detroit, states that the Canadians are taking kindly to yellow pine. Last season he executed a Montreal order for eight car loads of 22 × 26 × 36 ft., and also sold 2,000,000 ft. in another Canadian city.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

C. H. MORTIMER
PUBLISHER

CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

**One Copy, Weekly and Monthly, One Year, in advance..... $1.00**
**One Copy, Weekly and Monthly, Six Months, in advance..... .50**
**Foreign Subscriptions, $2.00 a Year.**

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. it ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

***Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.***

## OUR FOREIGN TRADE.

CANADIAN lumbermen have in the past year succeeded in extending their trade with many foreign countries, which, in the face of the depression in the United States, is particularly encouraging. The eastern provinces have catered largely to Great Britain, South America and the West Indies, while the statistics which appear in our Annual Review show that British Columbia is reaching out with success for foreign trade. The largest shipments were made to South America, South Africa, Australia, Great Britain and China. Unfortunately, Ontario has made little apparent advancement in the direction mentioned, apart from Great Britain, although it is quite possible that a larger percentage of our lumber was shipped to the United States for reshipment to foreign countries than heretofore.

Canada is, however, apparently slowly awakening to the necessity of controlling her own export trade, instead of allowing it to be conducted by the United States without any credit whatever being given to Canada. In this connection we note with pleasure the published statement that next season vessels will probably sail between Montreal and Australian points, as recommended by Mr. J. S. Larke, Canadian Commissioner for Australia. At Cape Town, in South Africa, a bureau for the representation of Canadian goods has been established, where every facility is afforded the Canadian exporter.

Until direct steamship lines are established between Canada and foreign countries the development of our foreign trade is likely to be somewhat slow. The difficulty in this direction has been in obtaining profitable cargoes both ways.

As a means of extending the Canadian lumber trade, we commend for consideration the suggestion made by Mr. Haynes, of the Timber Trades Journal, that we should increase our manufactures of wood. The high carrying charges practically prohibit the exportation of low grade lumber, but were this lumber manufactured into furniture, etc., it could be placed upon the foreign market at a profit.

## EFFECTS OF OVER-PRODUCTION.

IN the past the tendency of lumber manufacturers has been to almost entirely disregard the law of supply and demand, and produce a large output without giving consideration to the condition and requirements of the market. In his desire to annually increase the returns from his business, stimulated by the surmise that his neighbor will curtail operations, the average manufacturer has, year after year, continued to operate on a large scale. The natural effect of this has been to depreciate values and to depress trade in general. Owing to the lower prices obtained, the manufacturer finds at the close of the year that, while he may have succeeded in disposing of his entire output, the profits accruing therefrom were so small as to reduce the net receipts to a lower figure than the preceding year, when the volume of business was considerably less. This, in a measure, accounts for the depression which has prevailed in the lumber trade of the United States and Canada during the last few years, although it must be admitted there have been other influential agencies at work. Over-production must of necessity be followed by a weakening of the market. Manufacturers find themselves unable to hold their stock, and consequently, to secure capital, are obliged to dispose of it at a low figure.

A striking illustration of the effect of over-production is shown in the case of birch timber. During the winter of 1895-96, as the result of a firm market for birch in Great Britain, there was manufactured a very large quantity of this class of timber, several small operators entering the field who had not previously taken out sqaare timber. Quebec houses contracted for 18-inch average at 27 cents per cubic foot, for delivery in the summer of 1896. The result was the overstocking of the British market and a sharp decrease in prices towards the close of the season, the effect of which is manifesting itself in the transactions for next year. While 27 cents was freely paid last winter for birch of 18-inch average, the same class of timber has been offered at Quebec within the past two weeks at 22 cents, and refused by buyers. It will require some time for the birch timber market to regain its position, in spite of the fact that consumption is active.

Notwithstanding the above facts, it is encouraging to observe that lumbermen are gradually becoming convinced of the necessity of curtailing operations to a point in keeping with the demand, as is shown by reports which have reached this office from over fifty manufacturers in Ontario. Referring to the extent of operations in the woods, these reports state that the output of logs will be fully fifty per cent. less than last winter. Some manufacturers are not operating at all, while others are putting in a very light stock. These remarks do not apply to the Ottawa valley, where the production will probably be equal to last season, or to the north-western section of Ontario, which supplies the Manitoba market.

This decreased output must have an appreciable effect upon the market, and should the trade of 1897 develop satisfactorily, the over-production of lumber now upon the market will become a thing of the past.

## EDITORIAL NOTES.

THE Dominion Rifle Association have selected plans for the proposed Canadian headquarters at Bisley, to be erected the coming spring. The building, estimated to cost $7,500, is to be constructed entirely of Canadian woods, and should serve to show the adaptability of our lumber for building purposes. Canadian lumbermen should not allow this opportunity to pass without taking steps to secure the erection of a building such as will be a credit to Canada. This may be accomplished by having the finest of woods utilized in its construction.

THE necessity of obtaining as much first-class lumber as possible out of a stock of logs was never more apparent than at the present time. While coarse lumber has been a drug on the market and has depreciated in value during the period of inactivity, the better grades have been in good demand at firm prices. In the case of white pine this has been particularly noticeable. To meet the extreme competition, it is not only necessary to reduce the cost of manufacture in every possible manner, but also to thoroughly study the demands of the market, and endeavo to supply such stock as will meet with a ready sale at remunerative prices. Had more attention been given to this matter in the past, it is possible that the large stocks of coarse lumber now on the market might have been turned to more profitable account.

A COMPARISON for the past fifteen years of the number of sailing vessels leaving Quebec shows how rapid has been the decline of the business of that port. According to J. Bell Forsyth's circular, 459 vessels, with a capacity of 380,186 tons, cleared from Quebec in 1881. In 1886 the number was reduced to 325, in 1891 to 205, and in 1895 to 86 vessels. The season of 1896 is credited with an increase, the total sailings being 103 and the aggregate tonnage 82,622. The number of steamers was also larger, the figures being 90, against 58 in the previous year. While Montreal is likely to maintain its present position as a shipping port, it is quite probable that some of the old-time vigor will be restored to Quebec as a result of the extension of the pulp industry, much of the raw material for which is found in the adjacent districts. Direct rail connection with the west and the improvement of the shipping facilities at the harbor would also assist in this direction.

# THE LUMBER TRADE IN 1896.

REVIEW OF THE BUSINESS OF THE YEAR.—STATISTICS OF THE VARIOUS PROVINCES.—A MARKED INCREASE IN THE VOLUME OF FOREIGN TRADE.

## GENERAL SURVEY.

THE year 1896 was one of unusual uncertainty in business circles. It was a year of political disturbances both in Canada and the United States, and in the latter country the depression to the commercial interests was aggravated by the fact that the adoption of a national monetary standard was made the basis of the election. The lumber trade suffered as a consequence of these conditions. The closing down of industries followed the Presidential nominations across the border, and this in turn caused a falling off in demand for lumber. Large stocks were held at the mills in the white pine districts, and as a result prices gradually weakened, until before the close of the year they had reached the lowest point known for many years. Wholesale dealers were not disposed to purchase on a declining market unless good prospects were presented of placing their stock, and the only lumber which met with ready sale was the better grades. Large failures in Michigan induced still greater caution on the part of purchasers.

The foregoing presents the conditions of the trade so far as the United States market is concerned. The year did not pass, however, without its encouraging features. The depression in the United States was counteracted to a large extent by an increased foreign demand, as will be observed by the statistics of the various provinces published below.

The British market was particularly active, and large quantities of spruce and pine deals and boards from Ontario and Quebec and the Maritime provinces were placed at good prices. A larger amount of thin lumber was shipped than heretofore. The trade is fast declining from the port of Quebec, although the sailings in 1896 show a slight gain over the previous year. The annual report of the Harbor Master at Montreal shows that there were shipped from that port during the year, to the United Kingdom and Continental ports, 219,032,178 feet b. m. of lumber, showing an increase of 50,360,150 feet, and to River Plate, 7,790,166 feet, a decrease of 683,834 feet from the previous year.

The foreign trade of British Columbia was of wide distribution and considerably greater in volume than in 1895. The formation of the Central Lumber Company enabled manufacturers to obtain better prices, but unfortunately the combine has been broken and the market is now in a state of uncertainty. The Manitoba market was firm throughout the year.

Speaking generally, the lumber trade of the year was not characterized by the severe depression which is generally believed. All things considered, it must be admitted that the volume of business was satisfactory. What conditions will prevail in 1897 it is difficult to predict, although indications point to an improvement unless tariff regulations should disturb the market.

## ONTARIO.

The unsettled financial conditions which prevailed in the United States account in a large measure for the depression which characterized the lumber trade of Ontario in 1896. Taking the province as a whole, lumbermen look back upon the year as one of unsatisfactory results and disturbing features. Although the output of logs in the winter of 1895-96 was less than the previous season, and notwithstanding the fact that many mills were not operated, the quantity of lumber placed at the disposal of purchasers was too great for the limited demand, and prices suffered in consequence. The volume of trade compares favorably with that of the previous year, but profits have shown a wide diversity.

Manufacturers in the Ottawa valley catered largely to the British trade, and succeeded in closing contracts in the fall of 1895 for a large portion of their output of the following season at satisfactory figures. In the west, particularly in the Georgian Bay district, where large stocks were held by both Canadian and American pine manufacturers, sales necessarily depended largely upon the United States market. Late in the spring season the demand increased somewhat and continued fair until early in the summer, when the effects of the then approaching Presidential election across the border simply demoralized trade in general. This condition continued until after the election early in November, during which time prices were reduced to almost the cost of production. This was particularly the case in the lower grades of white pine, of which there were very large stocks at the mills. After the election a better feeling prevailed, and sales increased as a result of a desire to obtain stock before the close of navigation, but the improvement proved to be only temporary, and the closing month of the year exhibited little activity.

Our enquiries from manufacturers regarding the season's trade met with a hearty response. From these it is learned that the total output of lumber was slightly less than the previous year. Sales also show a falling off, while 75 per cent. of the replies tell the one story of small profits. Pine stocks carried over at the mills are large, and consist principally of box and common lumber.

In hardwoods a noticeable feature was the enquiry for mixed lots, indicative of the hand-to-mouth policy which purchasers had pursued throughout the year. Maple and elm sold quite freely early in the season, the latter for bicycle purposes.

The shingle trade was not active early in the year, but during the fall there sprung up a demand which pretty well cleared out stocks and placed the industry on a stronger footing.

The absence of transactions in timber limits was a feature of the year. No sales of any importance were negotiated. The sale in Toronto in July of 110 square miles, to close up the partnership existing between Messrs. Beck, McSherry and Spohn, proved almost a total failure. The Ontario government placed upon the market 60,000,000 feet of burnt timber in the Nipissing district, and received satisfactory returns.

The cut of the mills in the Ottawa valley compares favorably with the previous season, being, perhaps, a few million feet less. The production in 1895 was 627,000 feet, while the estimate given below for 1896, although not including one or two of the smaller mills taken into account in the 1895 calculation, places the cut at 614,250,000 feet.

PRODUCTION OF THE OTTAWA VALLEY IN 1896.

| Total | $333,349.02 | $720,228.95 | $569,223 34 | $548,401.52 |

Total, 1895 ..... $2,460,352.23
Total, 1896 ..... $2,170,990.80

The total output of saw logs in the Ottawa valley during the season of 1895-96 was 480,000,000 feet, b. m., and the estimated cut this winter is 375,000,000 feet, or 22 per cent. less than last year. In other sections of the province the production is being curtailed to a greater extent, and probably not more than half the usual quantity of logs will be taken out. With a fair demand a more prosperous season is therefore looked for, although tariff changes may affect the market to some extent.

## QUEBEC.

The trade of the province of Quebec has depended almost entirely upon the markets of the United Kingdom, which have remained firm for nearly every class of Canadian goods. The shipments of pine and spruce deals have been made largely from the port of Montreal, and were slightly less than in the previous year, but prices advanced early in the season, and business was conducted on a more remunerative basis than in 1895. From the United States the principal demand was for spruce wood for the manufacture of pulp.

The following table will show the quantity of

lumber in St. Petersburg standards shipped by several firms from Montreal to the United Kingdom:

| | Ptg. stds. |
|---|---|
| Dobell, Beckett & Co. | 27,490 |
| W. & J. Sharples | 22,134 |
| Robt. Cox & Co. | 13,123 |
| Watson & Todd | 12,821 |
| J. Burstall & Co. | 12,260 |
| McArthur Bros. & Co. | 9,551 |
| A. Lemay | 4,716 |
| Total | 102,095 |

The square timber trade, which must naturally be considered in a review of Quebec operations, has been characterized by a healthy demand, and light stocks are held at British ports in nearly every class except birch. The production of this wood last winter was too great for the demand, and consequently prices have dropped about 3 cents per cubic foot. Contracts for a large portion of the 1896-97 production of square and waney timber have been closed, and the opinion is quite general that no abatement in consumption in Great Britain will take place until after the first six months of the year at least.

A comparative statement for three years of the timber measured and culled by the Supervisor of Cullers at Quebec is as follows:

| | 1894. Cubic Ft. | 1895. Cubic Ft. | 1896 Cubic Ft. |
|---|---|---|---|
| Waney white pine | 2,267,749 | 3,086,469 | 2,870,879 |
| White pine | 838,168 | 273,771 | 316,093 |
| Red pine | 59,053 | 108,601 | 50,609 |
| Oak | 1,256,890 | 1,006,139 | 1,139,155 |
| Elm | 528,761 | 596,137 | 416,625 |
| Ash | 183,626 | 149,077 | 83,749 |
| Basswood | ..... | 659 | 728 |
| Butternut | 276 | 642 | 327 |
| Tamarac | 393 | 554 | 138 |
| Birch and maple | 133,658 | 240,818 | 252,424 |

We are indebted to the annual circular of J. Bell Forsyth, of Quebec, for the following data bearing on the Quebec trade:

The past season has shown a marked improvement in business with the United Kingdom, both in volume and satisfactory results, fully justifying our last year's prediction of brighter times ahead with a probability of some good years of business prosperity. In the United States, the uncertainty that preceded the Presidential election delayed for a time the business improvement, which has since set in with marked benefit to the sawn lumber trade.

Shipbuilding in the United Kingdom is in a flourishing condition, all the yards being very busy with orders for home and foreign account.

Instead of a fast line of twenty knot steamers with Quebec as a summer terminus, there seems some possibility of slower boats being subsidized for Montreal business with Quebec as a port of call only, unless a more active interest is taken by Quebec citizens in this important matter.

Delegates from the shiplaborers met representative shipping merchants, early in the spring, and conceded the use of steam in loading and discharging steamer cargoes, with distinctly beneficial results to the business of the port.

Low water in the St. Lawrence during part of the season has again occasioned inconvenience to Montreal shipping, as large steamers for a time were unable to complete cargo at that port, and had to finish loading here.

WHITE PINE.—Without any great change in the supply as compared with last year, the increased shipments of past season have reduced the stock to much the lowest quantity on record. The estimated production, though probably sufficient for present reduced business, is by no means excessive for anticipated market requirements. The wintering stock, with trifling exceptions, is in the hands of the shipping merchants, who have also bought on contract a considerable portion of the present winter's manufacture.

| | | Supply. | Export. | Stock. |
|---|---|---|---|---|
| 1896 | Square | 316,093 | 4,251,800 | 537,013 Square. |
| | Waney | 2,870,879 | | 1,474,168 Waney. |
| 1895 | Square | 273,771 | 2,838,080 | 1,090,892 Square. |
| | Waney | 3,086,469 | | 2,254,717 Waney. |

RED PINE.—The stock is very small and manufacture has almost ceased. The price obtainable for this wood in markets of the United Kingdom has of late years been quite inadequate.

| | Supply. | Export | Stock. |
|---|---|---|---|
| 1896.... | 50,609 | 139,160 | 82,069 |
| 1895.... | 108,661 | 326,080 | 154,120 |

OAK.—An active demand in the United Kingdom has stimulated the export, and reduced stock under last year. The quantity wintering above Quebec is unusually small, being only 25,000 feet, as against 300,000 feet at Garden Island and Collin's Bay last winter.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1896.... | 1,145,564 | 1,382,880 | 637,348 |
| 1895.... | 1,006,139 | 869,560 | 790,486 |

ELM.—The present strong demand, with active shipbuilding, will no doubt continue. The wintering stock is very small; the production will be moderate, as suitable standing timber is difficult to secure, and the end of next season may see an absolute scarcity.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1896.... | 416,625 | 501,000 | 78,374 |
| 1895.... | 596,137 | 537,120 | 218,871 |

ASH.—The stock is much reduced, but ordinary wood is not in demand unless at very low prices. Large average ash of fine quality and color will, no doubt, be required as usual to a limited extent.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1896.... | 83,749 | 113,680 | 42,694 |
| 1895.... | 149,077 | 146,360 | 118,127 |

BIRCH.—The markets of the United Kingdom have been oversupplied with cheap wood, sawn and in the log, from the Maritime Provinces, and by heavy shipments of western birch from Montreal. As consumption is good, price is only kept down by excessive production being forced on the markets.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1896.... | 251,430 | 319,200 | 9,470 |
| 1895.... | 240,818 | 200,160 | 5,156 |

STAVES.—Quebec has lost the stave trade, which is now done through United States ports.

PINE DEALS.—Though the business remains largely in the hands of Quebec houses, who control it, shipments are principally made from Montreal, and to some extent from Three Rivers and other shipping points above Quebec. This will continue until Quebec people take the necessary steps to complete the contemplated rail connection with the west, through the Canada Atlantic and Parry Sound roads. If something is not promptly done in this connection, any action will soon be too late. The cuttings for next season are now all placed at last year's prices, or in some cases at an advance.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1896.... | 657,264 | 400,343 | 142,410 |
| 1895.... | 823,665 | 501,200 | 135,489 |

SPRUCE DEALS.—The marked advance in prices here, which last year we spoke of as certain to come, has taken place. From the strong tone of markets at chief centres of consumption, and from figures obtained for Baltic goods for next year's delivery, still higher figures at no distant date seem almost certain.

The steadily increasing demand for spruce for pulp wood, for which it is unquestionably specially suitable, continues to advance the value of spruce limits.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1896.... | 3,915,455 | 3,828,258 | 573,413 |
| 1895.... | 3,878,142 | 3,471,700 | 736,216 |

SAWN LUMBER.—South American spruce lumber has continued in fairly good demand and business has been active in that wood. Shipments have amounted to about the same as last year, principally from the Maritime Provinces, the Saguenay and the Lower St. Lawrence ports. No appreciable advance over last year's prices has taken place up to the present, but a considerable improvement is looked for next season.

FREIGHTS.—Sail opened at Clyde seventeen shillings, Liverpool nineteen shillings, for timber cargoes, and showed no improvement as season advanced. By steam season opened at forty shillings to forty-two shillings and six pence, Montreal to leading ports in United Kingdom, and advanced towards close of season to fifty shilllngs, and even higher figures paid for small quantities. For timber carrying steamers sixty-five shillings were paid early in season for Quebec loading. Rate for Clyde fell to sixty shillings in summer, but advanced again in fall to seventy shillings and even higher rates.

STATEMENT SHOWING THE QUANTITY AND VALUE OF WOOD EXPORTED FROM THE PORTS OF MONTREAL, THREE RIVERS, BATISCAN AND SOREL, FROM MAY 1ST TO NOVEMBER 30TH, 1896.

| PORTS. | ARTICLES. | QUANTITY. | VALUE. |
|---|---|---|---|
| Montreal | Pine Deals | 57,638 Std. H. | $2,669,557 |

| | Spruce Deals | 3,636 " | 25,488 |
| | Planks, Boards, Etc. | 4,134 M. ft. | 36,760 |
| | | Total value | $ 133,018 |

For the year ending November 30th, 1896, there were brought to the port of Quebec by the Quebec and Lake St. John Railway, 2,925 cars of deals and lumber, 301 cars of pulp, 402 cars of ties, and 2,214 cars of cordwood.

## MARITIME PROVINCES.

The European and South American markets were the salvation of the lumber trade of the maritime provinces in 1896, the depression in the United States causing shipments to that country to decrease materially. To South America the shipments totalled over twelve million feet. Eleven ports in New Brunswick ship lumber across the Atlantic, and the statistics for the year show that the total exports were 366,039,977 superficial feet, an increase of about 95,000,000 feet over the exports of the previous year. St. John shows an increase of 40,000,000 feet, and Miramichi of 24,000,000 feet. Only Bathurst and Shediac are responsible for a falling off in shipments, while some of the ports have doubled their record. Manufacturers of spruce deals report a satisfactory season's trade, better prices being realized throughout the season. Such hardwood as was taken out also met with ready sale. The condition of the shingle trade was less encouraging, depending, as it does, upon the local and United States markets. Prices ruled low, and it was difficult to dispose of stock. The shipments of deals from Nova Scotia also show an increase of 13,791,976 feet over the previous year.

The annual circular of Hon. J. B. Snowball, of Chatham, N. B., furnishes the following interesting statistics of exports from the various ports:

The present winter has been so far favourable, and the prospects are that the output of logs will be an average one for the force employed, which is not larger than last year.

There are two pulp mills in operation here that use about fifteen million superficial feet of spruce logs annually in the manufacture of sulphite pulp.

The goverment of New Brunswick now have 4,536,320 acres of timber lands under license, against 2,780,800 acres in 1892. In the Miramichi section nearly everything available has been taken up, and lands so poorly wooded that they would not be looked at a few years since are now eagerly sought for. Fifteen years ago logs brought to market were not considered of fair quality if it took over eight pieces to make a thousand superficial feet of deals, etc.—now sixteen pieces to the thousand superficial feet is considered fair stock. This, taken with the reduction in our export referred to elsewhere of 27 per cent., looks as if our forests were overworked. I consider the above remarks applicable to all of New Brunswick and Nova Scotia, and that present prices do not bring an adequate return for the forests depleted.

The stock of merchantable spruce deals wintering here is 6,000 St. Petersburg standards against

6,630 standards last year. The stock at present at St. John is estimated to be 20,000 standards.

The export of wood goods to France under the new tariff has hardly come up to expectations. There was shipped from this province this year to France and French Algerian ports 15 cargoes, containing 12,398,000 superficial feet, against 16 corgoes last year, containing 10,240,000 sup. ft.

The general depression in business in the United States last year about stopped shipments to that country, and put a large extra quantity on the British market. As there are signs of business confidence being restored there, we may expect a renewal of shipments, particularly from St. John and Nova Scotia ports, to the relief of other markets.

SHIPMENTS FROM MIRAMICHI FOR 12 YEARS, FROM 1885 TO 1896, INCLUSIVE.

| Sup. Feet. | | Sup. Feet. | | Sup. Feet. | |
|---|---|---|---|---|---|
| 1885—87 millions. | | 1889—110 millions. | | 1893— 83 millions. | |
| 1886—72 | " | 1890— 88 | " | 1894— 96 | " |
| 1887—68 | " | 1891— 72 | " | 1895— 82 | " |
| 1888—73 | " | 1892— 75 | " | 1896—106 | " |

The average shipment for the above 12 years is 86 million superficial feet per year. The average shipment for the 12 preceding years, viz., from 1873 to 1884 inclusive was 118 million superficial feet, an average falling off of 27% in the volume of our business. As we have not any new country to draw on for supplies, this decreased export will have to continue. From St. John previous to 1884 the average shipment was 190,000,000 superficial feet, and since 1884 it has fallen to an average of 146,000,000 sup. ft.

## BRITISH COLUMBIA.

The excellent quality of the British Columbia timber is becoming more widely known each year, which accounts for the substantial increase made in 1896 in exports of lumber to foreign countries. The following table, although not quite complete with regard to the quantity and value of cargoes, will serve to show the scope of distribution:

BRITISH COLUMBIA LUMBER FLEET, 1896.

| Name. | From | For | Cargo Ft. | Value. |
|---|---|---|---|---|
| Crown Prince | Vancouver | Volgaster, Ger. | 776,772 | $13,181 |

It will be observed that there has been a gain of 12 per cent. in the number of ships carrying lumber to foreign markets, while the total tonnage has increased from 76,316 to 93,394. Of the 86 vessels, 39 loaded at Vancouver, 23 at Moodyville, 16 at Chemainus, 4 at New Westminster, 2 at Maple Bay, and one each at Victoria and Vesuvius Bay.

During the year there was also a good local demand, arising from the requirements for mining purposes. Some revival in the shingle trade took place, but unfortunately prices remained very low. Shipments to the eastern provinces kept up well throughout the season.

At the beginning of the year a gigantic lumber trust was organized to control the foreign trade, and to be known as the Central Lumber Co. It embraced nearly all the principal mills on the Pacific coast. The operations of the trust were successful early in the season, and prices were advanced to a remunerative basis. But towards the close of the year some of the members showed a disposition to withdraw from membership, and this finally culminated in the breaking up of the combine, with what result remains to be seen.

In 1897 a still greater foreign trade is looked for. Japan, Europe and South Africa are likely to be heavy purchasers. China is at present making tests of British Columbia timber for railway purposes, and efforts are being made to extend the Australian trade.

## MANITOBA.

An average year was experienced by manufacturers in Manitoba and the Northwest Territories. The demand for lumber was principally from the farmers, who, encouraged by the higher prices received for grain, expended money more freely for improvements to buildings. Had the production of wheat been as great as the previous year, the season would have been one of unusual prosperity. A quantity of lumber was brought from British Columbia, but the main source of supply was the Lake of the Woods district, where the output of logs this winter is being greatly increased, in anticipation of a prosperous season in 1897.

## HE LIKES IT.

MR. S. S. Stevens, Auburn, Nova Scotia, writes: "Enclosed please find $1.00, subscription to the CANADA LUMBERMAN. I received the November number, which I liked very much."

# WOOD PULP DEPARTMENT

## THE DUTY QUESTION.

MUCH attention continues to be given both in Canada and the United States to the question of a duty on pulp wood and the manufactures thereof. The paper manufacturers across the border are urging protection against the importation of both paper and pulp, and this is being opposed by the publishers. Before the Ways and Means Committee at Washington Mr. John Morris, of the New York World, explained that as his paper consumed one-thirteenth of all the the paper used in the United States, or 110 tons on every mill day, he thought he voiced the sentiments of all newspapers. He continued :—"I appear to formally apprise this committee of the fact that the 24 or 25 manufacturers of white paper in the United States are perfecting their arrangements for a combination, and every newspaper shall be at the mercy of a central agency, by which these manufacturers shall receive an additional profit of four or five million a year, and tax knowledge to that extent." The manufacturers, Mr. Norris said, now had a protection of 10 per cent. ad valorem on pulp, and 15 per cent. on finished paper, and were sending their surplus paper to a foreign market, while as the duty on paper was prohibitory, none was imported. The purpose of the trust was to keep the price of paper at about 2½ cts., while the present ruling price was about 2 cents, and by cutting off various concessions to newspaper publishers, increase their profits in that way also. The paper and pulp manufacturers had acquired a monopoly of the best water powers and tracts of cedar for pulp. The possible denudation of the forests might be a matter for Congressional action.

Ex-Senator Warner Miller, of New York, claimed that many of the paper mills were doing business at a loss, and few were making money. He did not believe that Congress would permit a paper to establish a mill on one side of the Sault Ste. Marie and bring pulp across from Canada free of duty. The manufacturers asked only for 15 per cent. on paper, and about $2 per ton on wood pulp, a lower rate than free traders would favor on most commodities. Most of the money invested in paper mills was making less than 6 per cent. interest.

### ANOTHER OPINION.

A writer in the Paper Mill takes exception to Mr. Norris' views in the following remarks: "I want to call attention to one point which would be dangerous if the Ways and Means Committee were to accept Mr. Norris' suggestions. In the course of his remarks, he asserted that if the duty on paper were taken off, Canada would, if necessary, supply the American market. Canada could not, under present conditions, supply the American market, or even sell a pound of paper in this country, even if the duty were removed. In the first place, all the mills in Canada which are manufacturing news to-day would make comparatively little impression on the American market. In the second place, Canadians are even now complaining that American competition there recently has forced the price of news paper from 2¾ cents down to something below 2½ cents in the American market. If Canadian manufacturers are hurt by having the price established at something less than 2½ cents in Canada, how, in the name of all that's good, are they going to sell paper in America at two cents, or less, duty or no duty?

"Canada cannot supply the market to-day; but here is the point to be considered. Canada is contemplating placing an export duty on pulp wood of $2 or $3 a cord. If it should impose such a duty, and the American Congress should place news paper on the free list, modern paper mills would spring up on the Canadian water powers like mushrooms, and in a comparatively short time, the conditions being continued, Canada would be in a position to ruin our industry. With the present disposition on the part of the Canadians, any action on the part of our Congress towards taking off the duty would not be simply in the nature of removing an unnecessary protection; it would be in the nature of throwing down defences and inviting the enemy to come in. It would be strengthening Canada's own policy of protection at our expense. This, however is purely speculative, because happily no such danger exists, but it is a danger to which Pulitzer and Norris would lead us, if they could have their own way."

### A CANADIAN'S VIEW.

Mr. E. B. Eddy, the large Hull manufacturer of paper, pulp, woodenware, etc., appeared before the Tariff Commission at Ottawa requesting a duty of $4 per cord on pulp wood. He said that sixty-nine per cent. of the spruce used for paper in New York came from Canada. Canadian raw material in spruce logs and lumber was being exported from Canada. Canadian forests were being denuded to build up American villages.

At present about a million cords of wood were being exported to the United States, which was worth from $3 to $4 per cord.

Sir Richard Cartwright pointed out that the government returns showed only value for about a hundred and fifty thousand cords. Either the estimate given by Mr. Eddy was greatly exaggerated or the returns were greatly out.

Mr. Eddy replied that the returns were certainly not correct.

## THE DEMAND FOR SPRUCE.

TIMBER cutters in the Adirondacks and elsewhere in this country are now confronted with the unique condition that spruce is worth more in the market as material for wood pulp than as lumber. Spruce is the only wood that is in demand at the pulpmill as well as the sawmill. The cutting of spruce is stimulated by the increasing demand from abroad for American wood pulp, and it is an industry that the framers of the Dingley Tariff bill deemed worthy of protection. If Congress passes that bill, a duty of $1.20 per 1,000 feet will be placed on Canadian spruce.

A recent calculation, made by experts in the lumber trade, shows that at least 65 per cent. of all the spruce cut in the forests of this country this year will go to the pulp mill. The competition of Canadian lumbermen has for a long time been a serious drawback to the profit-taking of American timber cutters, consequently the imposition of a stiff duty on Canadian lumber would meet with eager approval in certain quarters. Ex-Gov. Russell A. Alger, of Michigan, has very large lumber interests in Canada, and while in Montreal, a few days ago, he is said to have expressed the belief that the McKinley Administration would favor a "conciliatory policy" toward Canada. The exportation of American wood pulp to Great Britain, it is said, will probably be largely increased during the coming year, in consequence of a proposed advance in the price by Scandinavian manufacturers. Formerly the Scandinavian wood pulp had a monopoly of the British markets, but the American product has been making headway in that direction steadily for the last few years.—New York Times.

## PULP NOTES.

Five thousand cords of pulp wood are being gotten out on American account by one contractor at Stanhope, Que.

The Dominion commercial agent at Christiana, Norway, describes a new machine which an inventor has placed on the market there, the purpose of which is to wash off, instead of planing off, the bark on pulp wood, thereby effecting a great economy.

The Burgess Sulphite Fibre Company, of Berlin, New Hampshire, is looking about for pulp wood in the province of Quebec. It is offering to contract for spruce pulp wood in lots, large or small, to be loaded on cars and shipped during 1897. Liberal supplies will likely be drawn from about Coaticook.

A company of Buffalo men are said to have decided to establish pulp and paper mills at Petawawa, seven miles from Pembroke, Ont. The Guerton property has been purchased and operations will be conducted on an extensive scale. The Petawawa section is rich in pulp wood of every description.

Mr. F. H. Clergue, President of the Sault Ste Marie Pulp and Paper Company, of Sault Ste Marie, Ont., was in Toronto a fortnight ago. He states that the pulp manufacturers will shortly hold a meeting, and act in concert in requesting the Dominion Government to put on an export duty on pulp manufactures sent to countries which do not allow these goods in on the same terms as their goods are admitted here.

The total output of wood pulp and cellulose in Norway and Sweden amounts to 750,000 tons per annum. There is a disposition towards associated effort in the control of the export trade. The manufacturers of wood pulp in Scandinavia feel that they are doing business on too small a profit, that the possession of immense tracts of forests growing pulp wood, the ownership of valuable water powers, entitles this traffic to a larger percentage of profit.

A pulp wood case came up before the Superior Court of Quebec last month. Garneau, the plaintiff, had made a contract to deliver 2,000 cords of pulp wood to the E. B. Eddy Company, the defendants, the company agreeing to pay him $4 a cord when delivered at Hull, and to advance $1 a cord as the wood was made, laid up and marked to the company. When the plaintiff had about 300 cords piled in the bush he applied to the company for this advance, but they refused, claiming that the advance was not earned until the wood was piled on the banks of the Coulonge, the nearest stream. The plaintiff was depending on these advances to go on and complete his contract, and by reason of the refusal of the company to make them was forced to abandon his work. The judge decided that the plaintiff had established his case, and awarded him $2,000 and costs, finding that the plaintiff would have realized a profit of at least $1 a cord.

## A POINTER FOR YOU.

Messrs. Reid Bros., Hepworth Station, Ont., write: "Would you kindly leave the "200 M. feet Dry Hardwood" out of the advertisement which we have in your paper, as we have disposed of a good deal of it. We find THE LUMBERMAN a good medium through which to find out the wants of the trade.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. III. TORONTO, ONT., JANUARY 27, 1897 No. 4.

**CANADA LUMBERMAN**

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

**Lumbermen visiting Toronto are invited to call at the office of the CANADA LUMBERMAN. We shall have pleasure in giving them any information desired.**

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WANTED.

ONE TO FIVE CARS OF 2½" COMMON AND No. 1 and 2 Soft Elm. Send list, with price delivered on cars at Buffalo. BUFFALO HARDWOOD LUMBER CO., 940 Elk St., Buffalo, N. Y.

WANTED.

BASSWOOD, SOFT ELM, AND MAPLE. FOR particulars, write
THE MASON & RISCH PIANO CO.,
32 King St. West, Toronto.

WANTED

A GOOD SECOND HAND SAW MILL REFUSE burner, about thirty-five feet diameter, seventy feet high. Address with full specifications,
HOLLAND & EMERY LUMBER CO.,
Wahnapitae, Ont.

FOR SALE.

400,000 FT. DRY HEMLOCK LUMBER, 1 and 2 in., mostly sized, from 10 to 24 ft. long. Bill stuff in Hemlock and Cedar a specialty. Apply to
REID BROS.,
Hepworth Station, Ont.

NEW SAW MILL FOR SALE IN ONTARIO

THE OWNERS ARE INEXPERIENCED, AND notwithstanding good local market and favorable situation, would sell cheap. Rail and water transportation. Write
C. P. R. COLONIZATION AGENT,
Montreal.

### CURRENT TRADE CONDITIONS.

ONTARIO

The month of January, now nearing a close, has been one of extreme quietness so far as lumber sales are concerned. Nothing of importance has transpired, and such orders as have been placed were generally for small lots. One or two manufacturers in the Georgian Bay district report a good inquiry for the better grades of pine for spring shipment, and a few orders for hardwoods have come to hand from the United States. Ottawa valley trade is quiet, as is usual at this season of the year. The late snow fall has been much appreciated by lumbermen, who are now vigorously engaged in getting their logs to the streams. Along the line of the Ottawa, Arnprior and Parry Sound Railway a quantity of square timber is being taken out, and it is said very low rates have been obtained for shipment to Quebec. Operators should exercise much discretion lest there should be an over-supply placed upon the market, and a consequent depreciation in values. Quebec houses are now showing little anxiety to contract for timber above that already arranged for.

QUEBEC AND NEW BRUNSWICK.

The lumber trade of Quebec and New Brunswick is up to the average at this season of the year. While devoid of any special features, there is a hopeful feeling among dealers, and the general opinion is that the spring will witness a good demand. A couple of transactions in spruce deals have taken place in Quebec, but the particulars have not yet become public property. The sales made thus far this season have been at a slight advance over last year's quotations. In New Brunswick fears were expressed that there would be a shortage of logs next season, but the late snow storms have encouraged operators. Upon the opening of navigation on the rivers in the spring, shipments to the United States will likely be rushed by manufacturers, in view of the possibility of an import duty being imposed. Wholesale dealers across the border will also stock up to some extent. The Beaver line steamer Lake Superior sailed from St. John last week for Liverpool, with 500 standards of deals.

BRITISH COLUMBIA AND MANITOBA.

The outlook for the lumber business in British Columbia and Manitoba continues promising. An average number of vessels is loading at the principal shipping ports on foreign account, and local trade exhibits some activity. New projects in connection with the development of the mines, such as railways, smelters, etc., come to light almost every day, and if carried to completion, must act beneficially upon the country at large. There has been some cutting in prices by mill men since the combine was abandoned, but no serious results are anticipated, as it is thought some agreement will be reached to prevent further reductions.

UNITED STATES.

The spring demand has not yet commenced to develop, and consequently there is little change in market conditions to report. Considerable lumber is being purchased for export, a fact which would seem to indicate that foreign dealers are taking advantage of the depression in the market to secure supplies at a very low cost. This trade, however, requires such lumber as is easily disposed of at any time, and is therefore not looked upon as adding much strength to the situation. The better grades can always find a market at a fair figure. Notwithstanding the weak demand, manufacturers are holding firm to prices, and in this respect are acting wisely, as the available stocks of dry lumber will be none too great for the requirements of the spring trade. The demand at Buffalo and Tonawanda in the past week has become more general, though the bulk of the inquiries are for fine common and better. There is a little more call for boxing grades. At Albany business is reasonably good, and the building outlook is favorable. In New York the feeling is quite general that there will be much activity in the spring. Wholesalers have not yet commenced to buy, but are laying themselves out for a fair amount of business. The hardwoods show some improvement, but not as much as was anticipated after the turn of the year. In the east oak, ash, maple and basswood are among the leaders. From Michigan there is little to report. The recent snow has permitted of logging being carried on vigorously.

FOREIGN.

A steady consumption of wood goods at the different ports of Great Britain is again reported, and stocks in some lines have become somewhat depleted. A large stock of Canadian goods were disposed of at the recent London auction sales, and this, it is thought, will affect the demand for a few weeks to come. Business is brisk in both ship and house building, and the prospects for the coming season are regarded as hopeful. Several Canadian shippers are scouring the markets, but the results of their efforts have not yet been made public. Owing to the light stocks held, they will no doubt succeed in making good contracts, especially in square and waney pine. Stocks of red pine, oak, elm, ash and spruce are lighter than at the same period last year, and for the latter wood still higher figures are anticipated at an early date. At Liverpool there is a strong demand for hardwoods, and prices have kept up well. Oak is in frequent inquiry at West Hartlepool, and deals, battens and boards are going direct into consumption.

In Australia the strengthening of the market is looked for as a result of an abundant harvest, and higher prices are likely to rule for goods which are in constant consumption.

### STOCKS AND PRICES.

CANADA.

The Gillies Bros. Company, of Braeside, have started a new camp on the Coulonge.

Ritchie Bros., of Aylmer, have 18,000 logs cut at their shanty, and have commenced hauling.

The demand generally in England for Canadian lumber and timber is very good. Spruce deals particularly are firm.

N. McIntyre, of Durham, Ont., is getting out a considerable quantity of square elm and ash timber for the Quebec market.

Scobell Bros., of Cape Vincent, have purchased 2,000 cords of pulp wood along the line of the Kingston and Pembroke Railway.

W. M. Spence, of Port Elgin, N. B., is purchasing large tracts of timber lands in Nova Scotia, east of Halifax, and will go extensively into the lumber business.

J. D. Shier, of Bracebridge, is manufacturing a quantity of waney pine, which is reported as having been sold to a Quebec firm for early spring delivery.

At the Crown Lands office at Fredericton, N. B., a two-mile timber berth was sold last week to Hilyard Bros., of St. John, at $9 per mile, and a two-mile block on Little river to C. D. Dykeman, at the upset price.

It is reported that Gilmour & Co., of Trenton, have stopped making square timber, and will probably only take from 100,000 to 125,000 feet to the Quebec market, instead of 200,000 feet, as originally intended.

Eleven car loads of timber, taken out by William Wilson & Son for E. & S. Malkin, of Orrville, Ont., were shipped from Maple Lake last week for Quebec, over the Ottawa, Arnprior and Parry Sound Railway.

A considerable quantity of birch timber is being gotten out this winter along the line of the Ottawa, Arnprior and Parry Sound Railway, but the English markets are glutted with this wood, and the prices

have fallen very considerably since last summer. Operators who contracted in advance are getting from 2 to 4 cents better prices than they could now get.

The Assiniboine Lumber Co., of Brandon, Man., have a good stock of small dimension stock. They are taking out 4,000,000 feet of logs this winter.

The Standard Oil Company, of Oswego, N. Y., who consume annually from 85,000,000 to 100,000,000 feet of lumber in the manufacture of boxes, will, it is said, purchase a large portion of their supply in Canada this year.

The annual meeting of the Spanish River Boom Company was held at Windsor, Ont., on the 20th inst. It was reported that the company handled 200,000,000 feet of logs during the past season, and that the estimate for the coming season was but 100,000,000 feet.

Messrs. McPherson & Co., of Longford, Ont., are taking out about 20,000 feet of wanny board pine. This timber is hauled out to the track of the Ottawa, Arnprior and Parry Sound Ry., at Ravenswoith, and will be railed to shipping points on the St. Lawrence.

The Parry Sound Lumber Co. are reported as not taking out any logs this season, on account of the dullness of the American lumber markets. If other operators would follow this lead and curtail the production, no doubt the result would be very beneficial to the trade in general.

### FOREIGN.

A compilation of the production of lumber and shingles in the northern pine districts of the United States shows that in 1896 the cut of lumber was 5,538,112,748 feet, against 7,093,398,978 in 1895. In shingles there was a falling off in 1896 of 600,000,000 shingles. The stock of lumber at the mills is less than the previous year by something over 500,000,000 feet.

At Churchill & Sims' last auction sale at London, Eng., a large quantity of Canadian goods were offered, prices ruling as below: Per steamer "Coquet," from Quebec—13 x 3 x 11 3rd pine, £9 10s.; 12 x 3 x 10 4th pine, £6 15s.; 12 x 3 x 8 4th pine, £6 10s.; 13 x 3 x 8 4th pine, £6 5s. Per steamer "Mab," from Quebec—12 x 3 x 11 3rd pine, £9 10s. and £9 15s. Per steamer "Cameo," from Quebec—12 x 3 x 9 1st spruce, £9 and £8 15s. Per steamer "Hannah Blanchard," from Quebec—11 x 3 x 9 1st spruce, £9. Per steamer "Aloe dene," from Quebec—12 x 3 x 9 3rd pine, £8 and £7 15s. Per steamer "Birnam," from Quebec—16 x 3 x 11 3rd pine, £9; 12/15 x 3 x 10 3rd pine, £7 10s.; 12/15 x 3 x 9 3rd pine, £7 10s. Per steamer "City of Lincoln," from Quebec—9 pcs. oak timber, 398 ft., £3 15s.; 9 pcs. oak timber, 430 ft., £3 17s.

### SHIPPING MATTERS.

Steamer Lettie has been chartered to load deals at St. John, N. B., for Liverpool, at 41s. 3d., April loading.

The Nova Scotia bark Antigna has been chartered to load a full cargo of 1,000,000 feet of lumber at Baltimore, for Rio Janeiro, at $10 per thousand feet, and it will probably be the first shipment of the kind to leave there for the intended destination.

The saw mill of the Montague Paper Company at Lake Megantic, Que., was completely consumed by fire on the 21st inst. The mill was valued at $50,000, on which there was an insurance of $29,000.

### PRICES FOR CANADIAN GOODS AT LIVERPOOL.

Sales of Canadian timber and lumber were made in the Liverpool market as follows, as reported by Farnworth & Jardine:

QUBEC PINE: The arrivals have chiefly been the usual contract shipments, but a few consignments have been sold as follows:—

WANEY, 1st class, 45½ feet and 17¾ inches at 2s. 8d. per cubic foot; 20 inches average, at from 2s. 6d. to 2s. 7d.; 15½ inches average, at 22d.; 2nd quality, 20 to 22½ inches average at from 22½d. to 2s.; 16¾ to 19½ inches average, at from 19d. to 20d.

SQUARE PINE 1st class, 32½ feet average cube at 21d. per cubic foot; good fair average at from 20d. to 21d.; fair average at from 15d. to 16d. ST. JOHN PINE, on contract only. DALHOUSIE 15d. per cubic foot. SPRUCE TIMBER has not been imported.

RED PINE.—37 1-2 to 40 feet average cube at from 16d. to 18d. per cubic foot.

OAK, 60 feet average cube at 2s. 7d. per cubic foot; 12 to 14 inches at 2s. 7 1-2d.; 2nd quality, at from 2s. to 2s. 2d.

ELM.—Several parcels 48 to 70 feet average cube, at from 23 1-2d. to 2s. 01-2d. per cubic foot.

ASH has ruled as follows: 15 1-2 inches average at 20 1-2d. per cubic foot.; 14 to 15 inches average, at from 19d. to 20d.; 13 inches average at 17d.

BIRCH.—Of QUEBEC: 19 to 19 1-2 inches average, at from 21d. to 23d. per cubic foot; 18 to 18 1-2 inches average, at from 18d. to 20d.; 17 inches average at 19d.; 16 to 16 1-2 inches average, at from 16 1-2d. to 18d.; 15 to 15¾ inches average, at from 16 1-2d. to 17d. 13 to 13 1-2 inches average, at from 13 1-2d. to 14d. ST. JOHN, chiefly by auction—15 1-2 to 15¾ inches average, at from 16d. to 17¼d. per cubic foot; 14¾ to 15 inches average, at from 15¾d. to 16 1-2d.; 14 1-2 inches average, at from 14 1-2d. to 15¾d. DALHOUSIE; 13 inches average, at 14d. MIRAMICHI: No sales to report. LOWER PORT, 15¼ to 15¾ inches average, at from 12 1-2d. to 14⅛d. BIRCH PLANKS: early in the season, at from £7 5s. to £7 10s. per standard; during the summer, at from £6 to £6 5s., but recovered later to £6 10s. to £7 per standard.

NEW BRUNSWICK &C., SPRUCE DEALS.—St. John, early in the year, at from £6 5s. to £6 10s. c.i.f. and steadily advanced during the season to £7 per standard c.i.f., which is latest sale. Miramichi, Dalhousie, and Bathurst at about same as St. John. Parsboro', (West Bay), Halifax, Campbellton, Grindstone Island, and similar, at from 2s. 6d. to 5s. per standard, and Bay Verte, Pugwash, &c., at from 10s. to 15s. per standard less than St. John.

NEW BRUNSWICK, &C., PINE DEALS.—Miramichi, chiefly on contract, but consignments 1st quality at £13 10s. per standard; 2nd quality at £10 10s.; 3rd quality from £6 10s. to £6 15s.; 4th quality, £5 15s.

SCANTLINGS AND BOARDS (SPRUCE) have been sold with the cargo at the usual reduction of 20s. per standard, but on their merits, at from £5 15s. to £6 12s. 6d. per standard.

PALINGS AND LATHS.—Miramichi pine palings, 4 1-2 feet 3 in. x 1 in., at 110s. per mille. Spruce, 5 feet 3 in. x 1 in., at 85s.; 4 1-2 feet 3 in. x 1 in., at 75s.; 4 feet 3 in. x 1 in., at 65s.; 4 1-2 feet 3 in. x ¾ in., 65s. per mille of 1,200 pieces. Laths (sawn), at 12s. per mille.

QUEBEC PINE DEALS.—The imports have been largely on merchants' account. 1st quality regular specifications, at from £22 10s. to £24 per standard; oddments, at from £17 to £18; strips, at from £17 to £18; 2nd quality deals, at from £15 10s. to £17 10s.; strips, at £12 10s.; 3rd quality deals, at from £9 to £10; strips, at £7 10s; 4th quality deals, at about £7 10s.; strips, at from £6 5s. to £6 10s. Red pine deals, at from £8 to £8 10s. per standard; oddments, at £7 10s. per standard; common quality, at £6 15s. per standard; 1st quality spruce, at from £9 to £10 10s. per standard; 2nd and 3rd quality, at from £6 15s. to £7; 4th quality, at £6 5s.; 5ths and culls, at £5 15s.

### QUEBEC TIMBER LIMITS SALE.

A sale of timber limits took place at the Crown Lands Department, Quebec, on Tuesday, the 26th inst., with the following result:

Lower Ottawa Agency.—Township Beresford; area square miles, 4¾; upset price per mile, $80; price obtained, $80; purchaser, J. H. Nault.

Township Harrington, No. 1; area square miles, 2¾; upset price per mile, $80; price obtained, $100; purchaser, Robert McIntyre.

Gaspe West Agency, Rivere a Pierre, Township Duchesnay, area square miles, 40; upset price per mile, $25; price obtained, $25; purchaser P. E. McConville.

### A MANUFACTURER'S OPERATIONS.

Mr. J. E. Murphy, of Hepworth Station, Ont., writes to THE LUMBERMAN, under date of January 19th, as follows:

"I am trying to put in a million feet of hemlock at each of my mills here and at "Murphy," on the Owen Sound extension of the G. T. R. So far we have had little or no snow. The thaw of last Sunday entirely obliterated the little sleighing we had, and operations are now at a stand-still.

Next to hemlock, I am putting in all the soft and rock elm I can get, the former to be made into barrel hoops; the latter principally for bicycle rims and other bending stock for U. S. points. I have no contracts ahead as in former years, except a few cars hard maple plank and soft elm coffin boards for export, for both of which I am getting satisfactory prices. I am also stocking up largely with cedar tie material, telegraph and electric light poles, and cedar timber and piling. This will be my principal output for 1897. If we get snow enough to permit, I will have between three and four million feet between the two mills. I am carrying over only about $4,000 worth of stock of 1896, composed principally of hemlock dimensions. New stock will consist of birch, maple and spruce, along with those other varieties above mentioned.

I am exercising greater care than formerly in selecting none but good logs at good prices, having learned from experience that second grades of hardwoods are dearer as a gift than No. 1 is at a good round price. Common and cull hardwood continues quite unsaleable. All operations in this section are being conducted on a much more limited scale than formerly, owing principally to the apparent unwillingness of banks to put out money in new advances till old stocks are further reduced."

### LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs; Ottawa to Oswego, $1.90 per M ft., Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5c. per 100 lbs.; Arnprior to Montreal, 7c. per 100 lbs; Parry Sound to Montreal, 12½ cents per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs.: Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts per 100 lbs. Parry Sound. 22c. track, 24c. lightered, per 100 lbs. Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany 17 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway have been made a fixture, as below. Of any intended change due notice will be given lumbermen.

General instructions in shipping by Grand Trunk are embodied in these words in the tariff schedule: On lumber in carloads, minimum weight, 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be charged, and must not be exceeded. Should it be impracticable to load certain descriptions of light lumber up to 30,000 lbs. to the car, then the actual weight only will be charged for, but not less than 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond, to the same destination. For instance, the rates from Tara or Hepworth to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Wiarton to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, but in no case are higher rates to be charged than as per mileage table published on page 9 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navorsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale and Sundridge, to Toronto, 8c.; South River, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 11c. The rates on hardwoods average about from 1c. to 2c. per 100 lbs. higher than on softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other

OFFICES—Lumber District, Albany, N. Y.; 20 South St., New York. Telephone 711 Broad.

PARKER C. RONAN, Manager.

valuable woods, application must be made to the district freight agent.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c; Algoma, Cook's Mills, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Central Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods.

MODIFICATION OF HARDWOOD RATES.

THE Grand Trunk Railway and Canadian Pacific have made the rates on hardwoods from certain points to Toronto and Hamilton as follows. The regulations are over the signature of Mr. John Earls, W.D.F.A., of the G. T. R., and given in reply to a letter from Toronto hardwood men

"After careful consideration we have come to the conclusion that, on and after Jan. 1st, 1895, a modification will be made in the present arrangements for hardwood lumber, to the effect that the rate will be 7½c. per 100 lbs from our Northern and Northwestern branches to Toronto and Hamilton. This rate, however, will not apply from main line points and the straight run between Toronto, Sarnia and Windsor; also that so far as rates on common lumber to points like Guelph, Galt London, Woodstock, Ingersoll, etc., from all lumber shipping stations the rate will be the same on hardwood as on pine." On the old principle, we suppose, that half the loaf is better than none, hardwood men have something, possibly, to be thankful for, though there is no good reason why the rates generally on hardwood should not be as low as on pine. It is understood that the C. P. R. rate will be made uniform at 7½c. from same points.

# THE NEWS.

—Alex. McKay will, it is said, build a saw mill at Rosebery, B. C.

—H. T. Wilson, Franktown, Ont., will erect a saw and shingle mill in the spring.

—M. Brennan & Sons are removing their saw mill from Huntsville, Ont., to Sturgeon Falls.

—R. T. Smith has requested permission from the Ottawa city council to open a lumber yard at the corner of Bay and Queen streets.

—Mr. Eldoras Todd, of Brantford, Ont., is endeavoring to form a company, with a capital of $50,000, to operate a fancy wood-work factory.

—The mills of the Ottawa Lumber Co. at Calumet, Que., closed down on the first of December, after a run of 169 days, during which 210,340 logs were sawn.

—J. M. Taylor, of Portage la Prairie, Man., is making additions to his planing mill and adding new machinery thereto, for the manufacture of sash and doors, etc.

—An exploring party fitted out in October last by the Owens Lumber Co., of Monte Bello, Que., to examine mineral deposits near Lake Innethaka, struck two veins which are said to be the richest in the province.

—The lumbermen of Tonawanda, N. Y., are making a vigorous kick against the scheme put forward by the Grand Island bridge projectors. The lumbermen claim the proposed bridge will greatly interfere with the navigation of lumber rafts. It is probable a large arch bridge or a suspension bridge will be built as a compromise.

—The first load of lumber drawn over the street railway tracks at Ottawa was hauled between W. C. Edwards & Co.'s Lumber yards and the C. A. R. freight yards. The electric locomotive for hauling purposes is not yet ready and a street sweeper was rigged up to draw the lumber. The lumber was piled on an ordinary railway flat car.

—A new tariff schedule, prepared by the government of the Argentine Republic, has been received by the Department of Trade and Commerce at Ottawa. By a fixed valuation the duty becomes specific instead of ad valorem. White pine, unplaned, is valued for duty at 35 cents per square metre, the duty remaining at 15 per cent.; the duty on plain lumber is 25 per cent. on a fixed valuation of 50 cents per square metre.

—A deputation from the counties of Northumberland and Durham waited upon the Dominion Minister of Public Works and requested the removal of a dam in the Trent river, which was constructed fifty years ago, and was formerly used by the Gilmours, Rathbuns and other lumbermen. It was pointed out that the dam was no longer a requisite in lumbering purposes, as the timber areas which the Trent river served were practically exhausted. The Government promised to consider the matter.

—The Serpent River Improvement Company applied to the Ontario Commissioner of Crown Lands for a supplementary charter, limiting the term of the existence of the company to 15 years, or to such other term as the Government might see fit to grant. The application was resisted by Hale & Booth, of Ottawa, who claimed that 15 years was too short for the lumbering firms paying tolls for the improvements. They asked that the term be not less than 25 years, as they claimed that it would take that long to cut all the timber in that section. The Commissioner reserved his decision.

—The lumbermen working in the shanty of Mr. E. J. Doyle, of Ottawa, situated about four miles north of Old Chelsea, had quite an unpleasant and exciting experience recently. The cabin they were sleeping in caught fire, and the flames were well under way before being discovered. The men finally awoke, but it was then so late they barely managed to escape, without being able to save anything. One of the men, Mr. Jno. Brown, who lives at Rochesterville, had his boots burnt and had to walk over a mile through the snow in his bare feet.

—Mr. W. H. Marcon, of the Toronto Hoop and Veneer Company, is said to be arranging for starting a factory at Toronto Junction, where he will manufacture cloth or rolling boards for export to the United States, England, France and Germany. These boards are rolled or veneered off basswood logs, and by this means there is no waste in the cutting, as when sawn. The demand for these goods by woolen and cotton manufacturers is very large, and large capital is now secured to manufacture under the various patents which Mr. Marcon took out some months ago.

—Mr. Adam Beck carries on an extensive business at London, Ont., manufacturing cigar boxes, veneer and thin lumber. The main factory is a brick building, 40 x 80 feet, three storeys high, with a two-storey extension 41 x 42 feet. In the rear are two "Progressive" dry kilns, built after Mr. Beck's own design. He also put in two new power nail machines, a new Leonard Ball automatic engine of 200 horse power, and a number of other machines. The building is heated by steam and lighted by electricity, and fitted with every appliance for the expeditious manufacture of the various lines. Eighty-seven persons are employed.

## CASUALTIES.

—J. Legallais was killed at Glencoe, N. B., by a falling tree, while cutting sleepers.

—A young man was recently frozen to death in the woods while making his way from one shanty to another. He was in the employ of the Gilmour Company.

—George Bushey, of Waubaushene, Ont., was engaged in felling a tree, when it fell in an unexpected direction, breaking his leg and severely injuring his spine.

—While working in a mill at Grand Mere, Que., a man named Tontout was caught by a planer, which literally tore one arm from his body, causing death shortly after the accident.

## PERSONAL.

Mr. Angus McLeod, lumberman, of Bracebridge, has been chosen by the Conservatives to contest North Ontario for the House of Commons.

Mr. C. Berkeley Powell, of Ottawa, a director of the Upper Ottawa Improvement Co., was a successful candidate for alderman at the late municipal election.

Mr. James Russell Elliott, of London, Ont., was recently married to Miss Emeline Williams Mills, daughter of Nelson Mills, the millionaire lumberman of Marysville, Mich.

Mr. Alexander Sutherland, at one time an extensive timber merchant, died at Canifton, Ont., late in December. He was 73 years of age, and a native of Caithness, Scotland.

Mr. Thomas Bryce, lumber merchant, of Toronto, although unsuccessful in securing election as alderman for ward 2, received a gratifying support, coming in as fifth man.

Mr. David McLaren, of Ottawa, left early in January on a trip to Australia. He is largely interested in the British Columbia saw mills, and will endeavor to learn the requirements of the Australian timber market.

Mr. John Heard, sr., of the firm of John Heard & Co., spoke and heading works, St. Thomas, Ont., died early in January, at the age of 74 years. He was born in Devonshire, England, and came to Canada 50 years ago.

Ex-alderman Crannell, secretary of the Bronsons and Weston Lumber Co., made a strong fight for the mayoralty of Ottawa, being defeated by a small majority. There were three contestants, and Mr. Crannell was second in the race.

Mr. Thomas Meredith, of Yorkton, N. W. T., was recently in Ontario renewing old aquaintances. He conducts a retail yard in the town named, dealing in Douglas fir, red cedar shingles and white pine, and reports trade increasing as the result of better prices for farm products. Dressed fir retails at $28 to $30, and rough boarding at $17.

American lumbermen are beginning to consider economical methods. Several have already discovered that the saw is preferable to the axe in felling trees. Another important step is to prevent waste in slabs. This can be minimized by adopting a common European method. Generally in America a log is squared and then sawn into boards of the same width. In Germany the log is not squared, but sawn directly into boards. These boards are sorted according to their widths. The two edges are then sawed separately. This is a slower but more economical method.

## REMARKS OF A BANKER.

In an address before the Canadian Club at Hamilton, Mr. B. E. Walker, manager of the Canadian Bank of Commerce, referred to the question of forestry. He regretted that our timber lands had already been denuded of oak, elm, sycamore and walnut, the former wood being now imported from Minnesota. In white pine, however, Canada was in the lead. There was no white pine outside of America, with the possible exception of Siberia, and though in the aggregate there was a large quantity left in Michigan, Wisconsin and Minnesota, the great bulk of the world's supply was in Canada. What we had would last for 100 years if any care was taken of it. The belt commenced at the southern edge of Algonquin Park, and moved west and north to the Gatineau, Coulonge and Black River districts. In the latter localities it was rapidly reproducing itself. The Rainy River pine, although coarse and small, was also worth a great deal. The most valuable timber asset we had, however, was the spruce timber. Reproducing itself as it did, it was practically inexhaustible, and, in addition, it was of a much better quality than that which grew in Europe. Canada already supplied Europe with timber for pulp for the best paper, and the next step should be to make the paper itself here. The British Columbia forests, with their immense trees, could not literally be said to be inexhaustible, but the quantity was so great that that was practically the case. This timber in British Columbia was a very good example of the third class of available raw material before referred to—that which could not now be profitably made use of on account of its geographical position. Mr. Walker also advocated the adoption of a forestry system. Something besides ranging was necessary to guard against the danger and results of fire.

## PRESERVATION OF TIMBER.

Observations upon the preservation of timber have shown that the more warm and humid the atmosphere, the more rapidly the wood deteriorates, also that timber felled in winter is more durable than that felled in summer, and that timber raised in cold climates is more durable than that raised in warm climates, while the best timber is produced on meager soil. When under water, the most lasting woods are oak, alder and pine, the least so being birch, linden and willow; in the air, timber is exposed to the ravages of insects, this being the case with sap wood more than the hardwood; woods rich in resin, like the elm and poplar, are not so much troubled as those like the alder, willow, birch, yoke, elm and red beach, which have an abundance of sap and are rapidly deteriorated. Timber construction which is protected from heat and humidity is only endangered by worms, and, on the contrary, that which is in a damp and badly aired place injures by rotting, which is really the result of microscopic vegetable growths. The primary cause of the decay of wood is the presence of albuminiod substances in the sap and incrusting materials, these naturally affording nourishment to insects and microscopic vegetations and their destructive work.

"Advertising is to business what steam is to machinery—the grand propelling power."—Lord Macaulay.

# THE RETAILER AND Wood-Worker

## A LONDON RETAIL YARD.

THE largest retail lumber yard in the "Forest City" is that of Kernohan, Webster & Ferguson, situated at the corner of York and Ridout streets. The individual members of the firm are Messrs. G. N. Kernohan, R. J. Webster, and A. Ferguson, each of whom are energetic and enterprising business men. They keep constantly on hand a large stock of lumber, lath, shingles, cedar posts, etc., and being situated in close proximity to the Grand Trunk Railway, the shipment of lumber is greatly facilitated. Owing to their extensive trade, they are enabled to supply stock at short notice, and during the building season the yard presents a continual scene of activity. The business has been conducted by the present firm since 1893, but in that comparatively short space of time they have established a wide connection.

## BUYING GOODS ON CREDIT.

THE following suggestive extract is taken from an address delivered before an association of credit men by Mr. Henry Wollman, of Kansas City:

"Suppose a man comes to you and says he wants to buy goods on credit. You say to him, "Well, how much can you sell?" He always puts it high enough. "All right; put that down. How much profit can you make?" He always makes that high enough. Find out whether he thinks the profit is on the basis of the selling price or the cost of the goods. You will always find that it is really on the cost, but he thinks it is going to be on the selling price. Figure it out either way and put that down, and then you have the gross amount that he can make. Now, then, add up the items of what he tells you his expenses will be, and then deduct one from the other; but be sure you don't let him fool you or himself on the item of expense. When he tells you that he is going to live on $30 or $40 a month, when you know that nobody else in his circumstances does, don't believe him, but be sure that you get it reasonably correct, and then figure a little something for interest that he is going to pay for borrowed money during the year—he never thinks of that—and be sure to take something out for depreciation in value of the goods at the end of the year—you will find out that he never figures in advance that his goods are going to depreciate at the end of the season, and then see if you can't determine for yourself that that man, if he is a beginner, is or is not going to be a good and safe risk. You will find that nine times out of ten, if you will take his own figures for it, you can see that, without knowing it, he has demonstrated to you in advance the impossibility of his succeeding."

## CHANGING METHODS.

IT has been quite a study with me for a long time whether or not we should confine ourselves rigidly to one rule, or system, or style of doing things in planing machine practice, either in fastening belts, setting and grinding cutters and knives, or, in fact, anything that pertains to planing machine work. In the matter of fastening belts, we read how a great many lumbermen seem so devoted to the worship of one system that, like the ancient martyrs, they would hold onto it if they had to sacrifice their lives to maintain their cause and show faith in their system.

It is all very well to be firm in any faith, but to this faith we must add a consistency, to show that it is correct in practice as well as in theory.

Anything to be valuable must be practical, and if it lacks the element of usefulness, it will sooner or later be lost in the sea of oblivion.

But many old theories die hard, if they ever entirely go out of existence. There are persons so absorbed in belt lacings that I believe if they were shown some other style of fastening infinitely superior in every way to lacings, they would still use them. That they are good in their place no sane person will attempt to deny, but that they are the best in every place it seems as if in these days of progress no one will be so obstinate as to affirm.

The same may be said of every known device for fastening belts, from the poorest to the very best.

Let me show you an instance. Quite a few years ago I was in a place where at 4 p. m. I was obliged to cut the lacings to a twenty-inch three-ply belt. Every day this was done, and when the engine stopped at 8 p. m. that same belt had to be released with new lacings, which were made by cutting two strings from the longest part of a large hide. Now those who are posted in the cost of hides can probably figure out how much these strings cost.

In this case, however, the cost was not an item, as "Uncle Sam" footed the bills, but the point to be made is all the same. There is but one belt fastening that could fill the bill under the conditions, and that is the Blake's belt stud. If we had had the oo Blake stud, they could have been re-used day after day almost indefinitely and the cost of two lacings a day could have been saved. That same stud was in use then, but we were intensely wedded to lacings and there was no officer or lawyer who could divorce us from it.

I simply bring in this single case to show that in all ordinary cases we can and should adjust ourselves to cases and conditions, and not be so riveted to an idea that we can, among the great multitude of good things, find but one to which we can resort.

It has not been a long time since all anchors were got up by the slow process of the windlass and the "Yo heave O." Since the general introduction of steam a better and quicker way has been found, and sailors are forgetting the old hoisting song "the good old way."

Now, while I am an intense believer in the Blake belt stud, I believe there are many places where even leather lacings are better, and better adapted to the work. I believe in riveting in nearly all heavy belts, but I don't believe that in every case lapping and riveting is the best way. There is a steel hook on the market that drives through and clinches on the inside that I think a good deal of. These are made in several lengths and sizes, and for double and single belts, and in many cases I would use them. Often a belt in breaking tears straight or very nearly straight across. It is as tight as it will bear now, and we cannot cut for hooks or even lacing, but we can butt the ends together and use these steel fastenings, which can be done in very little time and is a very strong fastening. Often we get a belt torn part way across and these fastenings are admirably adapted to these places.

The common flat steel hook is also very good in some instances, and I always keep an assortment on hand to use where they suit my convenience better than anything else.

I have used wire lacings and they make a very even, quiet-running belt, but I do not keep them in general use.

I have spoken more at length on belt fastenings, because there is a much greater variety of places and conditions where they can be used, and are used, to good advantage. The point to be made is, that it is not good policy to be confined to one particular system when it is so much better to have several methods to resort to.

Now, in the matter of knife grinding and setting, it is in my opinion not policy to confine yourself to one style, especially if you have different kinds of work to do on the same machine.

On common, ordinary white or yellow pine I should grind a fairly generous bevel. If the stock was kiln-dried, I should use a shorter bevel, and in some cases I would bevel both sides. The under-side bevel makes one of the best-known chip breakers and saves using the lip of the cylinder, the style employed by some of setting the knife back into the head.

I often do this on kiln-dried yellow pine with the best results, and, while it does nice work, it also serves the lips on the cylinder, which I think is a good thing that every planing machine man ought to attend to, for when they get so worn that shavings drive under the knives, bad results often follow, and a broken machine is not always a desirable thing to have on hand. The trouble about this grinding business is that a great many concerns think that any more than two sets of knives is an expensive luxury, and not to be allowed only under the most urgent circumstances.

I believe in keeping a rack full of knives, a good, long half-dozen sets, more or less.

It is not good policy to use up a set or sets of knives clear up to the slots before ordering new ones. Old knives may do for light work, but when heavy stock is in the mill, no one wants to stand and feed a machine for fear the knives will go up the blower spout. And not only this, but

you want knives that you can grind for the different kinds of work that come to hand.

In the matter of side cutters two lumbermen should not confine themselves to any one style. If they do they will many times find they are in the condition the slang phrase "get left" so nicely expresses.

Shimers are good. Solid bitts are very good, but you are not in fine shape for everything that comes along till you are well fitted up with three part bitts. The three kinds taken together with a few spare heads gives you a confidence in yourself that you are fully prepared for business of any kind. In bench sawing, too, a good variety and style of saws is just what is necessary to do all kinds, and to pinch yourself here is to spite your face by biting your nose off.—John Shaw, in Lumber.

## NUMBER AND ARRANGEMENT OF CYLINDERS.

REPLYING to the question "How should lumber be dressed?" referring especially to the number of cylinders and their relative arrangement, a correspondent of Sawing Wood says: "That depends. If the lumber is sawed with a circular, two cylinders placed most any practical way would surface both sides well, for the reason that any ridges left by the saw teeth would extend more or less lengthwise the board, and give some bearing all the time under the first cylinder. If the lumber be band or gang sawed any ridges —and there are many—would run across the board, and while the opposite face between these ridges is being dressed it is poorly done, because that space does not lie on the bed. Hence, if I were to select a double surfacer for doing fine work on both sides of band sawed lumber, I should require three cylinders, two upper and one lower. The first cylinder on this kind of lumber can not possibly dress it smoothly, for reasons given above, but could give a comparatively even surface to rest on while being dressed on the other side by the next cylinder. This cylinder would do smooth work because of the fine bearing the lumber would have, and would, of course, give a perfect foundation for the third or finishing cylinder, which would operate on the face first operated upon, and give as a result two perfect faces.

"Some people advise running lumber face down. Of course it makes no difference in surfacing only, but when matching it is difficult and unnatural to run flooring face down, as you never can see what the machine is doing until the board is completely out of the machine, and then you must turn it over."

## DRYING LUMBER.

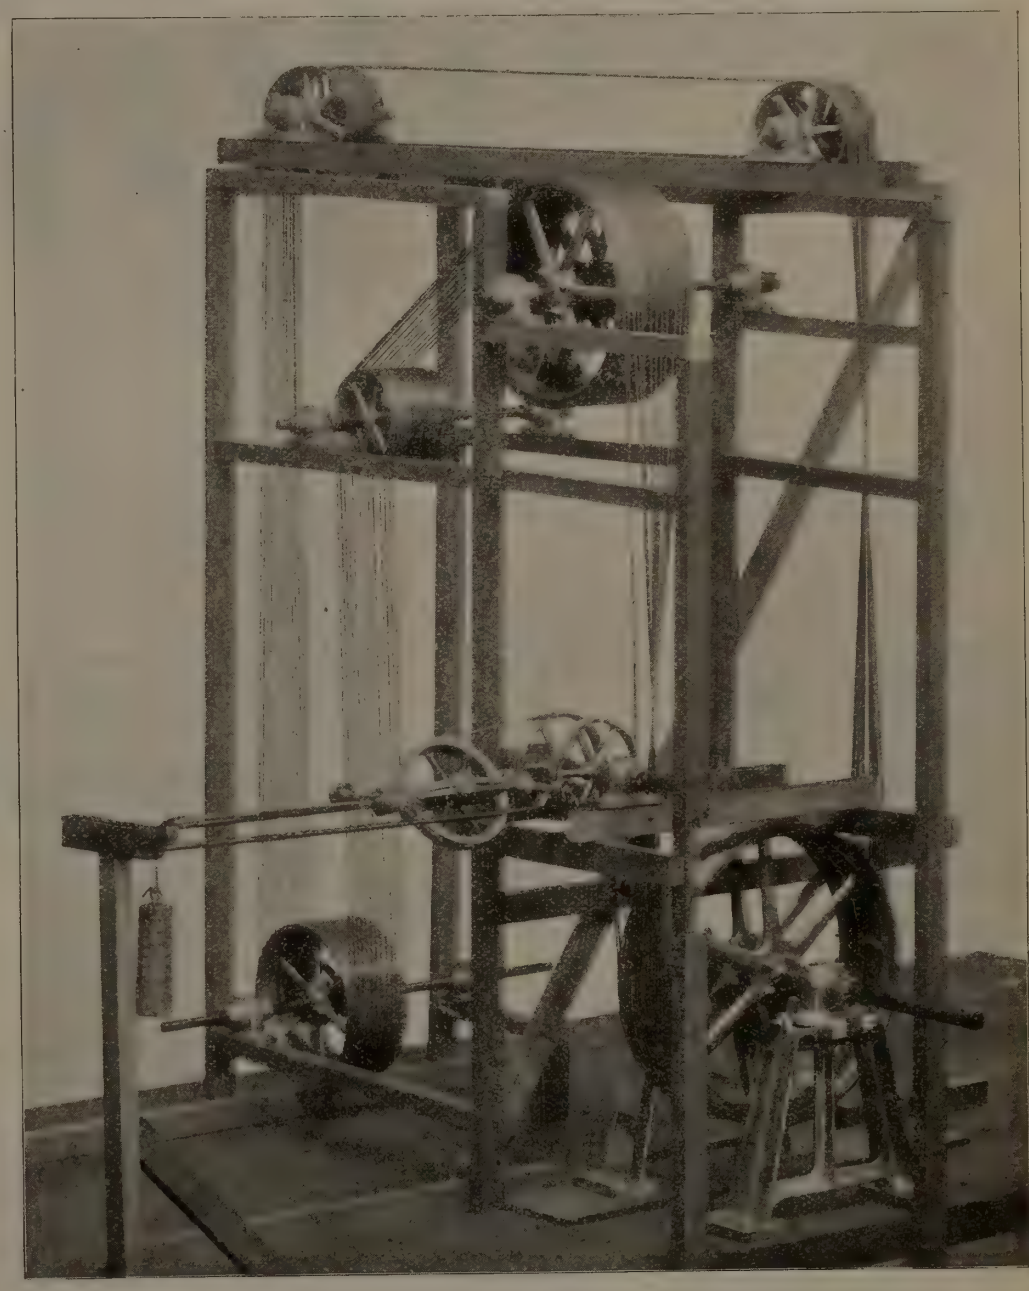
A SUBSCRIBER of THE LUMBERMAN wishes to know the best way of drying lumber in a kiln by means of a stove. If any of our readers have experimented in this direction, we would be pleased to learn the results of their efforts.

## ONE OF THE BEST.

MESSRS. Reid Bros., Hepworth Station, Ont., in renewing their subscription to THE CANADA LUMBERMAN, write:—"We consider THE LUMBERMAN one of the best papers we get, and would not be without it."

## ROPE TRANSMISSION.

THE illustration given below was taken from a model of the Dodge Patent American System of Rope Driving, designed to transmit power as required in a large mill, and at the request of the mill owners designed to avoid the use of the ever-troublesome and expensive gearing which would be necessary to otherwise accomplish the results herewith successfully attained. This illustration demonstrates the simplicity with which a shaft may be run at right angles to the driver, and with little or no loss of power. It is a well known fact, however, that with gears there is a great loss of power from friction, and many other disagreeable points of contention; also, with a belt and set of mule pulleys, there is great loss by imperfect contact of the belt with the pulleys, journal friction, and other annoyances sufficient to condemn it. On the contrary, with the manilla-rope system, under the Dodge patents, a shaft may be driven at right angles to another with the same efficiency as two parallel shafts are ordinarily driven.



DODGE PATENT AMERICAN SYSTEM OF ROPE TRANSMISSION.

This drive is peculiar to itself; the double right angle driving being a feature not frequently brought to notice. The driver on the engine shaft makes 70 R.P.M., operating the transmission in either direction, and carries fifteen wraps of one and one-quarter inch manilla rope to the driven sheaves, both at right angles to the driving sheave on the engine. The first driven sheave is 36 feet above the center of the engine shaft, makes 90 R. P. M. and transmits two hundred H. P. The second right angle drive is six feet below the center of the engine shaft, makes 140 R. P. M. and transmits three hundred H. P. The arrangement of the ropes is nicely shown in the illustration and needs no further explanation.

The travelling carriage or automatic slack rope take up, (one of the valuable features of the American System of transmitting power) in this case is of the horizontal type. The idler sheaves near the rope tightener carry up and over to the travelling carriage, and are so placed that this carriage always keeps the rope at an even and correct tension (governed by the amount of weight used, see left of illustration), so that the rope will always follow the grooves, and is thus carried to and from the driven sheaves and the driver, always keeping its alignment. The tension weight serves a double purpose in taking care of all slack caused by stretch of the rope or by atmospheric changes, and by keeping a continual and proper tension on the rope.

In the United States, during the past ten years, rope driving has gained a wonderful precedence. Its former opponents have been convinced of open merits and are now the strongest advocates of this system of transmitting power. Belting has its place; driving by means of ropes has its place in mechanics. The latter, however, has two great advantages over the former: the first, the ease with which it overcomes any of the knotty problems frequently met with in power transmitting engineering; the second, its great cheapness as compared with any system of belting or gearing. A rope will always do the work of a belt, but there are, in daily operation in all portions of the United States, rope drives doing excellent work which, if replaced by any combination of belting, would simply evolve a most disastrous failure.

The very low first cost of rope transmission is an indisputable fact, and likewise is the cost of maintenance where the drive is designed and erected by parties whose trade mark is formed by long experience and excellent workmanship. Dodge Manufacturing Co. have designed, manufactured and installed rope transmissions of their Patent American System for the past twelve years, and the success of their work is now depicted in every state in the Union.

The merits of this system are, its simplicity, great efficiency, cheapness, and wonderful saving in journal friction as compared with gears or a heavy belt with mule pulleys. The sole manufacturers in Canada are the Dodge Wood Split Pulley Company, 74 York street, Toronto.

## THE CARE OF LOW GRADE STOCK.

HARDWOOD saw mill men are apt to neglect the proper care of cull and mill cull stock when they shut down for the season. In many a yard that has been shipping through the fall, all the culls and mill culls that have been thrown out of better grades can now be found scattered in promiscuous piles all along the alleys and in the rear of the stacks, often criss-cross between piles. In many instances where the low grades have been wanted to ship, it has appeared easier for the foreman to go to regular piles already made rather than take the trouble to pick up and sort over the miscellaneous rejects thrown out in shipping.

This is all wrong and a waste of stuff which, if it is worth anything is worth taking care of, as by neglect, carelessness and exposure to the weather, what was pretty good shipping culls may easily be reduced to mill culls, and what was good, saleable mill culls may as easily be rendered worthless for shipping.

In all well regulated saw mill yards there is some one whose business it is to see that all rejects from the regular piles during each day's shipping are picked up, sorted to the proper lower grades, and if not wanted for shipment on orders already booked, are run to the appropriate pile and stacked. Some parties make special piles for these outs as they are generally rather better than the average grade made in sorting the green lumber, and buyers some times prefer them sufficiently to pay 50 cents or $1 more for them.

Cull and mill cull oak gets worse very rapidly if thrown into promiscuous piles and allowed to remain for even a few days, if the weather is wet or snowy or very hot. This is a matter that is too often neglected by the saw mill man, who cuts only from 5,000 to 15,000 feet a day, and as he plugs on year after year, he wonders why his business does not show any profit over and above a bare hog and hominy existence.—Hardwood.

## A PACIFIC COAST SPLINTER.

PACIFIC-COAST slabs and slivers are gigantic things. For example, in New Whatcomb, a seaport town and the county seat of Whatcomb county, the north-west county in Washington, and in the United States, is erected on the outer edge of a sidewalk on one of the principal street corners an immense slab or section of one of Washington's biggest red fir trees. The slab, being cut directly across the diameter of the tree, like a butcher's cutting-block, is set on edge, the greatest diameter extending upward, the bark being on its entire circumference. A stranger naturally feels inclined to walk up to the slab and measure it by his height, and he is surprised to find that it would take another man standing on his head to extend to the top of it. Then he steps back a pace and reads the following inscription, neatly printed on a board attached to the face of the slab: "Tree from Loop's Ranch Whatcom county, Washington. The tree was 465 feet high, 220 feet to first limb, and 33 feet 11 inches in circumference at the base. If sawed into lumber it would make 96,345 feet. It would build eight cottages two stories high, of seven rooms each. The tree is about 480 years old, according to the rings. If sawed into inch-square strips it would fill ten ordinary cars, and the strips would reach from Whatcom to China." The section shows the tree sound to the core.

### HARDENING SAWS.

Saws are generally hardened in mixtures of oil, tallow, wax, and other substances, says the American Manufacturer. It should be noted, though, that the hardening mixture loses its properties after a certain time of continual use. The saws are heated in long furnaces and then dipped in horizontal position with the tooth edge into long troughs filled with the hardening substance. As soon as the saw is cooled sufficiently, it is taken out and wiped lightly with a piece of leather, so as to remain still greasy; then it is placed over a bright coke fire until the grease coating inflames and has burned off with a bright flame. This burning off produces the necessary elasticity.

A good hardening mixture is obtained by melting five quarts of train oil, two pounds of tallow and a quarter pound of beeswax thoroughly together. This mixture is excellently adapted to hardening all kinds of steel. By adding one pound of resin heavier articles can be hardened, but care should be taken that the proportion of resin is not exceeded, as otherwise the objects may become too brittle and crack. If the saws are too especially hard, only a part of the grease coat is allowed to burn off; if softer, more. In the case of springs, burning is allowed to continue until the flame goes out. If the objects are of irregular thicknesses, the burning process is repeated, altogether or partly, until there is reasonable assurance that the object is of equal hardness at all places.

## QUEBEC CROWN LANDS.

THE report of the Commissioner of Crown Lands for the province of Quebec, covering the year ending June 30th, 1896, shows the total receipts from that source to be $1,045,310.19. Of this amount forest lands account for $951,098.92, an increase over the previous year of $178,763.36. Timber dues amounted to $705,260.31, ground rents to $143,485,73, bonuses to $83,255.20, and transfer bonuses to $4,239.47. The following is a comparative statement of the timber manufactured during the last two years, as compiled from the commissioner's reports:

| | 1895 | 1896 |
|---|---|---|
| Pine at 26c. per 200 feet | 276,808,800 | 307,195,720 feet B.M. |
| Spruce at 13c. per 200 feet | 213,237 200 | 270,156,800 " " |
| Small pine logs | 64,293,753 | 110,650,844 " " |
| Boom timber | 2,541,230 | 417,016 " " |
| White pine | 156,569 | 1,443,354 cubic feet. |
| Red pine | 2,131 | 3,788 " " |
| Birch, etc | 12,032 | 40,785 " " |
| Cedar, etc | 256,208 | 203,193 linear feet. |
| Firewood | 8,712 | 7,953 cords. |
| Pulp wood | 7,712 | 11,79 " |
| Spool wood | 3,907 | 5,074 " |
| Railway ties | 330,155 | 300,311 pieces. |
| Lath wood | 177 | 109 cords. |
| Shingles | 13,754 | 3,082 M. |
| Hemlock bark | 969 | 202 cords. |
| Rails | 7,870 | 20,563 pieces. |
| Telegraph poles | 2,503 | 1,550 " |
| Pickets | 12,967 | 14,877 " |
| Knees | 544 | 8 " |

It will be observed that there has been a considerable increase in the production of pine, spruce and pulp wood, while shingle manufacturing has been reduced from nearly fourteen millions to slightly over three millions.

Mr. Paul Blouin, Superintendent of the Woods and Forests Branch, reports that the season of 1896 was an exceptionally dry one, but owing to the activity of the forest rangers no serious fires occurred. Fifty-six fires were extinguished by the staff, most of which resulted from settlers clearing lands, others from lightning, a few from sportsmen neglecting to properly extinguish their camp fires, and one from a passing train.

---

The London Timber Trades Journal says: Many curious discoveries have been made in the saw mill when opening logs, both animate and inanimate objects having been found in the interiors of trees, and the saw somtimes meets with strange obstacles. At Messrs. D. Norton & Sons' saw mills, Wharf road, City road, some time ago, when cutting some swamp oak shipped at one of the ports of a southern state of America, the saw encountered some hard metal objects in the centre of a log, which proved, on examination, to be the iron heads of tomahawks, or some similar weapons. Search was made in the other logs and several more weapons were found. The wood had grown twelve inches or more in thickness over the missles, which must, therefore, have been imbedded in the wood for very many years—probably before the white man invaded the forest solitudes of the new world.

THE PARMENTER
PATENT DRY KILN

For Drying LUMBER
Staves, Heading, Shingles, &c.

The Latest
The Cheapest
And Best

CHATHAM, ONT., June 19th, 1896.

JAS. S. PARMENTER, Flushing, N. Y.

DEAR SIR: We take very great pleasure in being able to say from nearly one year's use of your Patent Dry Kiln, we find it away ahead of anything we ever yet tried for thoroughly drying lumber without injuring it in the least. So far we have found exhaust steam alone sufficient for our purpose, so that it absolutely costs us nothing to run it. We thoroughly dry white oak, rock elm, balm and other hardwood lumber in less time than we ever did with a blast kiln, and especially find it a splendid kiln for drying white oak hubs. It does its work so naturally that neither hubs nor lumber are injured by it.

CHATHAM MFG. CO., LTD.

## WHY BAND SAWS BREAK

SIXTEEN REASONS, AND HOW TO AVOID THEM

Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking: analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner of properly setting irregular teeth is described. In connection with the treatise is a history of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, **ONE DOLLAR.**

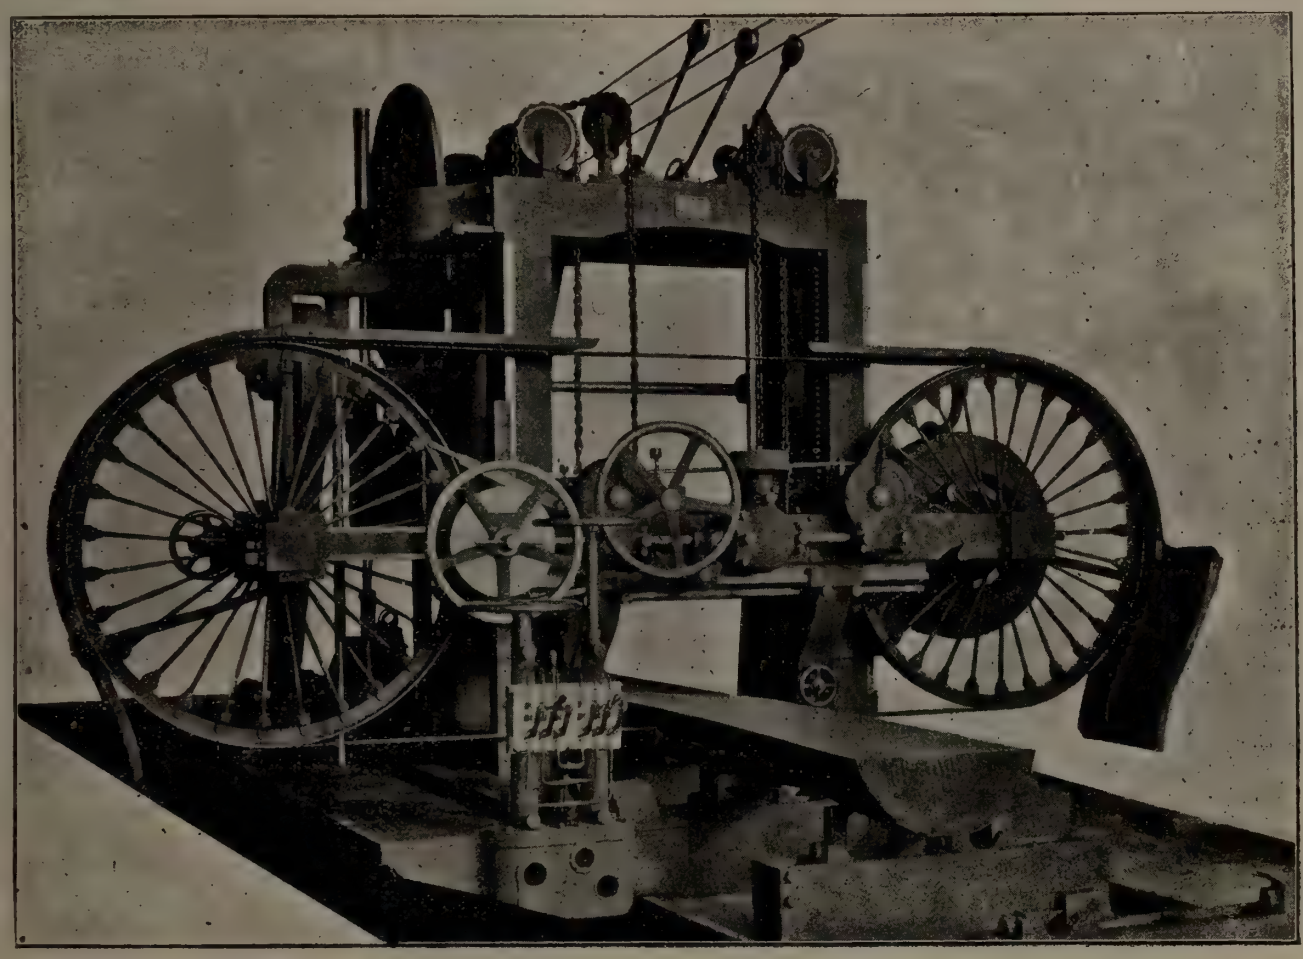
## AN ELECTRICALLY-DRIVEN BAND-SAW.

THE application of electricity for saw mill purposes is rapidly coming to the front. At a recent exhibition at Geneva one of the interesting features was a horizontal travelling band-saw at work, as shown in the accompanying illustration. This saw was designed for sawing logs of timber of any length. The frame is made to travel, while the log is fixed on the foundation floor. This kind of saw requires more space than the ordinary one, but works without interruption, as, owing to the length of travel, while the machine is working on one log another one can be prepared and set at the other end of track. The machine is driven by two independent three-phase motors; one of them of 6 h.p., running at 810 revolutions, is set on the platform of the travelling frame, and provides for forward and backward movement. From the motor pulley the movement is transmitted by a belt to a larger pulley, and then by a worm and wheel gear to a friction wheel fixed on a vertical spindle, that can be moved radially on a large disc, thus permitting the operator to vary the rate of travel of the frame, as the movement is transmitted from this shaft to the driving wheels by means of a vertical spindle and two conical gears. The return movement is very rapid, attaining a maximum speed of 47 ft. per minute. The reversal is obtained by a double conical friction gear. The forward movement can be regulated at will; the minimum speed is 3½in. per minute. The other three-phase motor of 16 h.p. is direct-coupled on to the spindle of one of the band-saw pulleys, and drives it at a speed of 480 revolutions a minute, the band saw attaining a linear velocity of about 125 ft. per second. To allow of a vertical movement of the saw frame, and of a lateral shifting of the pulleys for tightening the band-saw, the connections of the motor to the trolleys are made by means of three flexible cables. The vertical downward movement of the saw is regulated by a dividing disc, so that the boards can be cut of equal thickness. Every movement of the saw can be directed from the frame platform by hand wheels.



AN ELECTRICALLY-DRIVEN BAND-SAW.

## POWER LOST IN SHAFTING.

SOME interesting experiments were conducted recently by C. H. Benjamin, Professor of Mechanical Engineering at the Case School of Applied Science at Cleveland, to determine by actual observation in factories of various kinds just what loss occurred through friction in transmitting power by belts and shafting from the engines to the driven machines. The figures of loss must prove startling to factory owners, and they will also serve as a guide to engineers.

The observations were made in sixteen factories, each engaged in a different kind of work. The method of making observations was as follows: During the day-time, when the works were in operation and the machines were running, indicator cards showing the work being done by the engines were taken each hour. Then during the noon hour or at night, when the engines were driving only the shafting, similar cards were taken, and when these and the first ones had been averaged, the difference between the power required to drive the shafting alone and that required to drive the whole shop was found, and this reduced again to a percentage. The most startling loss was found in a bridge material factory, where the shops were spread over a lot of ground. Eighty per cent. of the engine's power was lost in the shafting there. In a planing mill the loss was 73 per cent.; in a sewing machine factory it was nearly 70 per cent. It was 77 per cent. in a stamping mill and 65 per cent. in a boiler and machine works. The average loss for heavy machine shops was found to be 62.3 per cent. The average for light machine work was 55.1 per cent., and in but one instance did the loss fall below 47.3 per cent.

In this one case the percentage of loss was so small that it must serve as a serious commentary upon the character of the work generally done in putting up shafting. This was in a steel screw works, and the loss was only 14.5 per cent. In this factory the machinery is all of the automatic type, very compactly arranged, and the shafting had been put up in the most careful manner. The shafting was in perfect alignment, and ran in hard cast-iron boxes without babbitt metal. It is supported by very rigid hangers, and was oiled by hand instead of wick oilers.

The results of these observations were presented to the American Society of Mechanical Engineers, at its recent meeting, in a paper by Prof. Benjamin, and tables were given which showed the number of feet of shafting run in each of the factories under observation and other features of the test.

One explanation of this immense loss of power, Prof. Benjamin says, is economy in either the quantity or the quality of the oil used. This cuts down the apparent size of the bills for shop expenses while the coal and water bills go piling up. A saving could probably be made by using electricity for transmitting the power.

## VIEWS OF A MICHIGAN LUMBERMAN.

MR. ARTHUR HILL, OF SAGINAW, PRESENTS SOME STRONG ARGUMENTS AGAINST THE IMPOSITION OF A DUTY ON LUMBER.

THE Hon. Justin S. Morrill, Chairman of the Finance Committee of the United States Senate, received a pamphlet letter a fortnight ago from Mr. Arthur Hill, of Saginaw, on the question of the proposed imposition by the United States government of a duty on foreign lumber. Mr. Hill is an extensive operator in the Georgian Bay district, as well as a large holder of Canadian timber limits, and is therefore thoroughly conversant with the lumber business on both sides of the border. The letter is written from the standpoint of an American, and deals with the question "How shall we treat Canada, as an enemy or as a friend?"

At the commencement Mr. Hill protests against any change in the present wood schedule which shall directly or indirectly prevent the free entry into the United States of the white pine lumber of Canada. Referring to those who are pressing for this legislation at Washington, Mr. Hill says:

"They press for it on the ground that it will be prohibitive; so that the Mississippi producer of pitch pine may extend his markets and his profits; so that the Pennsylvania producer of hemlock may force consumers to use hemlock when they want white pine; so that the lumberman of Minnesota may send his white pine into New England, 1,200 miles away, and make the New Englander pay the added freight. At the recent lumbermen's convention at Cincinnati these long-distance lumber dealers pointed out that the railroads should aid them at Washington, as the railroads would get this added freight."

In describing the movement which culminated in this Cincinnati convention, Mr. Hill says that the chief ally the lumbermen had was the hard times and the great distress into which the lumber business had fallen, and the assertion that the cause of all this depression was the influx of free Canadian lumber, and that to prohibit Canadian lumber would cure the evil. To show that the afflictions of the United States lumbermen do not come from the invasion of his markets by Canadian lumber, Mr. Hill quotes the importations of lumber into the United States since 1889, the year before the McKinley bill reduced the duty from $2 to $1 per thousand, with lumber duty free since 1894, as follows:—

| | Feet. | |
|---|---|---|
| 1889 | 747,842,000 | $7,804,163 |
| 1890 | 659,703,000 | 7,744,954 |
| 1891 | 757,149,000 | 8,498,046 |
| 1892 | 663,134,000 | 7,539,766 |
| 1893 | 742,351,000 | 8,717,331 |
| 1894 | 514,461,000 | 6,134,204 |
| 1895 | 600,809,000 | 6,859,532 |
| 1896 | 786,102,000 | 8,504,607 |

The explanations given by Mr. Hill to account for the state of things complained of by the lumber manufacturers of the United States are interesting. He says: "The obvious cause of the prostration of the lumber industry is a natural falling off in consumption during three years of national business depression, which has not been met by any corresponding reduction in output. The editor of The Timberman, a most able statistician, who made one of the principal addresses before the Cincinnati convention, stated incidentally his estimate of the amount of pine, spruce, hemlock and so forth used in construction in this country in 1892 at 16,000,000,000 feet, and the amount used in 1895 at 12,000,000,000 feet. Here is a shrinkage of 4,000,000,000 feet, or 25 per cent. of the normal consumption. This is an amount substantially equal to the entire production of white pine west of Chicago, including Wisconsin, Minnesota, and the entire Mississippi Valley, during the year 1895, which was 4,100,000,000 feet. It is a shrinkage equal to nearly 60 per cent. of the white pine product of the entire Northwest in 1895, which was, for Wisconsin, Minnesota and Mississippi river, 4,102,000,000 feet; for Michigan, 2,923,000,000, and for Lake Erie mills and others in that region, 68,000,000 feet, equal to a total of 7,093,000,000 feet.

"In the face of this shortage in annual demand of 4,000,000,000 feet, the lumbermen gathered in Cincinnati and resolved that the way to re-establish prosperous market conditions was to put a duty of $2 per thousand on the 700,000,000 feet of lumber which has been coming from Canada into New England and New York for these many years, whether there was a high tariff, a low tariff or no tariff against it. It has been coming because the people of that section wanted it—needed it—and even the superior white pine of Michigan has been unable to supplant it in its natural markets."

Regarding the claim that it is the character of the lumber imported from Canada rather than the quantity to which objection is raised, Mr. Hill asks: "Has the importation of an average of less than 700,000,000 feet of Canadian lumber during the six years following the tariff act of 1890 been able to fix the price in the United States on an average white pine cut of nearly 8,000,000,000 feet, and an approximate cut of 8,000,000,000 feet of other merchantable timber? This question answers itself. The quality of the Canadian importation has somewhat declined since 1890, but it has not deteriorated proportionately with the product of other white pine sections, nor faster than the consumers are adapting themselves to the use of commoner grades of lumber in place of the superior grades, which are fast vanishing from our markets."

Mr. Hill then proceeds to point out the fact that Canada has sought for closer trade relations with the United States, and has increased her purchases from that country, while Canada's sales to the United States have not increased proportionately. He urges that the United States should open her markets to the products of the Canadian forests, and gives the following table as showing the percentage of imports into Canada:—

| | United States. | Great Britain. | Other Countries. |
|---|---|---|---|
| 1885 | 45 p.c. | 40 p.c. | 15 p.c. |
| 1890 | 46 p.c. | 38 p.c. | 16 p.c. |
| 1895 | 52 p.c. | 30 p.c | 18 p.c. |

"Take note that the gain to the United States is entirely at the expense of British trade. This trade revolution is explained in the following statement of the imports into Canada for 1895:—

| | Dutiable. | Free. | Duty. |
|---|---|---|---|
| United States | $26,000,000 | $29,000,000 | $7,000,000 |
| Great Britain | 23,000,000 | 8,000,000 | 7,000,000 |

"In these three lines the reason for all that has happened can be read. Canada has been measurably opening her markets to the United States and measurably closing them to England. She taxes England $7,000,000 for bringing into her markets $31,000,000 worth of goods, and the United States no greater sum for bringing in $55,000,000. Canada collects, too, a higher average duty on dutiable goods received from England than on dutiable goods from this country."

Mr. Hill presents figures of the trade the United States does with Cuba, Mexico, Central America and South America, and shows that Canada was a more valuable market in the year 1895 than all these other countries put together for the products of the United States. Yet, he says, Canada is the one country which it is proposed the new tariff bill shall distinctly legislate against in the article which forms the chief import into the United States from Canada—lumber. What now, he asks, would be the trade situation as between the two countries if lumber was taken off the United States free list and put into the dutiable list? and gives the answer as follows: "The United States received from Canada in 1895 $36,000,000 worth of goods, of which $15,000,000 worth were dutiable and $21,000,000 free of duty. Put a tariff now on rough lumber and it will transfer $8,000,000 from the free list to the dutiable, reducing the free list to $13,000,000, and this would be the trade situation: Canada buying $55,000,000 worth from the United States, admitting free $29,000,000; and the United States buying $36,000,000 worth from Canada, admitting free only $13,000,000."

The cost of producing lumber is next dealt with, and is shown to be greater in Canada than the United States. "The average cost, including stumpage, of delivering logs at Ottawa, the main point of output in Canada, is at least one dollar more per thousand than the cost of American logs at Saginaw, Menominee, Duluth or Minneapolis. The assertions to the contrary were good ten years ago, but not to-day. With the exhaustion of pine in lower Michigan, where Saginaw alone for 30 years furnished an average of of 700,000,000 feet, and with the reduction and final abolition of duties on lumber and logs, American lumbermen have entered the market for Canadian timber; stumpage has advanced; wages have advanced; until now American conditions, as to cost of timber and cost of labor, absolutely prevail in the white pine sections of Canada."

With respect to the timber supply he says:

"Michigan, for years queen of the white pine states, is fast losing that mantle of green that was the source and token of her royalty. Michigan forests supplied in 1890 nearly 4,500,000,000 feet of lumber. In 1895 they furnished only 2,900,000,000 feet of lumber, and during 1896 they have produced less than 2,000,000,000, and the signs of complete exhaustion, as to white pine, are plain before us. Michigan lumbermen, to continue the business to which they were bred, have been compelled to go to Canada to replenish their stock of timber, at once convenient for operation and suited to their trade. No other timber fills the place of white pine, as witness England's constant demand for it, with all the lumber markets of the world to draw from.

"The great, the main, reason why Canadian white pine should not be excluded from our markets is because of the present forestry conditions in this country. There is not standing to-day in the state of Michigan 8,000,000,000 feet of pine, and there is not standing in the states of Wisconsin and Minnesota 50,000,000,000 feet of white pine, or in the three states, 58,000,000,000 feet. I point you now, sir, to the fact that the annual statement for 1895 shows that the cut of these northwestern states for the ten years ending with that year was 77,000,000,000 feet, and you can draw your own conclusions.

"My first conclusion is that to now legislate to take this timber west and south of Lake Superior and send it into remote New England is to perpetrate an economic crime upon those great treeless states. And this is my second conclusion: that to compel the people of New England to pay an added freight on lumber from the remote northwest, when their natural supply lies near at hand and cheap of access, is to do every citizen a wrong who builds a roof for home or factory. If that citizen pays the tariff tax, then he stands as to every other builder in this land on an unequal footing.

"I have shown that our trade relations with Canada are reciprocal and friendly. Canada has so framed her tariff laws that British trade loses and American trade gains. Shall we now, while Canada opens wider her doors to American trade, shut our doors in her face, and, if we do, what will be the result? It was recently stated in the leading newspaper of the Dominion that if the United States, in the face of present fair treatment by Canada, should now enact tariff laws unjust to Canada, they must protect themselves by tariffs, too—turning first to their own people for articles now bought of us, and next towards closer relations with Great Britain, their natural ally, and in war and peace their friend. You, sir, are far abler than I to decide whether this prophecy be true, and, if true, its effect upon our trade."

---

Mr. Thomas Pink, of Pembroke, Ont., manufacturer of lumbering and driving tools, boom chains, cant hooks, etc., has issued a new and useful catalogue for 1897, showing the various lines of manufacture. Mr. Pink has established a wide reputation as a manufacturer of lumbermen's tools, and his goods are now used throughout the whole Dominion. A copy of the catalogue will be sent upon application.

Logging is progressing favorably in the vicinity of Warren, Ont., although there is not a great deal of snow. On Tuesday, the 16th inst., Keeling & Bower had one team draw to their mill, a distance of three miles, a load of logs containing 21 pieces, that scaled in all 8,443 feet. The sleigh and bunks used were the same as they are using every day, the latter being only 10 feet long; had they been longer they claim a much larger load could have been hauled.

The new man in the shop is subjected to much criticism and scrutiny, but he very often has several handy kinks up his sleeve which raise him in the eyes of the older men. This makes it rather risky to indulge in any sarcasm as to his way of working till you know how much work he can do in a day; he may paralyze the old method when it comes to time.—Machinery.

Parties who have been experimenting with white maple for bicycle rims have met with such success that that wood will be pushed for the purpose in competition with rock elm. Maple has been a favorite in some quarters ever since the introduction of the wood, but rock elm has so many points of excellence that it is not probable it will be crowded out.

There is an estimated area of 47,000,000 acres covered with marketable timber in Australia. Western Australia has 20,000,000 of these acres. The various saw mills in the last named section employ about 2,000 men and the total output of sawn stuff in 1895 was nearly $2,000,000. The two principal woods are the jarrah and karri, of which considerable quantities have been exported to European countries—England principally—of late years.

## PRESENTATION FROM LUMBERMEN.

The regrets at the removal of Mr. James Webster from the position of Superintendent of the Northern and Midland Divisions of the Grand Trunk Railway have been many, by both the public and the press, and to some extent give an idea of the high regard in which he was held. It was not long before a tangible expression was given, when on Friday, 22nd January, a few gentlemen at the head of some of the great lumbering companies of the north called upon him at his residence at Allandale, Ont., to ask his acceptance of a beautiful cabinet of sterling silver, accompanied by an address, expressing their feelings towards him as a business man, with whom they had dealings for many years.

Mr. Wm. Thomson, of Longford, read the the following address :

Jas. Webster, Allandale.

Sir,—We, the undersigned, having heard with regret of your removal from the office of Superintendent of the Northern and Midland Divisions of the Grand Trunk Railway, to perform other duties, desire to acknowledge in some way our appreciation of your services in connection with our business as shippers over the divisions under your charge. We have always found that so far as was perfectly consistent with the interests of the railway company whom you served, you have been ever ready to accede in the kindliest way to our business requests. We beg of you to accept the accompanying oak cabinet of sterling silverware as a small token of the esteem in which we hold you as a business man of sound principles, strict integrity and sterling worth ; and we trust in after years these mementoes may bring to your mind pleasant recollections of our business relations during the past number of years. Trusting that you may long be spared to a wisely-directed and happy life.

The Georgian Bay Lumber Co.,
W. J. Sheppard, President.
The Victoria Harbor Lumber Co.,
John Waldie, President.
The Longford Lumber Co.,
Wm. Thomson, President.
Jas. Playfair & Co.
A. McPherson & Co.
Burton & Bro.

The address is elegantly illuminated, the border having some excellent scenes of the mills of the companies referred to, and is handsomely framed.

The cabinet, which was transferred to Mrs Webster by Mr. Playfair, is a model of beauty, being of highly polished oak, having three shelves, containing many sets of forks, spoons, with ladels, scoops, etc., etc., all of sterling silver, and the possession of which under such circumstances any one might well be proud of. On the silver plate was the inscription :

"To James Webster, Esq., from a few of his lumbermen friends on the Midland and Northern Divisions of the G. T. R. Allandale, January, 1897."

Nothing was known of either the intended presentation or the visit, and Mr. and Mrs. Webster received so genuine a surprise that to make an adequate reply was difficult ; in fact Mr. Webster admitted he was not equal to the task, but expressed his high appreciation of their friendship and good wishes, which were so kind, and their generosity, which was so great.

The quiet and pleasant way of making the presentation was particularly acceptable to the recipients.

---

A rather curious accident recently happened at a Wausau, Wis., box factory. A rapidly revolving pulley burst into small pieces right in the midst of numerous busy workmen, and, scattering in all directions, failed to injure any one.

## A LOG SLIDE.

A novel plan for removing spruce pulp wood from the steep declivities of the famous mountain peak known as " Old Whiteface," in the Adirondacks, has been arranged. This peak is one of the highest and most imposing mountains in the Adirondacks, and many tourists have climbed to its summit because of the magnificent view of mountains and lakes to be had there. The peak lies just north of Lake Placid, and is 5,000 feet high. Saranac and Mirror lakes are near by.

Such is the steepness of the side of this mountain that until now no lumberman or pulp man has begun operations there, although all down the side of the immense pile grows spruce in immense quantities. But operations are soon to be begun on an immense scale, to denude the great mass of its growth of spruce, by the J. & J. Rogers Company, of Ausable Forks.

The company's plan will make it comparatively easy to get wood where heretofore it has been an impossibility. A large force of men is now employed in constructing a slide, or flume, from the mountain side to Ausable River, just below the big falls in Wilmington Notch. This slide is 2½ miles long, three feet wide and three feet deep. It is constructed of two inch plank, and is supported by a wooden trestle, which in many places is from 60 to 100 feet high. In several instances the flume rests on stringers, spanning ravines of great depth. The oulet of the flume at the river is 50 feet above high water mark, at a place where the streem is narrow and deep and hemmed in on either side by perpendicularl edges. The water of Whiteface Brook is diverted from its natural channel into the flume, and the wood is put in all along the line for a mile down the mountain. A stick of spruce wood 18 inches in diameter, started at the upper end of the flume, will travel the distance to the river in 7½ minutes.

The undertaking, however, has aroused the provincial press to decry against the sin of spoiling the Adirondacks and the mountain scenes therein by denuding them of their timber. This is rather amusing to paper makers, who use only spruce anyway, and the provincial press would seem to hold the opinion that there was no other wood than spruce to be found in the Adirondacks.—The Paper Mill.

---

Commission merchants in session at Boston, Mass., adopted the following as the standard apple barrel ; seventeen and one-half (17½) inches in diameter at the head and twenty-eight and one-half (28½) inches in the length of the stave, with the usual bulge in the centre.

## CIRCULAR RE-SAWING MACHINE.

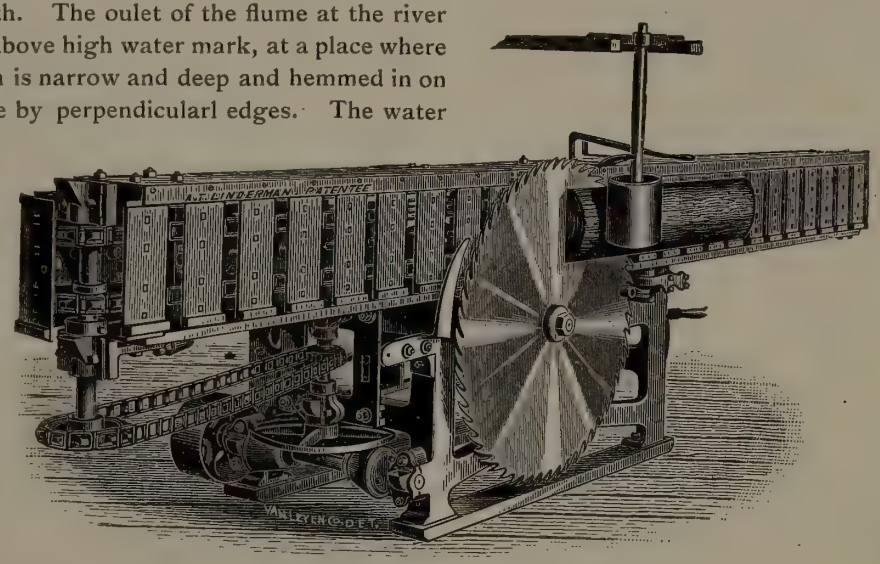
The accompanying illustration shows a circular re-sawing machine as manufactured under the Linderman patents by the Waterous Engine Works Company, of Brantford, Ont., and which is adapted for re-sawing slabs as well as lumber. The manufacturers claim that it will convert slabs and other mill refuse into lumber at a small cost. The lumber from slabs is usually of upper grades, and much being clear, the amount that can be taken from a cord of ordinary slabs is from 400 to 700 feet surface measure, according to the thickness.

The Northwestern Lumberman, in describing the plant of the Northwestern Lumber Co. at Eau Clair, Wis., where three complete sets of this machinery are used, says :

"When a man can cause two blades of grass to grow where but one grew before, he is a benefactor of mankind —but what shall be said of the man who causes A selects to exist where before there was nothing but cordwood?

If we could gather together the values which have been thrown away in the white pine business since logs began to be cut into lumber, we could pay the national debt, a couple of river and harbor bills, square up the deficiency, and leave a surplus that would make money a bigger drug in the market than No. 2 boards are now. For years and years nobody paid the slightest degree of attention to saving or minimizing waste in making lumber. Now the great problem with the lumber manufacturer is first, how little waste can be made, and second, how it can best be disposed of. Lath and shingles, it is true, take care of much waste, but that they do not use it up to the best advantage is clearly shown by the always overstocked condition of those two commodities. The Linderman system provides a most profitable method of rescuing from the burner and the firewood pile much lumber that is valuable.

It is well-known among mill men that but little is left for the burner where lath are made, and that nearly or quite 10 per cent. of the timber goes into the slab pile. How to get it out at a profit has been the problem heretofore. This machine seems to furnish the solution—uses a thin 52-inch saw—arranged so that it is readily set for different thicknesses from 7/16 to 2 inches, to take all there is out of the slab. The change of thickness is made instantly. It saws any length. In a single band or circular mill the usual daily saving is from 7,000 to 9,000 feet of ⅝ box lumber, at a cost not to exceed for re-sawing, edging, trimming, of $1.00 per 1000. Weight, 3,800 lbs. ; pulley 16 × 12 ; speed, 700. The pressure roll, in place of hanging as shown in cut, is now attached to frame, and is driven."



Circular Re-Sawing Machine.

---

To do the most work in the least time, without slighting quality nor wasting stock, is the problem. It is a condition, not a theory.

In twelve tests of green Georgia pine timber taken from all parts of the tree, an average modulus of rupture of 9,313 pounds per square inch was found. Seven tests of seasoned timber gave an average modulus of rupture of 10,524 pounds per square inch, showing that the seasoning adds about 13 per cent. to the strength of the green timber. The stronger timber was found in the butts of the trees, and the heart is, of course, stronger than the sap wood.

One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## SANITARY CONDITION OF LUMBER CAMPS.

COMPLAINTS of the unsanitary condition of lumber camps, and the prevalence of typhoid fever and other infectious diseases among men employed in the woods, have lately been received by the Provincial Board of Health at Toronto. The town of Sault Ste. Marie reported that a number of typhoid fever patients had been brought in from the neighboring lumber camps, and that the municipal authorities were obliged to look after them, and the authorities requested that the expenses thus incurred be paid by the Provincial Health Department. An investigation proved that there was sufficient ground for some of these reports, while others were more or less exaggerated. At the suggestion of Messrs. Gilmour & Co., of Trenton, an inspection of their camps in Algonquin park was made by Dr. Robertson, whose report, a synopsis of which was given in our January number, showed that, on the whole, the camps and surroundings were kept in good condition and very little sickness prevailed. Lack of proper ventilation in a few instances was reported.

With a view of ascertaining the precautions taken to prevent the spread of contagious diseases from the camps, the secretary of the Board of Health caused circular letters to be sent to a number of lumber firms throughout the province. From the replies to these letters it is learned that the men are generally in a healthy condition. To the question "What provisions exist or what arrangements are made for the sanitary supervision of the camps and for the medical attendance of the sick or injured?" some of the answers were as follows: "Keep a medicine box in each camp, and keep camps clean." "Doctor visits mills once a week, or oftener, if required, and have telegraph communication to get doctor at short notice." "Doctor within few miles of camp, and hospital at Sudbury; shanties well ventilated and have good water." "Camps kept clean and wholesome; insist on men taking out hospital tickets; health excellent." "Camps well drained and ventilated, and very little sickness; careful about getting good water." "Doctor engaged to visit camps three times a week." "Keep small stock medicine in camp and at mills, and doctor easily obtainable; never had any trouble with infectious diseases." "Always have medicine on hand." "Nearly all men have tickets for hospital; camps cleaned regularly and white-washed once a year." "Men have to change clothes once a week; sick or injured are taken home, and some have hospital tickets." "Proper w. c., and camps inspected by village sanitary officer; get medicine regularly." "Fumigate camps with limestone; foreman instructed to blow sulphur in men's throats when sore." "Doctor resides adjacent; proper ventilation and systematic cleaning." "Insist on having our camps kept clean; men have season tickets for hospital; good health and no contagious diseases."

It was shown that at some camps a special building wes set apart for use as a hospital, but this was considered unnecessary in most cases owing to close proximity to the general hospitals. The reports show, however, that the amount of air space allotted to each man is below that which is regarded as necessary by the Provincial Board of Health, and it is intended to seek amendments to the present Health Act with a view to improving the general sanitary condition of lumber camps. It is proposed to allow each man 500 cubic feet of air space in the camps, and to have the water supply inspected by a physician. Infected persons are to be placed in isolated houses built for the purpose, and the local health officer is to procure a physician and a nurse at the expense of the lumber company.

Lumbermen, in common with the general public, are interested in the health of the community in which their camps are located, and realize the benefits to be derived from proper sanitary arrangements. With respect to providing ample air space we believe that no opposition will be offered, but where hospitals exist at present it should not be necessary to provide a separate isolated building and to procure a special physician and nurse at the expense of the company.

## NEARING THE CRISIS.

As the date of the meeting of the United States congress approaches, a portion of the lumber manufacturers of the United States are vigorously pushing forward their claims for the re-imposition of a duty on foreign lumber. And as the matter becomes more widely discussed, more apparent are the conflicting interests. The proposed duty of $2 per thousand feet on white pine is meeting with strong opposition by the Eastern Michigan lumbermen who have large timber holdings on the Georgian Bay, and by others who are obliged to look to Canada for the supply of logs to keep their mills running. A committee representing these gentlemen appeared at Washington recently to oppose the duty.

The statement was made recently that the Ways and Means Committee of the House of Representatives had completed the lumber schedule, and adopted the McKinley rates except in respect to white pine, which was raised to $2. This report, however, is not generally believed.

On another page is printed an abstract of a pamphlet letter from Mr. Hill, of Saginaw, in which are advanced very weighty arguments against any interference with present tariff arrangements. Certainly if the duty is imposed, the consumers in the Eastern States will be obliged to pay a higher price for their lumber, whether they use the Canadian product or that of the white pine forests of Minnesota. The argument so often used that the cost of stumpage in Canada is much below that in the United States, Mr. Hill points out, is incorrect. While it may have been the case ten years ago, it is not so to-day. Furthermore, the cheap lumber which has been placed upon the United States markets has been largely of home production, as will be shown by a visit to the Canadian mills, where large quantities of lumber will be found which has been held for higher prices.

To our mind there is no probability of the United States government imposing a $2 duty upon white pine. The point of decision seems to be between any change from present conditions and the adoption of the McKinley tariff. The members of the New York Lumber Trade Association and the Buffalo dealers have already placed themselves on record as opposed to anything higher than $1 on rough lumber and $2 on dressed, while in the face of the present agitation for a duty we find American lumbermen, such as William H. Parsons & Co., of New York, and General Alger, of Detroit, who has a large saw mill at Alpena, investing heavily in Canadian timber limits. These purchases would seem to indicate that they have little fear of the enactment of such legislation as would be certain to result in retaliatory measures being adopted by the Dominion goverment which in turn would prevent the free exportation of Canadian logs and pulp wood. The lumbermen of the Southern States who look for increased trade with the north as the result of the shutting out of Canadian lumber, object to a duty being imposed on lumber while logs are admitted free. Singularly enough, they ask that both logs and lumber be taxed.

A special session of congress will probably be held before the 15th of March, and it is said that the tariff bill will be one of the first matters considered. We may expect, therefore, to know at an early date just where we stand.

## EDITORIAL NOTES.

A LETTER has been received by the Department of Trade and Commerce, Ottawa, from Mr. J. S. Larke, Canadian Commissioner in Australia, in which he points out that the lumber trade of the Pacific coast has suffered great injury from improper classification. He believes that unless some steps are taken to improve existing conditions, the trade will eventually divert to some other country. Advice of this character should receive the most careful consideration by our lumbermen, coming as it does from one who has had the opportunity of studying the requirements of the market. Mr. Larke suggests that permanent and well qualified officers be appointed in Australia to deal with all lumber imports, their salaries to be paid by a small tax imposed for the purpose.

A MATTER in which the general public, and lumbermen in particular, are interested, is in securing the liberal publication of all government advertisements offering crown timber lands for sale. It must be admitted that where the probable purchasers are so widely distributed as is the case with those of timber lands, better prices would be obtained by inviting as much competition as possible by judiciously advertising all proposed sales. This, we have reason to believe, is not always done, in conformity with the law. A government sale of limits was recently held, the first notice of which we observed being in a newspaper published on the day following the sale. The effect of this was shown in the results obtained, the prices being much below the average. It is certainly a short-sighted policy on the part of government officials to economize in the direction referred to.

THE question of the most suitable street pavement is just now receiving more than passing attention, in view of the agitation for better road construction. Brick and asphalt seem to be most favored in the larger cities of the Dominion, but in smaller cities where the cost prohibits the use of these materials, wooden pavements will continue to be used to a large extent. For noiselessness, traction qualities and economy in cost they possess advantages over both brick and asphalt. The city of Victoria, and other cities of the Pacific coast province, are at present looking into the question of pavements, and the suggestion has been made that Australian woods be imported for the purpose, owing to their hard qualities. Before importing foreign woods into a country which possesses such a wide variety of forest trees, the municipal authorities should satisfy themselves that a suitable wood cannot be obtained in Canada. From the reputation attained by Douglas fir we would suppose it would be well adapted for paving purposes, but have not yet learned that any tests have been made in Canada. The city of Cincinnati is said to have adopted Puget Sound fir blocks for one of its principal streets. The published statement that Paris and London are adopting wood for paving purposes is a strong argument in its favor, as it must be supposed that before arriving at this decision a thorough investigation into the merits of the different classes of pavements was made.

Lumber is lumber in South Africa. Puget Sound fir sells in that country for from $180 to $280 per 1000 feet, according to condition and grade.

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## AN OPPORTUNITY FOR THE EXTENSION OF TRADE.

THE CANADA LUMBERMAN received a letter last January from a firm of importers of Canadian goods in South Africa, requesting our assistance in placing an order for pine, doors, windows, etc. The letter stated that as they were compelled to compete with American and Baltic dealers, it would be necessary to have the order filled at the cheapest possible point, and requested that the goods be sent at as early a date as possible, as, if practicable, they proposed getting larger quantities for a sailing vessel from New York in March. Below will be found a copy of the specifications furnished and the portion of the letter referring to the shipment of the stock :

500 planed pine boards 12 to 16 ft. long, 12 to 20 inches wide (as many 16 ft. and 16 to 20 inches wide as possible), to stand 7/8-in. thickness precisely when dressed, at about $25 per 1,000 sup. feet, f.o.b. steamer at New York.

Clear pine boards, rough, without knots of any kind : 50 1 in.; 50 1¼ in.; 50 1½ in.; 50 2 in.; 50 3 in.; as many 16 ft. long and 16 to 20 inches wide as possible ; at about $45 per 1,000 sup. feet, f.o.b. steamer at New York.

| | | | | | |
|---|---|---|---|---|---|
| 50 | doors, | 2/6 x 6/6 x 1¼ ; | 20 | sash | doors |
| 100 | " | 2/6 x 6/6 x 1½ ; | 20 | " | " |
| 50 | " | 2/8 x 6/8 x 1¼ ; | 20 | " | " |
| 100 | " | 2/8 x 6/8 x 1½ ; | 20 | " | " |
| 200 | " | 2/8 x 6/8 x 1¾ ; | 20 | " | " |
| 50 | " | 2/10x6/10x 1½ ; | 20 | " | " |
| 100 | " | 2/10x6/10x 1¾ ; | 20 | " | " |
| 50 | " | 3 x 7 x 1¾ ; | | | |

One-half plain and one-half colored marginal lights, as shown, and anything fancy in stock may be added.

WINDOWS.—Sliding sashes must be sent with frames, weights and cord complete ; boxed frames.

| | | | |
|---|---|---|---|
| 8 x 10—12 lights, | | 10 | 100 windows. |
| 10 x 12—12 | " | 10 | |
| 10 x 14—12 | " | 10 | |
| 12 x 16—12 | " | 10 | |

| 36 x 18— 4 | " | 20 | |

5 pairs Venetian blinds for each size of window ; 5 sets inside blinds for each size of window mentioned.

Canadian railroad companies are now granting us through bill of lading from Canada to Cape Town, South Africa, via direct steamer from New York, so that any railroad agent can write to New York and secure space in steamer before goods go on. There are now two sailings monthly from New York for this port—some months more. The goods had better be wired together for export. The railway agent at New York will insure the goods. Both land and water freight is to be paid by shipper in the first place, and all charges are to be added to invoice, for amount of which sight draft (with bill of lading attached) on us is to come through the African Banking Corporation, 74 Wall street, New York. An invoice of cost of the goods at the mill must be mailed to us also as soon as they leave the mill. The steamer's bill of lading will not be given out until the goods are on board, but if no time is lost in attaching it to the draft and getting the documents in the bank, it will generally reach here via England before the goods arrive, coming direct. By pre-paying the freight at your end 5 per cent. is saved to us. We would like catalogues, cuts, sketches and prices f.o.b New York, and we trust this will result in the opening of a profitable business in a direct way with South Africa, as we intend having several sailing vessels at New York during 1897.

The only question is as to whether you can compete with American prices at New York, and we think you do somewhat better.

The letter and specifications were submitted to several manufacturers who it was thought would be most likely to handle the trade. Some of these went into the matter fully, and satisfied themselves as to the financial standing of the firm from whom the order was received, but expressed a doubt that a satisfactory profit could be made in competition with United States prices, and declined to fill the order. In the case of the doors it was claimed that what is known as a No. 3 door was desired, for which a very low price would be obtained. Should any of our subscribers desire to communicate with the firm mentioned, we will be pleased to furnish their name and address upon application.

## A DEFINITE POLICY REQUIRED.

MILTON, N. S., Jan. 30th, 1897.

To the Editor of the CANADA LUMBERMAN :

DEAR SIR,—Regarding the effect of the proposed import duty on Canadian lumber, we may say that, while there may be quite a diversity of opinion with regard to the utility of an import tax, we have noticed this, in our experience, that under a law upon which all could figure, the business of the United States—in the lumber trade, at least—has gone steadily on ; and upon the whole, we are inclined to think that better returns were obtained than under the uncertain policy of the Democratic party. The experience of the last few years, we think, bears us out in this conclusion. Occasionally the prices have been good, but following right upon this would be a ruinous drop in prices occasioned by the uncertainty of the trade policy ; and while we do not wish to be understood as advocating a protective tariff, yet under a form of policy from which the uncertain element is eliminated in the largest degree, the business of any country will develop the greatest degree of activity.

Now, during the past few years, in the matter of remittance of duties there has been a gain, but it has been more than overbalanced by the reduced price of stock occasioned by the general business stagnation. If we could have the assurance of good business prosperity with the duties removed, we should say that it would be the better form ; but it does not seem to work that way.

Yours truly,

HARLOW & KEMPTON.

The Fall Mountain Paper Company, of which the Hon. William A. Russell is the head and front, has given considerable study to the practical methods for preserving their spruce forests, or rather of utilizing them in such a way as to secure a continuous growth and product. During the past year their agents gathered many bushels of spruce cones, which they will plant the coming season on the deforested portions of their real estate on the Upper White River valley in Vermont.

If oil comes in contact with gum belts it softens them. If water gets between the canvas and the seams, and then freezes, it separates the layers. Even frosty pulleys, in contact with gum belts, tear them from the canvas. Boiled linseed oil, lightly applied on the pulley side of a gum belt, will help to overcome slipping, caused by dust, etc. Gum belts are now used with success in damp or wet places in preference to leather ones, because the leather absorbs dampness, etc. Gum belts canot be used with success at half cross or on cone pulleys.

A German scientist has been engaged in preparing a table of ages of certain European trees. He finds that in Finland and Sweden the pine and fir trees attain to the maximum age of 700 years. The greatest ascertained age of the larch—this is Bavaria—was 274 years, while the silver fir of the same locality often grows until after it is 400 years old. The oldest known German specimen of the oak is one of the "holm" variety which formerly stood near Aschaffenburg, which the ring growths proved to be 410 years of age. The maximum ages of other German trees, as formed by counting the ring growths, is as follows : Red beech, 245 ; ash, 170 ; elm, 130 ; birch, 200 ; aspen, 210, and alder, 145.

# THE RETAILER AND Wood-Worker

## WESTERN RETAIL LUMBERMEN'S ASSOCIATION.

THE Western Retail Lumbermen's Association assembled in annual convention in Winnipeg on Tuesday, February 9th. The attendance was good, and included a number of manufacturers who are honorary members of the association, among whom were:—D. C. Cameron, of Rat Portage, R. Mather, of Keewatin, Mr. Graham, of Fort William, D. Ross, of Whitemouth, and J. G. Scott, of the Pacific Coast Lumber Co., New Westminster.

The president, Mr. D. N. McMillan, of Morden, read an interesting address, going into the workings of the association during the past year quite fully. His remarks in part were as follows:

Gentlemen:—It affords me much pleasure to welcome you to our sixth annual meeting. I am pleased to congratulate you upon the successful workings of the association during the year now passed, and upon the benefits conferred upon the members in maintaining prices, especially this last year on account of the general depression and scarcity of money; the demand for lumber and building material being considerably less than other years. Also the determination of honorary and active members to give shorter and less credit has no doubt curtailed the trade to a great extent, but this action in giving less credit has no doubt reduced the amount of slow, doubtful and bad accounts, which will in the end have the effect of placing the trade on a firmer and more substantial basis, thereby increasing the credit of the retailer and securing to the wholesaler customers in whom they can have perfect confidence.

When your present officers were elected last year we found serious trouble had existed for some time previous in Gretna, Brandon and other points. Members were competing with each other on an open list and were selling at ruination prices, which, if continued, would no doubt have ended in great loss, and our honorary members would have been joint sufferers with the retail dealers. I am pleased to say our secretary visited these points and succeeded in having these members agree to a price list, and where serious trouble existed harmony has since prevailed to the advantage of all concerned.

I should consider myself remiss in my duties as your president if I did not tender the thanks of myself and those of my directors to our honorary members for the loyal manner in which they have lived up to the rules and regulations of our association by not selling to customers in competition with retailers, not one instance to the contra having come before us. I would most strongly urge upon our active members the necessity of following their good example by purchasing only from honorary members. In the past honorary members have had reason to complain, which, if continued, may seriously jeopardize the success of our association.

It is true that at some points certain low grades of American lumber are delivered cheaper than the same grades from honorary members, and a few members, apparently, cannot resist the temptation and occasionally buy from non-members. I would suggest that the president and directors you will be pleased to elect to-night, arrange a meeting with the honorary members interested, and, if possible, have a mutual understanding that the prices on a few of these grades mentioned be reduced, even if some other grades were slightly increased, thereby removing the temptation which may endanger the friendship existing between honorary and active members at the present time.

I am pleased to congratulate the association on the satisfactory state of its finances, which shows a substantial reduction in expenses over previous years, and a handsome balance carried forward, notwithstanding the reduction in our members' dues from ten to five dollars per year.

MR. T. A. CUDDY,
President Western Retail Lumbermen's Association.

At our last annual meeting our membership stood at 141; during this year 24 new members were accepted by your directors and secretary. Five have withdrawn for various reasons, leaving our membership at the present time 160, an increase of 19 over last year. This increase shows the benefit of belonging to our association, and is appreciated by the trade.

During the year numerous other applications for membership have been received from all parts of the country and considered by your secretary and executive committee, and declined on the grounds that there was not business enough at these points to support another yard, and it would be contrary to our rules and unjust to the present members to allow competitors to their detriment. This again proves the value of the association to our members. In rejecting and accepting applications we also considered the purchasing public and carefully guarded their interest.

In the early part of the season your executive committee undertook to get a short summary of the Lien Law, thinking it would be of advantage to have it printed and mailed to each member of the association. Solicitors were consulted who wrote the secretary a long letter saying they were afraid that it would be impossible to give anything like a valuable summary of the Mechanic's Lien Law. Books of many pages have been written upon it and mere citation from the statutes would not be sufficient. They, however, gave several points to be borne in mind, but these were not considered sufficient to have printed and distributed. It might be well at this meeting to consider the advisability of waiting upon the local government and urging the necessity of a new lien act being passed at the coming session.

Before closing I feel the thanks of the association are due to the directors for the way in which they have performed their duties, and more especially to our secretary, who has, under trying circumstances, managed to adjust all differences and arranged many matters tending to cause friction between members, and also in other ways greatly increased the advantages of our members.

Thanking you for your attendance and for the attention with which you have received my address, and trusting that your deliberations will tend to increase and cement the friendly relations which have hitherto existed among our members, and which have so materially benefitted our association.

After the presentation of the usual reports, it was announced that the manufacturers had decided to make a very important reduction in the price of lumber. In substance, they offered to make the wholesale price of lumber, delivered at Winnipeg, apply to country points, with the addition merely of the balance of the through freight rate over and above the rate to Winnipeg. The rate from the Lake of the Woods mills to Winnipeg is 10 cents per 100 lbs. Lumber shipped to points having a higher rate would be charged the amount of the additional rate over 10 cents, and the lumber would be billed at Winnipeg prices. This will make a very important reduction in the price of rough lumber, dimension, etc., delivered at country points. On No. 1 dimension the reduction will be about $1.60 per 1,000 feet, on No. 2 it will be $1.40, on 3rd common boards about $1.50, cull boards about $1.00, 2nd common boards $1.50, shiplap $1.60, 6 inch shiplap $1.50, 3rd flooring 65c., etc. On finished stuff the prices will not be materially changed. These reductions, it is thought, will keep out the inferior grades of Minnesota lumber which have been brought in to a limited extent at some points.

The election of officers resulted as follows: President, T. A. Cuddy, of Minnedosa; Vice-President, J. B. Mather, of Glenboro'. Directors, J. M. Neilson, Carberry; G. N. Miller, Virden; D. Stewart, Rosenfelt; C. W. Plummer, Boissevain; D. E. Sprague, Winnipeg; John Arbuthnot, Winnipeg. Duncan Sinclair and J. M. Hall were re-elected as auditors.

At a subsequent meeting of the Board of Directors, Mr. John Dick, of Winnipeg, was re-elected Secretary-Treasurer.

Mr. T. A. Cuddy, who has been chosen as the chief executive officer of the association, has for many years carried on a retail lumber business at Minnedosa. After serving a term on the Board of Directors, he was elected vice-president at the annual meeting in February of last year. Having always evinced a deep interest in the prosperity of the association, it goes without saying that its interests will be properly looked after under his supervision, and we predict a year of steady advancement for the lumbermen of the Northwest.

---

Barrel manufacturers complain that hoops of hard or rock elm timber are undesirable at any price, as staples and nails are not easily driven into them, and they also split easily.

## HOUSING LUMBER.

There is a growing sentiment in favor of storing lumber under cover, especially if it be above the grade of common, or is of high-priced varieties. Of course transactions in lumber at wholesale are too large as yet to admit of a general application of the principle to all kinds. This is especially true of the white pine trade, where single concerns handle 50,000,000 feet and upwards during a single season. To house all such a stock, or even all the best grades in it, has hardly been thought feasible as yet. Granted, what is the fact, that no one handling so large an amount in a year even had one-half of it in stock at one time, it is still not quite certain that this amount, even, could be covered with economy under present conditions of the trade.

But it is a fact that vastly more stock could be housed than is now the custom, if lumbermen only thought so.

A large amount of white pine could be stored under cover to the benefit of the lumber to such an extent as to more than offset the cost. The same is true of yellow pine, and this fact is gradually being recognized, especially by dealers, the manufacturer not yet paying much attention to the subject.

Dealers and handlers of the hardwoods are taking by far the most active interest in the question, and a large number of both wholesale and retail dealers are now storing a good proportion of their stock under cover. Many of them put all their best grades and all rather scarce, high-priced stock under a shed as soon as received, even though it may be green. Others pile their green stock in the open air for from three months to a year, and then transfer it to the shed. All the hardwoods, if not all woods, deteriorate when piled in the open air, subject to alternate drying and wetting and the direct rays of a hot summer sun, and to the effects of freezing and thawing when soaked with rain or melting snow.

Many of the hardwoods are very susceptible to the influence of the elements, and begin to decay very quickly when left exposed to them. Others warp, check and twist, while if put under cover immediately from the saw, they dry out flat and straight, and with only slight checking. Many kinds of lumber become discolored and spotted or lose their natural color by long exposure to the elements in the open air, and only retain their real beauty when seasoned under cover.

Choice hardwoods, worth $40 or more a thousand feet, such as quartered oak, cherry, curly birch, curly and bird's-eye maple, and walnut, will always pay for careful housing, and this fact is well understood by many wholesale consumers who carry a greater or less amount of stock until it is from one to four years old. Many retail dealers are recognizing the fact that money put into a well constructed shed large enough to hold all but their dimension and coarsest inch, is money well invested and that will pay a good interest.

The man who would leave his well-filled pocket-book out of doors on top of a pile of lumber, would be looked upon as a candidate for the insane asylum; but that is just exactly what he does when he leaves his piles of fine, wide quartered white oak or similar valuable lumber uncovered and exposed to all the inclemencies of the weather.—Hardwood.

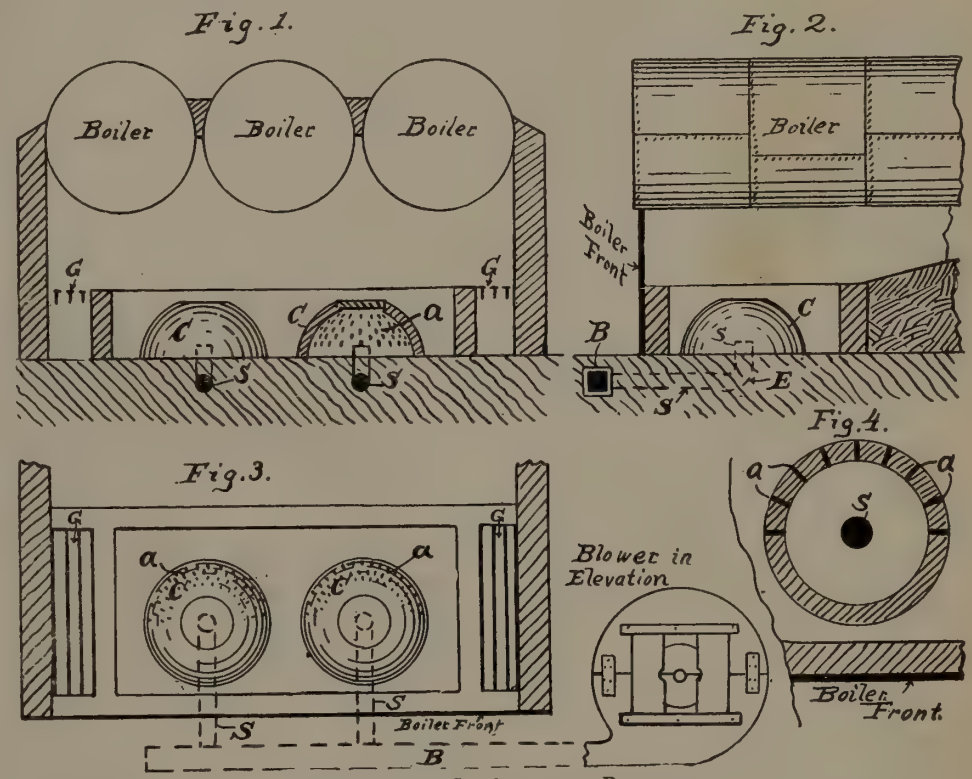
## FURNACE FOR SAWDUST AND REFUSE.

I see in the December number a request for plan of furnace for sawdust and refuse to keep plenty of steam. I have tried a great many plans—a deep and narrow fire box for wood; shallow and wide for sawdust; but a brick cone with a blast without any grates whatever, beats anything I ever saw. I have run one for two years with success.

I build them like this: Throw away all grates. For three boilers use two cones; four boilers, three cones. The cones must come between the boilers so sawdust will drop back of center of cone. The top of cone must come about three inches below where top of grate originally was. If you get them too high when throwing in wood, you will hit them. I deepen the ash box just enough to get them the right height. The cones are made round like the old-fashioned straw bee-hive, and drawn in enough to leave a hole in the top 18 to 24 inches, to be covered tightly with an old logging car wheel, or old grates broken off the right length. Common clay will do to lay up cones, by using lots of salt. The cones must be started on the bottom large enough to leave sufficient space between them sideways and front. The bridge wall behind must not be over 16 inches from cone. If your side wall comes farther than 16 inches, build up a wall and put on several other grates. Where you can drop sawdust on side, or use wood, fire brick must be used all around.

Now about building the fan (any millwright can build one): Take 2 x 6 and match same as flooring to make the fan box. No. 14 sheet iron is just the thing to go around the outside circular; hard wood 2 x 4 for fan; arms notched and boxed together, two 10 inch flanges for fans to hold same. Fan blades to be made out of band saws or out of No. 14 sheet iron, size 8 x 10, with two belts. Fan when completed, three feet diameter, two inch shaft, and ought to run 1,200 per minute, with slides to close, or give more air if needed. Then build a wooden box out of 2 x 10 and 2 x 12, leaving a 10-inch hole from fan along in front of arch, say from two to four feet, and from the box to cone run a six-inch stove pipe with elbow to turn up into cone. You can put a damper in your stove pipe if you want, but it is not needed for three boilers. This box and pipe are buried under ground from four to six inches, and covered with brick and clay.

Now for the cones: Build them in a circular with fire bricks and tip them in a little and draw in every course. The back half of your cone must have air-holes. Use your brick in the circular endways. First tier of brick leave hole 1½ inches in opening at each end of brick, second tier 1¼ inch opening, third tier one inch opening, fourth tier ¾ inch opening. Now this is only the back half of the circular to be opened. The front half must be made tight or otherwise the blast would blow out at the doors and you could not get near them. The draft doors must be bricked up. Put in a thimble with sheet iron; cover to give draft when firing up in the morning. It takes a little longer to fire up than if you had grates, but when ready to go, and you get a little used to it, it beats anything ever put in a saw mill. It will cost less than a new set of grates, or any other device. It can all be made at your mill except shaft and boxing. This is no experiment, but is running in a great many mills. I should have stated that bottom of fire box must be bricked over with common brick, ashes cleaned out once a week; clean out holes with small iron hook at the same time. The space between cones, and cones and bridge wall, can be made larger, but it will take more fuel, and the smaller the cones the better they will stand. The cones must be set close to front of arch and a wall eight inches thick must protect fire front. In this way you get the fire well to front end of boiler. The space between cones must be regulated by size of boilers; 36 inches outside diameter is large enough for cones. —A. J. Acker, in Wood-Worker.



Furnace for Sawdust and Refuse.

A Rochester man has built a tiny engine, three-fourths of an inch long, weighs 31 grains, runs perfectly and goes in a thimble.

# WOOD PULP DEPARTMENT

## AMERICAN CAPITALISTS INVESTING IN CANADA.

A TRANSACTION of considerable magnitude has been reported from Scotstown, Canada. Wm. H. Parsons & Co., of New York city, representing the Pejepscot Mills, Maine, on the Androscoggin river, has recently made a $50,000 purchase at Scotstown, of the Cookshire Mills Company, of their lumber mills and timber limits in that location.

Messrs. Parsons & Company have been in the habit of purchasing a very considerable part of their spruce pulp wood supply in that section of the country. Some months ago they bonded this property of the Hon. R. Pope, representing the Cookshire Mill Company, and before the bond expired they decided to purchase the property. It does not carry with it the ownership of any timber lands, but represents certain timber limits belonging to the Canadian government, and leased by them, so that whoever cuts pulp wood therefrom pays a certain stumpage for the cuttings. This price is not a fixed rate, as the government of Canada arrogates to itself the right to increase this at its own pleasure.

The cost of freighting spruce pulp wood from Scotstown to the Lower Androscoggin, where Messrs. Parsons & Co. propose to grind up this wood, is about $3 per cord. It seems odd that a pulp and paper concern situated on the Androscoggin river, in the State of Maine, where so much spruce is supposed to be growing, should be forced to make a purchase of forest areas or leases of forest areas in the Dominion of Canada, in order to secure a supply of raw material. This is especially interesting, considering the fact that it is almost certain that the Canadian government will impose an export duty on spruce pulp wood of $2 per cord, making with the freight of $3 per cord—a $5 cost, independent of the cost of stumpage, cutting, hauling and loading on the cars.

This is pretty certain evidence that some of the large pulp and paper manufacturers are willing to have their pulp wood cost more than it does at present, and also leans towards the idea that the areas of spruce forest accessible and desirable for the Maine pulp mills are somewhat scarce or difficult to obtain.

No doubt a purchase in Canada seems cheap in comparison with a purchase of similar rights in the United States, but in the end I believe the areas in the United States can be operated much cheaper than those in Canada. Besides, the accessibility and desirability of those in New England places them far ahead of similar tracts in Canada.

It will be remembered that last year the Montague Paper Company, of Holyoke, Mass., made a considerable purchase of Frank Dudley in this same section of the eastern townships, province of Quebec.

It is also learned that there are large contracts being made this year in the eastern townships for delivery of spruce pulp wood over the Grand Trunk railroad, and over the Boston and Maine system, for New England pulp and paper mills. It is rumored that the Burgess Sulphite Pulp Company, of Berlin Falls, N. H., are making considerable purchases of pulp wood in Canada this year; also that several of the Maine concerns are contracting for future deliveries of wood, and some of the Connecticut river pulp and paper mills are expecting a part of their supply from the eastern townships.—Northeastern Lumberman.

## THE BRITISH MARKET FOR WOOD PULP.

THE last issue of Wood Pulp, published in London, England, contains the following with regard to the market for wood pulp:

The market is very quiet at present, as the bulk of the papermakers have now contracted for their next year's supplies. In the case of mechanical, although there has been no advance, there has been no decline in prices, nor any indication of such in the future—the tendency, in fact, being upward. We hear on reliable authority that the prices for Scandinavian deals have risen nearly 50 per cent., so there seems no likelihood of a fall. Makers of mechanical pulp are holding out for higher prices, but we have not heard of any orders being booked at what they now ask, nor does there seem to be any prospect of their getting what they want at the present time. As most of next year's contracts have been made, papermakers can afford to wait, and the efforts Canada is making to obtain a hold of the market here justifies to a certain extent their decision to wait. There is little doubt that in the near future Canada will prove a very important factor in this market. Already she is offering to supply mills with regular consignments at short intervals at almost the same price as the Scandinavian article; and Canadian pulp has the reputation, whether justly or not, of being superior to Scandinavian. The same thing, however, does not apply to the case of chemical pulps, as America does not yet seem to be able to compete in either quality or price with the European article. The market is accordingly firm at recent prices, while makers are now holding out for higher figures. There is not much of either soda or sulphite to be had now, however, and what little there is is being reserved in the hope of getting higher prices later on.

## NEW LIQUID FOR MAKING PAPER PULP OF WOOD.

VERY considerable advantages are presented, the Milwaukee Journal thinks, in the new liquid brought forward by James Lappen, of Appleton, Wis., for making paper pulp of wood. Instead of such pulp product being limited to spruce, this mixture transforms pine—especially slabs and endings—spruce, basswood, poplar, hemlock and tamarack, into such pulp; and whereas the liquor now used in paper mills eats the tanks and machinery and gives off violent fumes of sulphur, the new liquid does not corrode and has no disagreeable odor. The inventor further asserts that the new liquor is much less expensive than that now in use; in fact, reducing the cost of pulp some 50 to 75 per cent., and this with a good profit still remaining for the manufacturer; and one of the valuable points, in addition, put forth in its behalf is that the liquor cooks the wood to pulp in the digester in some six hours or less, while by the paper pulp process at present in vogue a piece of spruce to be cooked requires a much longer time. The quality of paper thus produced is pronounced to be remarkably good, being firm and pliant, of satisfactory color, and, on account of its texture and leathery consistence, has been examined by experts in leather manufactures with a view to its employment as material for inner soles, heels and shanks.

## PULP NOTES.

A pulp mill is being erected at Chicoutimi, Que. J. D. Guay, of Quebec, is one of the promoters.

It is reported that the establishment of a pulp mill at Magaguadavic Falls, N. B., is contemplated.

Pulp and paper mills are proposed to be established on the Petawawa river, in the vicinity of Pembroke, Ont.

It is said that an impetus will be given to the pulp trade by the recent discovery that bottles can be made out of pulpwood which are said to be not only unbreakable but lighter than glass bottles.

Mr. D. Jalber, of Lake Bouchette, Que., states that a company is being formed in Quebec to construct a pulp factory on some falls of the Ouatchouan river, a few miles below its issuing from the lake, where between 3,250 and 3,500 horse power can be obtained.

Mr. J. S. Larke, Canadian Commissioner in Australia, states that Canadian paper and pulp manufacturers are making no effort to enter the Australian market. Canadian paper is continually being asked for, and unlike most other articles from the Dominion, the sale would be an immediate one.

The first carload of manilla paper ever sent out of Nova Scotia arrived in St. John last month. It was from the paper mill at Hartville, near Windsor, N. S. Both the pulp and the paper are made there. T. G. McMullen has a band mill on the same stream, quite close to the paper mill, and the refuse from the former is utilized for making some of the pulp. The mills are run by water power, and there is a strong head at both mills. The paper mill could get a 40 foot head if necessary. Above the mills is a lake 21 miles long, surrounded by excellent spruce for pulp. The paper mill has its own electric plant, and is fully equipped for economical work.

An act has been passed by the Nova Scotia legislature incorporating "The Acadia Pulp and Paper Mills Company, the promoters being Hon. Alfred G. Jones, Alfred E. Jones and Walter G. Jones, merchants; John F. Stairs, manufacturer; Thomas Fysche, bank manager; Benjamin F. Pearson, barrister, all of Halifax; George E. Pomeroy, of Toledo, Ohio, banker; George A. Clarke, of Boston, pulp merchant, and a banker of London. The capital stock of the company is $550,000, and power is given to increase the same as the wants of the company require, to $5,000,000. The business of the company is, in effect, to take over all the pulp mill industries in Nova Scotia.

An application of the Sturgeon Falls Pulp Company to exercise certain powers under the water privilege act came up for hearing at Sturgeon Falls, Ont., on February 9th. A proposition to purchase the Russell power by the Pulp Company at a price of $6,000, reserving to Russell a small water power and some land on the east bank of the river, was taken into consideration by the counsel for the claimant, the Judge adjourning the sitting to enable the parties to reach an agreement. The matter is therefore virtually settled, and the settlement gives the pulp company from eight to twelve thousand horse power that can be effectively used. The pulp mill there is being built as rapidly as possible, and the foundation work and rock blasting is rapidly reaching a conclusion.

Mr. J. H. Lefebvre, of Montreal, has written a letter to the Montreal Gazette advocating the imposition of an export duty on pulp wood. He says: "If you visit the pulp and paper mills of New England and New York you will see there large numbers of Canadian workmen, working on Canadian woods, for the profits of American manufacturers. Why should we thus send abroad our workmen and the raw materials which we could so profitably utilize in our own country. In 1894 Great Britain imported $25,000,000 of paper and paper making materials. Could we not supply the fourth or the fifth part of this? In this case five or six millions would float into our country."

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. III. TORONTO, ONT., FEBRUARY 24, 1897 No. 8.

CANADA LUMBERMAN

PUBLISHED BY

C. H. MORTIMER

*Confederation Life Building - TORONTO.*

Branch Office:

NEW YORK LIFE INSURANCE BUILDING,

MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

**Lumbermen visiting Toronto are invited to call at the office of the CANADA LUMBERMAN. We shall have pleasure in giving them any information desired.**

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

### POSITION WANTED.

A POSITION AS MANAGER OF A BRANCH sales office, wholesale yard or saw mill Apply to Box 136, CANADA LUMBERMAN

### WANTED.

3 CARS OF 2" No. 1 AND 2 AND COMMON Soft Elm. Address, BUFFALO HARDWOOD LUMBER CO., Buffalo, N. Y.

### WANTED.

A FEW CARS OF BUTTERNUT, WIDE Black Ash, 2" Rock Elm, and some Curly Maple Write George Cormack, Whitby, giving full particulars.

### FOR SALE.

BOILER, ENGINE AND SHAFTING, 45 h.p., in good order, or will exchange for lumber and shingles. JOHN BRADLEY, 23 King Street West, Hamilton, Ont.

### WANTED.

SHINGLE CONTRACTOR TO TAKE CONtract to cut out 25 to 35 million shingles. Must be experienced. References required. ROBERT THOMSON & CO., 141 Stuart St., Hamilton, Ont.

### FOR SALE.

FOR ANYTHING YOU WANT IN DIMENsion Tamarac, also lumber and shingles, send your order to the undersigned

W. H. JACKSON, Dundalk, Ont.

### FOR SALE.

WE HAVE 2½ MILLION FEET PINE STOCK not sold. If you have not received our stock list and wish one, write us. Our mill is now running. We are open to fill orders for bill stuff. We can quote you on pine lumber, lath, shingles, cedar posts or railroad ties. KEELING & BOWER, Warren, Ont.

## CURRENT TRADE CONDITIONS.

### ONTARIO

Whether we write of pine or hardwoods, it must be said that there is very little life to the trade. The past week has been devoid of any contracts of particular significance, only such lumber as is required for immediate consumption having been purchased. The retail yards, although carrying light stocks, are not replenishing to the extent which might be expected at this season of the year, when the low price of lumber at the mills is taken into consideration. There is strong probability of an advance in the prices of some grades before the spring season is far advanced, and a more advantageous time to build up stocks is not likely to occur during the present year. It is learned that some shipments have gone forward to the United States from the Georgian Bay district, but the quantity has been very small compared with the stocks held, which are given in another column as 442,000,000 feet. The C. P. R. report a good traffic in timber and lumber along their Owen Sound branch, and cars are said to be in good demand. The stock, however, consists largely of square timber, telegraph poles, ties, and such like, of which large quantities are being taken out. In the woods the lumbermen are rushing work as speedily as possible, and hope to get in the required stock of logs. Some fear is expressed that, owing to the lack of snow, the water will not be sufficiently high in the streams to permit of floating the logs in the spring, in which case some of the mills will be seriously handicapped. Should this prove to be the case, its influence will also be felt in the market, tending towards higher prices.

### QUEBEC AND NEW BRUNSWICK.

Local dealers at Quebec city report trade very fair, with decidedly better prospects for the spring. A boom in building operations on the outside limits of the city is anticipated, on account of the construction of the electric street railway. In the outlying districts of Montreal there is also considerable building in prospect, and indications point to a degree of activity as soon as the winter season shows signs of disappearing. Quebec goods remain firm in the European markets, and shippers are obtaining better prices than last season. From the ports of the maritime provinces a fair quantity of deals is going forward to the British markets by the regular line of steamers, although there is yet a large stock waiting shipment at St. John, and it is probable the demand for tonnage will result in a rise in freight rates. There is practically nothing doing in the United States trade beyond a few light shipments of mixed lots. The weather is favorable for logging in the woods, and the work is being pushed along vigorously. The cut will be an average one, that on the Miramichi being estimated at 76,000,000 feet, and that on the Tobique at 36,000,000 feet.

### BRITISH COLUMBIA AND MANITOBA.

The volume of trade secured by British Columbia mills this season promises to be much greater than last year. At present about twenty vessels are loading at the different ports for foreign countries. The British ship Speke is loading a cargo of over 2,000,000 feet at Vancouver. It is hoped also to obtain more remunerative prices by means of a combine which has been organized to take the place of the Central Lumber Company, and which will control the foreign trade. A stir has been created in Manitoba and the Northwest by the announcement made at the annual meeting of the Western Retail Dealers' Association that the manufacturers had decided upon a reduction in the price of lumber at country points. Hereafter the delivered price at Winnipeg will apply to country points, with the difference in the through freight added. The reduction ranges from 50 cents to $1.65 on dimension, boards, shiplap, etc., while on finishings the prices will not be materially changed.

### UNITED STATES.

Lumber sales in the United States are still confined almost wholly to present requirements. Reports from the white pine centres tell the one story of a very restricted demand. Manufacturers are holding out for higher prices, and these the wholesale dealers do not feel satisfied to pay until there is a fair prospect of placing their holdings to advantage. The low price of farm products is one of the agencies which is said to be hindering the enlargement of demand, restricting, as it does, the amount of money available for making farm improvements. Taking the different markets, we find the most activity in the east, where money is much easier and the outlook for building operations rather promising. At Philadelphia the white pine market is improving, and it is believed that some good contracts will shortly be placed, the erection of over 2,000 houses being contemplated. The city work is getting in better shape, and country operations promise soon to open up. Unfavorable weather at Boston has prevented any probable development of trade. Spruce frames are selling at $14; shingles and clapboards, while not in great inquiry, are somewhat steadier. A slightly better feeling prevails at Buffalo and Tonawanda, although business is below the average at this season of the year. There is very little life to the hardwood trade, beyond some purchasing of desirable stocks for export. The furniture factories, which are known to have light supplies, have not yet commenced to replenish their stocks, although necessity will no doubt compel them to do so shortly. For railway purposes it is expected a considerable quantity of hardwoods will be required.

### FOREIGN.

Importers of Canadian goods in the British markets have placed a large portion of their early cargoes, and are now less anxious to close contracts than earlier in the season. There are some transactions for late delivery, but precaution is observed by both buyers and sellers. The east coast is comparatively bare of white pine deals, and larger quantities are due to arrive than usual. Much interest has been centred in the late public auctions, at which prices for spruce and pine deals have shown no diminution. The results of sales at Glasgow and London are given in another column. There is quite a brisk trade doing in hardwoods at most of the principal ports. At Liverpool and Hull building is active, owing to mild weather, and an improvement in the demand for deals, scantlings and boards is looked for. Some chartering of vessels is reported, but as yet very few steamers are offering.

## SHIPPING MATTERS.

The barque Minnehaha has been chartered to load deals at West Bay, N. B., for Cardiff or Newport, at 40s.

The schooner B. R. Woodside, which has been chartered to load lumber at Church Point, N. S., for Havanna, gets an advance of 25 cents over last year's rate.

Lumber freight rates from British Columbia points are as follows: Sydney, 30s.; Melbourne or Adelaide, 37s. 6d.; Port Pirie, 32s. 6d. to 33s. 9d.; Freemantle, 47s. 6d.; Geraldton, 55s.; Shanghai, 42s. 6d.; Tientsin, 50s.; Valparaiso, f. o., 30s. to 32s. 6d.; U. K. or Continent, 52s. 6d.

The following lumber charters are reported: Minnie G. Whitney, Sapelo to United Kingdom, sawn timber, 92s. 6d.; Egeria, New York to Buenos Ayres, lumber, $8, Rosario, $9; Assyria (previously) Pensacola to Cardiff, Newport, Swansea or Greenock, sawn timber, 97s. 6d.; Arizona, same; Maoma, Boston to Buenos Ayres, lumber, $8; Rosario, $9; 500-ton barque, Cape Tormentine to w.c. England or e.c. Ireland, deals, 45s.

## STOCKS AND PRICES.

CANADA.

Mr. Wilde, of Magnetawan, Ont., is taking out waney timber in the vicinity of Spence.

The steamship Adria has been chartered to take shooks, etc., from St. John, N. B., to Bermuda.

John W. Byrne, of Sussex, N. B., is cutting about 1,500,000 feet of lumber for Geo. G. Scovil, M.P.P.

Reports from England still continue cheerful. The demand is good and the prices correspondingly so.

Mr. D. C. Fraser, M.P., reports that the output of lumber in Nova Scotia this season will be fifty million feet.

The City Surveyor of Montreal has been instructed to advertise for tenders for the annual supply of lumber.

Stetson, Cutler & Co., of St. John, N. B., are reported to have placed an order with Maine manufacturers for 8,000,000 feet of deals for export.

About twenty million feet of lumber have been shipped from St. John to Great Britain since the 1st of December, while there is over fifteen million feet still available for shipment.

Two timber berths were sold at Fredericton, N. B., last week as follows: Two miles on Bartholemew river, Alex. Gibson, $130 per mile; two miles on the Northwest Nackawick, Charles E. Palmer, at upset price.

Sutherland, Innes & Co., of Chatham, Ont., have sold 1,500,000 feet of white pine lumber to D. S. Pate & Co., of Chicago. The lumber is piled at Munising, Mich., and will be shipped upon the opening of navigation.

The cut of lumber for shipment from Shediac and Baie Verte and from West Bay, N. B., this year will probably be smaller than last season, as the rotary mills have got a large portion of the timber cleaned up.

On account of the firmness of spruce deals in the English markets, this article has advanced considerably on this side, and local dealers are experiencing considerable difficulty in getting consumers to follow the advance.

Considerable quantities of spruce deals are being sent forward from the vicinity of Danville and Kingsey, Que., on the line of the G. T. R., via Portland, to the United Kingdom. These are chiefly carried by the Thomson and Elder Dempster lines of steamships.

Dobell, Beckett & Co., of Quebec, have purchased the entire cut of spruce deals and lumber of B. A. Scott's large mill at Roberval, Que. These deals will be railed to Quebec by the Lake St. John Railway, for export to the United Kingdom during the coming summer.

The assets of Messrs. Joseph Robert & Sons, Montreal, Que., are offered for sale by tender by the curator, A. W. Stevenson. The stock consists of 720,000 feet of red and white pine lumber, scantlings and laths, a quantity of hemlock, birch, maple, elm, etc., assorted mouldings, etc.

Large quantities of oak, elm, walnut and birch are daily arriving at Hadlow Cove, Que., where they are piled until the opening of navigation. Messrs. Dobell, Beckett & Co. and W. & J. Sharples are the principal consignees. Some of the wood is said to have been railed all the way from West Virginia and Ohio.

The city of Hamilton received the following tenders for the annual supply of lumber: M. Brennan & Sons, Hamilton, uncut, $12.15 per thousand feet, cut $12.50, cedar posts 6½ cents each; Reid Company, Toronto, uncut lumber, $12.29, cut $12.44, posts 7½ cents. The Board of Works has recommended that the tender of the Reid Company be accepted.

An estimate of the cut of logs on the Tobique river, in New Brunswick, this winter is as follows:

| | Feet. |
|---|---|
| Hale & Murchie | 12,000,000 |
| Jas. McNairn, for Hilyard Bros. | 8,000,000 |
| D. Fraser & Sons | 6,000,000 |
| R. A. Estey | 5,000,000 |
| Senator Baird | 2,000,000 |
| A. J Beveridge | 2,000,000 |
| Other operators | 1,000,000 |
| Total | 36,000,000 |

The estimated cut of logs this winter on the Miramichi river, New Brunswick, is in the vicinity of 76,500,000, as follows:

| | Feet. |
|---|---|
| Snowball | 20,000,000 |
| Richards | 10,000,000 |
| Ritchies | 8,000,000 |
| Hutchinson | 8,000,000 |
| Lynch | 7,000,000 |
| Vaughan | 5,000,000 |
| Sinclair | 3,500,000 |
| Welsh | 3,000,000 |
| Fairley | 3,000,000 |
| Robinson | 2,000,000 |
| Burchill | 2,000,000 |
| Other operators | 5,000,000 |
| Total | 76,500,000 |

FOREIGN.

Bliss & Van Auken have 8,000,000 feet of logs skidded near Lewiston, Mich.

Merrill & Ring are putting in about 10,000,000 feet of logs on the Duluth, Missabe and Northern Railroad. It is estimated that their mill at Duluth will cut 40,000,000 feet before the close of the season.

Statistics show that the receipts of lumber at Buffalo during 1896 were 614,194,718 feet, while the amount of lumber shipped by Buffalo dealers from other points was 217,257,000 feet, making a total of 900,000,000 feet handled by Buffalo dealers.

The Central Lumber Company, of Saginaw, Mich., is putting about 9,000,000 feet of logs into Blind river, Ont., to be towed to Saginaw next spring. The company will probably do some custom sawing in the spring before their Canada logs reach their mill.

## FOREIGN AUCTION SALES.

Churchill & Sims, London, Eng., held an auction sale of Canadian goods on the 12th inst., at which the following prices were obtained:

Per steamer "Rosarian," from Quebec—12/13x3x11 1st pine, £23; 12/14 x 3x8/10 1st pine, £16 15s.; 9/10 x 3 x 6/10 1st pine, £15. Per steamer "Netherholme," from Quebec—5 pcs. 1st class square oak, 294 c. ft., £4 per load; 7 pcs. 1st class square oak, 408 c. ft., £4; 7 pcs. 1st class square oak, 525 c. ft., £4 2s. 6d. Per steamer "Rosarian," from Quebec—25 pcs. 1st class fresh birch, 18 in. and upwards, 914 ft., £12 2s. 6d. per load; 33 pcs. 1st class fresh birch, 16 in. and under 18 in., 714 ft., £2 7s. 6d. Per steamer "Boston City," from Halifax—6/14x4x10/13 spruce, £7; 10/27x4x7 spruce, £6 15s.; 12/14x3x11 spruce, £8; 15/25x3x11 spruce, £7 15s. Per steamer "Derwent Holme," from Montreal—11x3x9 1st pine, £16 10s.; 10x3x9/10 1st pine, £16 5s.; 11 x 3 x 6/7 1st pine, £15. Per steamer "Lovstakken, from Quebec—12/13 x 3 x 11 1st pine, £23; 12/13 x 3 x 8 1st pine, £15; 12 x 3 x 4/7 1st pine, £15. Per steamer "Kington," from Quebec—13 x 3 x 9 3rd spruce, £7 10s.; 13 x 3 x 9 3rd spruce, £7 10s. Per steamer "Sarmatian," from Quebec—11 x 3 x 12/13 1st pine, £20 10s.

At an auction sale of pine and spruce deals held by Allison, Cousland & Co., Glasgow, Scotland, the result was as below:

| | | Per cubic ft. |
|---|---|---|
| Quebec 1st pine deals | 9/16x 7/10x3 | 2s. 5½d. |
| " " ends | 4/8 x11/21x3 | 2s. 5d. |
| " " scntlgs. | 14/16x 4/6 x3 | 2s. 2d. |
| " " planks | 10/16x 8/23x2 | 2s. 6d. |
| " " " | 10/16x10/23x1½ | 2s. 1d |
| " 2nd pine deals | 9/13x12/15x3 | 2s. 2d. |
| " " " " | 9x 11 x3 | 1s. 8½d. |
| " 3rd " " | 13x 9/10x3 | 1s. 1¾d. |
| " " " " | 13x 9 x3 | 1s. 1½d. |
| " " " " | 14/16x 7/10x3 | 1s. 1½d. |
| " 4th " " | 12/16x12/23x3 | 1s. |
| Quebec red pine deals | 16/17x 11 x3 | 1s. 2d. |
| " " | 10/13x 9 x3 | 11¾d. & 1s. |
| " " | 13x 8 x3 | 10½d. |
| " " | 13x 7 x3 | 10d. |
| " " | 9/16x 5/6 x3 | 9d. & 9½d. |
| " " | 20/32x 7/11x5 & 6 | 1s. 1½d. |
| " " | 13/32x 8/11x4 | 1s 1d. |
| " " | 12/31x7/11x2¾ to 3¾ | 11¾d. to 1s. |
| St. John spruce deals | 14&17x 9 x3 | 10½d. |

## GEORGIAN BAY STOCKS.

An estimate of the quantity of lumber on hand at the principal Georgian Bay points, furnished The Timberman, of Chicago, by a lumberman interested in operations in that district, places the total amount at 442,000,000 feet. The figures of the different points are as follows:

| | Feet. |
|---|---|
| Penetanguishene | 17,000,000 |
| Midland | 30,000,000 |
| Victoria Harbor | 18,000,000 |
| Waubaushene | 23,000,000 |
| Coldwater, Fesserton | 10,000,000 |
| Longford | 16,000,000 |
| Severn Bridge | 12,000,000 |
| Gravenhurst | 25,000,000 |
| Huntsville, Bracebridge and vicinity | 25,000,000 |
| Burk's Falls, Berrisdale, South River, Sundridge | 12,000,000 |
| Callander | 10,000,000 |
| Warren | 7,000,000 |
| Sundry lots at Sudbury, Chelmsford, etc | 15,000,000 |
| Parry Sound | 18,000,000 |
| French River | 16,000,000 |
| Byng Inlet | 5,000,000 |
| Collins' Inlet | 5,000,000 |
| Little Current | 12,000,000 |
| Spanish River | 12,000,000 |
| Cutter | 18,000,000 |
| Serpent River | 22,000,000 |
| John's Island | 10,000,000 |
| Thesallon | 5,000,000 |
| Collingwood | 10,000,000 |
| Owen Sound | 10,000,000 |
| Wiarton | 5,000,000 |
| Fenelon Falls | 15,000,000 |
| Bobcaygeon | 15,000,000 |
| Peterborough | 5,000,000 |
| Lakefield | 3,000,000 |
| Trenton | 6,000,000 |
| Central Ontario Railway | 10,000,000 |
| Small mills | 20,000,000 |
| Total | 442,000,000 |

## BUSINESS NOTES.

John Kells, lumber dealer of Millbrook, Ont., is reported to be offering to compromise.

C. J. Rosborough & Co., lumber dealers, Grenfell, Man., have dissolved partnership. C. J. Rosborough will continue the business.

The Georgian Bay Sawlog and Salvage Co., Ltd., Toronto, is going into liquidation. Mr. A. C. Neff, Wellington street east, has been appointed liquidator.

Messrs. Niebergall have sold the Buchanan mill at Staples, Ont., to the Niebergall Stave & Lumber Co., together with their supply of logs, about two million feet. The Niebergall Stave & Lumber Co. have bought the stock of the Dickenson mill at Staples. The company has now over five million feet of logs in stock at Staples.

Bark Siddartha is reported chartered at St. John, N. B., to load deals for an Irish port at 47s. 6d.

## LUMBERMAN'S INSPECTION BOOK.

Send four 3-cent Canadian postage stamps for a copy of the LUMBERMAN'S VEST-POCKET INSPECTION BOOK, containing rules for the inspection of Pine and Hardwood Lumber in the leading markets of Canada and the United States.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Ottawa to Oswego, $1.90 per M ft., Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5c. per 100 lbs.; Arnprior to Montreal, 7c. per 100 lbs.; Parry Sound to Montreal, 12½ cents per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs.: Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, 22c. track, 24c. lightered, per 100 lbs. Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany 17 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway have been made a fixture, as below. Of any intended change due notice will be given lumbermen.

General instructions in shipping by Grand Trunk are embodied in these words in the tariff schedule: On lumber in carloads, minimum weight, 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be charged, and must not be exceeded. Should it be impracticable to load certain descriptions of light lumber up to 30,000 lbs. to the car, then the actual weight only will be charged for, but not less than 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond, to the same destination. For instance, the rates from Tara or Hepworth to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Wiarton to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, but in no case are higher rates to be charged than as per mileage table published on page 9 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale and Sundridge, to Toronto, 8c.; South River, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 11c. The rates on hardwoods average about from 1c. to 2c. per 100 lbs. higher than on softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other

PARKER C RONAN, Manager.

valuable woods, application must be made to the district freight agent.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Cook's Mills, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Central Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods.

MODIFICATION OF HARDWOOD RATES.

THE Grand Trunk Railway and Canadian Pacific have made the rates on hardwoods from certain points to Toronto and Hamilton as follows. The regulations are over the signature of Mr. John Earls, W.D.F.A., of the G. T. R., and given in reply to a letter from Toronto hardwood men:

"After careful consideration we have come to the conclusion that, on and after Jan. 1st, 1895, a modification will be made in the present arrangements for hardwood lumber, to the effect that the rate will be 7½c. per 100 lbs from our Northern and Northwestern branches to Toronto and Hamilton. This rate, however, will not apply from main line points and the straight run between Toronto, Sarnia and Windsor; also that so far as rates on common lumber to points like Guelph, Galt, London, Woodstock, Ingersoll, etc., from all lumber shipping stations the rate will be the same on hardwood as on pine." On the old principle, we suppose, that half the loaf is better than none, hardwood men have something, possibly, to be thankful for, though there is no good reason why the rates generally on hardwood should not be as low as on pine. It is understood that the C. P. R. rate will be made uniform at 7½c. from same points.

# THE NEWS.

—John Higgins is erecting a new saw mill at Metcalfe, Ont.

—A planing mill will be started in the spring at Aylmer, Que., by John Smith.

—A bill has been introduced in the Nova Scotia legislature to incorporate the Shelburne Lumber Co., of Shelburne, N. S.

—The late Richard Nagle, of Peterboro', Ont., left an estate valued at $74, 253, of which $15,000 is invested in timber limits.

—Mr. Geo. F. Webster, of Creemore, Ont., is building a new portable saw mill of his own design. He reports business quiet, very few logs being taken out.

—Fifty-five failures of lumber dealers were reported during last year, with total liabilities of $1,402,763. In 1895 the number was 43, and the liabilities $413,992.

—For the month of December exports from Ottawa to the United States were as follows: Lumber, $505,229.43; lumber for export, $65,604.87; sulphite pulp, $3,763.12.

--The Yokohama Gazette states that owing to a great rise in the price of timber, Japanese timber dealers of Yokohama propose to import timber from Victoria, B.C.

—Lumbering operations are being actively carried on in Anticosti this winter, and both colonization and building is to be prosecuted this year on a much larger scale than heretofore.

—Messrs. Hanson Bros., of Nashwaak, N. B., made quite a find a few days ago. They were cutting lumber in the woods and suddenly came across a bear and three cubs, enjoying their winter's sleep.

Mr. Thos. Southworth, Chief of the Ontario Bureau of Forestry, has received a letter from Mr. Edward Harris, enquiring how to raise a forest on 2,000 acres of land belonging to a preserve at Long Island.

—Small saw mills are springing up rapidly in the vicinity of Burk's Falls, Ont. Those of Thos. Spiers, on the little East river; M. Poirer, on the East river; Albert Scott, on Lake Vernon, and Wm. Gall in Brunel, on the Baysville road, have lately been started.

—W. R. Huntley, master shipbuilder, of Parrsboro, N. S., has obtained a contract from S. P. Benjamin, Port Williams, to build five scows and a steamer, to be used in bringing his lumber down the Avon river to a place of shipment. Mr. Huntley will build them at Port Greville.

—At the annual meeting of the Tourville Lumber Mills Company, held in Montreal a fortnight ago, Mr. Edward Ouellette was appointed general manager. Mr. Rodolphe Tourville was elected president, Mr. Napoleon Gill vice-president, Mr. Rodolphe Forget director, and Mr. Arthur Tourville secretary.

—Incorporation has been granted to the London Box Manufacturing and Lumber Co., with a capital of $35,000, to manufacture from wood and deal in building material. The promoters are: Messrs. Frederick George Rumball, John Watson, Edward Grant, John Alexander Smith and John Shannon.

—The Winnipeg Free Press states that Mr. D. B. Hanna, superintendent of the Lake Manitou Railway and Canal Co., accompanied by some eastern capitalists, recently examined the timber resources of Lake Winnipegoosis, with the object, it is said, of developing the lumber interests of the country.

—The manager of the Takush Harbor Lumber Co., of Vancouver Island, B. C., has an idea that there is big commercial value in oil extracted from yellow pine. He accordingly engaged an expert to experiment, but in the course of this the expert was badly injured by an explosion of the highly inflammable oil, resulting in a broken arm.

—The St. Anthony Lumber Co., of Whitney, Ont., recently cut a pine log which measured 72 inches, or six feet, across the butt, and 66 inches at the smallest diameter of the top end. It will make, if sawn into boards, four thousand and sixty feet of lumber. A picture of the big log is to be kept as one of the records of the company.

—The report of Mr. W. L. Haight, of Parry Sound, who was appointed by the Ontario government to investigate the cause of the fires which last summer destroyed an immense area of timber in the Biscotasing district, has just been sent to the Commissioner of Crown Lands. The report states that Mr. Haight's inquiries have led him to conclude that the fires were deliberately started for the purpose of destroying the timber, so that the lands could be secured for mining, as rich deposits of mineral had been found there.

—Authority has been given by order in Council to the Sauble & Spanish Boom & Slide Company of Algoma, Limited, to charge toll at the rate of 30 cents per thousand feet for the use of their works on the Spanish river, Ontario, instead of three cents per log of seventeen feet and under, and to authorize the charge of 30 cents per thousand feet as a basis upon which the rates for other timber be charged.

—The annual meeting of the shareholders of the Canadian Rubber Co., of Montreal, was held early last month. When the annual report had been adopted, the following gentlemen were elected directors for the ensuing year: Messrs. Andrew Allen, President; Hugh McLennan, Vice-President; W. J. Withall, Frs. Scholes, J. B. Learmont, H. Montague Allan, W. H. Benyon, Andrew A. Allan, John Thos. Molson.

—Incorporation has been granted to a company to be known as "King Brothers," composed of Edmund A. King, merchant, of St. Pacome; Charles King, merchant, of Lyster, and James King, merchant, of Levis; William S. Thomas, of Quebec, manager; William McNaughton, of Pabos, agent, to own and operate saw mills and to deal in lumber and timber generally, in the province of Quebec. The capital stock is $300,000.

—Incorporation has been granted to the H. Herrmann Lumber Co., of New York, to conduct the business of the late H. Herrmann. The capital is $300,000, and the officers of the company as follows: Mrs. Rosa Herrmann, President; Mr. George Herrmann, Treasurer; Mr. Geo. C. Von Stamwitz, Secretary; Mr. Chas. Bott, Assistant Treasurer; Mr. R. Mittelmann, Assistant Secretary; Mr. John Bissinger, Assistant Secretary.

—The Holland & Emery Lumber Co., of East Tawas, Mich., which is managed by Nelson Holland, of Buffalo, will commence to move their large mill from East Tawas to Byng Inlet, Ont., as soon as the ice leaves the bay. The mill will be moved on vessels as nearly intact as possible. As it will be impossible to begin pile-driving and dock-building at Byng Inlet until the frost is out of the ground, it will probably be August before any sawing is done there.

## CASUALTIES.

—A young man named Angus McKenzie was killed in Van's lumber camps, Springhill, Que., while felling a tree.

—Melville Goodwin, head sawyer for Mr. Barnhill, of Shulee, N. B., was killed by a deal striking him in the forehead.

—Thos. J. Pyburn, of Gravenhurst, Ont., was rolling logs from a sleigh to the dump down the river bank, when he was jammed by a log against a tree trunk, and died in three hours.

—Jos. Beranger, employed in Mr. Chalifour's saw mill at Quebec, met his death while placing a strap on a pulley wheel recently. He was caught by the revolving shaft, and whirled around it like a flash.

## PERSONAL.

Mr. Thomas Kelly, lumber merchant, of Somerset, Que., has been elected mayor of that town for the ninth term.

Mr. E. C. Geoffrey, B. A., delivered a lecture in the University Biological Building, Toronto, on "Oaks and Their Ancestors."

Mr. W. H. Winnett, lumber merchant, of London, Ont., was elected alderman for that city at the municipal elections last January.

Mr. P. G. Mahoney, the well-known lumber merchant of Westmoreland, N. B., sailed recently from Halifax for Liverpool, Eng. Mr. Mahoney will visit the leading centres of Europe before his return.

D. H. MacDowell, an old resident and leading business man of Prince Albert, N. W. T., engaged in the lumber trade, has removed to Toronto. He was tendered a banquet by the citizens before his departure.

The death took place at Indiantown, St. John, N. B., last month, of Mr. Moses E. Cowan, one of the most respected residents of the city. Deceased was born in 1830, and for many years was a lumber surveyor and later conducted a saw mill under the firm name of Cowan & McGinty.

## PUBLICATIONS.

An interesting publication for lumbermen is the list of shipping marks on sawn and planed wood, published by Wm. Rider & Sons, London, E. C.

We have to acknowledge receipt of a copy of the proceedings of the American Forestry Association, at the Thirteenth and Fourteenth annual meetings at Washington, and at the summer meetings at Brooklyn, N. Y., and Springfield, Mass. An article by Sir H. G. Joly de Lotbiniere, the first vice-president of the association, is one of the interesting features.

"Bearings and Lubrication," a book of upwards of 200 pages published by Wm. Rider & Sons, Limited, 14 Bartholomew Close, London, E. C., contains much useful information for every user of machinery. The aim of the writer has been to give such practical information as will enable purchasers of machinery to make a choice of the proper bearings for different duties, and of the kinds of lubricants required. The book is freely illustrated, and sells at 3s. 6d.

The regular annual special number of our esteemed contemporary, Timber, of London, Eng., to hand a few days ago, is a voluminous publication of much merit. An interesting article on "The Timber Trade of Ireland" is followed by lengthy descriptions of various classes of woods, including pitch pine, mahogany and cedar, jarrah and karri, all of which are accompanied by illustrations of more than ordinary interest. Not the least important is an extensive write-up of the slate trade of Great Britain, and the liberal advertising paronage shows that the efforts of the publisher to produce a first-class journal are fully appreciated.

## ENTERPRISING AMHERST CITIZENS.

A CORRESPONDENT of the St. John Sun, referring to the extensive timber limits held by citizens of Amherest, N. S., says:

Amherst is not a lumber shipping centre, nor beyond a small mill or two in its vicinity is it a lumber manufacturing centre. It is therefore the more singular to learn that citizens of the town have been reaching out and investing very extensively in timber lands. But such is the fact, and in future a notable portion of the lumber trade of Nova Scotia will be directed from Amherst. This is the result of some important deals recently consummated.

Take, for instance, the Sheet Harbor property on the Atlantic coast. A company to be known as the Sheet Harbor Lumber Co., whose members are Hon. A. R. Dickey, D. W. Douglas, N. A. Rhodes and N. Curry (of Rhodes, Curry & Co.) of Amherst, and Samuel Baird, of Leicester, owns 40,000 acres of selected spruce lands, with combined saw and pulp mill. Right adjoining this, on the East river, Hon. A. R. Dickey owns 44,000 acres, with a saw mill and sulphite pulp mill, the latter costing $110,000. This property will be operated by a company to be called the East River Lumber Co. Again to the east of the last named property, which it adjoins, Hon. Mr. Dickey owns a mill and 18,000 acres of hardwood, bearing among other timber 50,000,000 feet of birch. Still farther east, near Liscomb, he owns 4,000 acres of spruce land and a mill site. Sum these all up and you have 106,000 acres of timber land.

Then take St. Mary's river, Guysboro, near Liscomb, already referred to. Here a company to be known as the Nova Scotia Lumber Co., the members of which are Dr. C. W. Hewson, W. T. Pipes, Clarence Purdy and Samuel Freeman, of Amherst; John W. and Job Seaman, of Barronsfield, and John Gillespie and Golden K. Prescott, of Shulee, owns about 70,000 acres of splendid timber land, with saw mill and a mill for making box shooks. This same company owns 31,000 acres recently purchased at Economy, below Parrsboro. The operations of the Shulee Lumber Co. are also directed from Amherst. They have 10,000 acres. Sum these up and you have 111,000 acres more.

There is still the Newville Lumber Co., at Newville, near the Parrsboro shore. It has 15,000 acres, and its members are Rhodes and Curry, W. W. Black (son of T. R. Black, M. P. P.), G. A. Fowler and C. A. Lusby. Rhodes, Curry & Co. own another 15,000 acres on the line of the I. C. R. Here is a total of 30,000 acres.

Add all the totals and you have a grand total of 247,000 acres, or over 386 square miles, and comprising some of the finest timber lands in Nova Scotia. On all the properties except that at Economy, operations are being carried on this winter.

As illustrating the old saying that there are two sides to every question, Mr. William McGregor, M. P., of Windsor, states that from Michigan and Maine more men go to Canada to work in the lumber woods than there are persons who go from all Canada to the United States. Annually 300,000,000 feet of logs are rafted to the United States, he says, mainly from the Georgian Bay district to the mills in Michigan, and the same gangs who work in the mills in summer go into the Canadian woods in winter and cut the logs. Large numbers also go from Maine to New Brunswick.

* * *

HON. J. B. Snowball, of Chatham, N. B., it will be remembered, took an active interest in the framing of the French treaty, and as an extensive shipper of spruce deals to France, had hoped that the reduced duty would increase the demand for spruce deals in the French markets. As yet no appreciable increase in the volume of trade has occurred, although Mr. Snowball anticipates an improvement during 1897. The greatest advantage to deal shippers, he says, is in the fact that the treaty opens up a market for a class of deals which are unsaleable in other markets. For instance, the Irish market calls for a twelve foot length, the Spanish market for a fourteen foot length, and the French market for a sixteen foot length. In this way the shipper is enabled to sort out a cargo of deals according to the market for which they are intended.

* * *

"ELI" does not wish to be understood as having anything but the kindliest feelings for the saw mill man, and if at any time he has dropped a word which has aroused the anger of any one of them, he humbly apologizes, and begs now to shake hands with them and be friends. In his efforts to present to them some of their shortcomings, he has not been prompted by a fault-finding disposition, but rather by a desire to improve the position of the mill man. Let me impress upon all manufacturers the danger of misrepresentation. This warning was suggested to me by a chat which I had the other day with a wholesale dealer, who was relating some of his experiences in the trade. This dealer desired a car load each of elm and maple for a customer, and was advised by a mill man that he had exactly the quality and quantity of stock he desired. Upon arriving at the mill the dealer discovered that he had only one-half car of each, and he naturally felt somewhat annoyed at the situation. Not saying a word, however, he went to another mill and purchased sufficient stock to complete his two cars, for which he was obliged to pay a higher price, and charged his expenses as well as the difference in cost to mill man No. 1, who had misrepresented his stock. I asked the wholesaler how he accounted for this action, to which he replied that the mill man no doubt expected that he would accept some other stock for the balance of the car, and thus succeed in selling his lumber. The lesson received will undoubtedly have its effect. To the wholesale dealer the hardwood manufacturer must look for his trade, and it should be the aim of every mill man to cultivate friendly relations.

* * *

MR. D. E. Sprague, of Winnipeg, returned a fortnight ago from a visit to his lumber camps, situated on Rosseau river, about 120 miles south-east of the city. Mr. Sprague drove the entire distance, going out when the thermometer was more than 30 degrees below zero. His method of protection from the cold is somewhat unique and interesting. In front of his sleigh is a small house built of canvas, in which there is ample room for Mr. Sprague and the driver to move about. An oil stove serves the double purpose of keeping the interior quite warm and supplying a range for Mr. Sprague to do his cooking on. A large couch makes a very comfortable bed, and under it is kept a full supply of provisions. The lines from the horses pass through a slit in the canvas, and the road is seen through a window in front of the peregrinating home. A head light throws its beams between the horses heads on to the trail, and there is no danger of straying from the beaten path on the darkest night. The interior is so warm, even in the coldest weather, that it is not necessary to wear a cap, much less an overcoat. The rear of the sleigh is occupied with forage for the horses. A trip to the lumber camps and return is a drive of four days' duration, and in Mr. Sprague's turn-out it rivals in comfort a jaunt in a palace car.

* * *

MR. Thomas Southworth, Clerk of Forestry for Ontario, returned last month from a trip to the Rathbun Company's limits in Hastings county, where he spent a few days enjoying the comforts of a lumberman's life. That he was royally entertained may be judged from the good natured manner in which he refers to his visit. Mr. Southworth is an enthusiastic admirer of the method of lumbering pursued by the Rathbun Company. Speaking along this line he said: "It is simply astonishing to observe the manner in which the company utilize the forest products. Trees which other lumbermen would cut down and leave on the ground, owing to defects, are cut up by the Rathbun Company and converted into different manufactures. This means that the government not only receives a much larger revenue from crown dues, but also that the utilization of this timber provides employment for a vast number of men, which is an important consideration at this time. Of course, the immediate profits under this method of lumbering would not be as great as though only the best timber was taken off, but would be spread over a greater number of years. Another advantage is in the direction of reforestation, as young trees cannot but flourish much better where the ground is well cleared up."

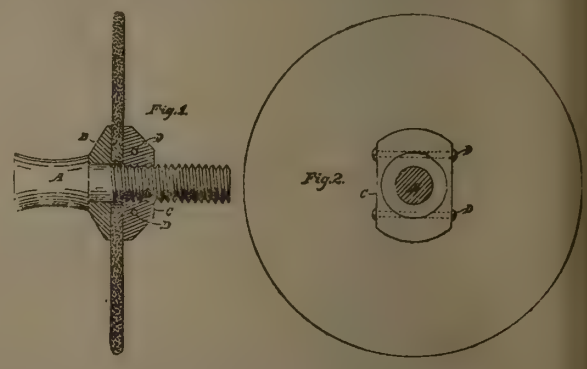
* * *

MANY readers of this journal will remember the Dollar family, who were at one time prominently connected with the lumber business in Canada and removed to California a few years ago. The death of Mr. John M. Dollar, shortly afterwards, was referred to in this journal. Messrs. Robert and James Dollar are now located at San Francisco, where they are known as the Dollar Lumber Company, and manufacture redwood and pine lumber, etc., with mill at Markham. They have not forgotten their old Canadian friends, even after residing for a number of years in Uncle Sam's country, but still read with interest the news from their old locality. In writing to the LUMBERMAN Mr. James Dollar says: "I look for your paper regularly, as I like to see what is going on among those I knew. The redwood business is very dull here at present, although we look for a change for the better shortly. We (the Dollar Lumber Company) are making arrangements to take out a cargo of sugar pine for Liverpool, that is, a cargo of board timber; we have our man now up on the mountains looking up timber for that purpose, and he reports favorably. We will have to haul it 30 miles on trucks. How would that answer you Canadians? Then we drive it down the river, where it is loaded on the vessel." Mr. Dollar seems quite satisfied with the business success with which he has met in his new field. He refers with regret to the loss by fire of a portion of the parliament buildings at Ottawa.

## A MAKE-SHIFT SAW GRINDER.

THERE is no excuse for any mill that has a turning lathe to go without means for gumming and grinding saws, says a writer in the Wood-Worker. The sketch herewith shows a very simple arrangement, and one that will answer the purpose in the absence of a more improved equipment. Fig. 1 shows the apparatus so plainly that an explanation is hardly necessary, but in order to make it clearer I offer the following:

A, Fig. 1, is a screw taken from an old hand-screw and cut off about six inches long. Saw out a collar about three inches in diameter, bore hole through centre large enough to slip over



screw, and glue fast to shoulder of screw, as shown at B, Fig. 1. When dry, place in the lathe and turn up true on face, also give a bearing for hole in wheel to fit on snugly. For a nut, use a part of hand-screw jaw that has threaded hole to fit screw. Cut off the desired length, as shown at C, Fig. 1. Put a rivet through each end, as shown at D, Figs. 1 and 2; these will keep the nut from splitting.

By placing your emery wheel on this make-shift arrangement and the whole in the turning lathe, you can gum your saws as nicely as on any ordinary emery grinder. For a rest, turn a wooden pin to fit in rest socket; this will enable you to turn your saw in any direction.

The Goderich Lumber Co., in remitting their subscription to THE LUMBERMAN for 1897, write: "We are much pleased with it. When it comes to hand, it is the first paper we look at."

## BRITISH COLUMBIA LETTER.

[Regular Correspondence of the CANADA LUMBERMAN

### ANOTHER COMBINE.

A COMBINE is being formed to take the place of the Central Lumber Company, which went to pieces on the first of the year. The new organization will, however, only endeavor to control the foreign trade, and consequently we bespeak for it greater prosperity, the refusal of some of the smaller mills to enter the former combine being really the cause of its failure. The mills which have already signified their intention of entering the new combine are the Tacoma Mill Co., Port Blakely Mill Co., Puget Sound Lumber Co., of Port Gamble, Washington Mill Co., of Port Hadlock, British Columbia Mills, Timber and Trading Co., Vancouver, Moodyville Land and Saw Mill Co., the Victoria Lumber and Manufacturing Co., and the Brunette Saw Mill Co., of New Westminster, while it is believed that others will come in before the final organization.

The St. Paul & Tacoma Lumber Company and the Bellingham Bay Improvement Company are offering opposition to the trust, but on the other hand two British Columbia mills that refused to join the Central Lumber Company are parties to the new agreement. In the event of the organization being successfully accomplished operations will begin about April 1. It is the intention to have joint representation in all the foreign markets. The business will be equitably divided among the mills and profits shared accordingly.

Mr. R. P. Rithet, one of the directors of the Victoria Lumber & Manufacturing Co., states that he believes the new organization will prove a success. As far as he knew all the mills which are doing a large export business are ready to join. Mr. Rithet explained that the object of the organization was not to force big prices, but rather to secure more uniformity of prices in the foreign markets and to extend the foreign trade in a systematic way.

### VICTORIA LUMBER AND MANUFACTURING COMPANY.

The annual meeting of the Victoria Lumber and Manufacturing Company was held last month, at which officers were elected as follows:—Messrs. J. A. Humbird, of St. Paul, president; R. P. Rithet, vice-president; E. J. Palmer, manager; and W. H. Phipps, secretary. These, with D. Humbird, form the board of directors. The mills of the company at Chemainus are running day and night to fill orders.

### KOOTENAY LUMBER COMPANY.

The Kootenay Lumber Company, Ltd., composed of Messrs. Hewitt Bostock, Archer Martin and Ian Coltart, has been organized, with head office in Victoria. The object is to acquire the lumber business of the Kootenay Lumber Co. at Lardeau, where a new mill has been put in operation. The machinery is driven by a Pelton wheel, the power being derived from the waters of the creek, which is dammed at a height of 300 feet above the mill, from whence the water is led through a 12-inch supply pipe; this narrows down to a 2-inch pipe, which plays on the wheel, which is only three feet in diameter. Sufficient power is thus developed to drive all the machinery of the mill. Over 40 men are at present employed in and around the mill.

### COAST CHIPS.

A shipment of railway ties has been made from Vancouver to Bombay, India.

The Royal City Mills are building a new dry kiln at New Westminster, 40×75 feet.

The Nelson Saw Mill Co.'s mill near Trail, which was burned recently, is being rebuilt on a larger scale.

R. Miller is building a saw and shingle mill six miles south of Rossland, with a daily capacity of 30,000 feet of lumber and 50,000 shingles.

The British government will, it is said, in future purchase whatever fir is required for government work in British Columbia, instead of on Puget Sound.

The shingle mill of the Pacific Coast Lumber Company, New Westminster, has recently been re-fitted with new and improved machinery, and is running twelve hours per day.

The suit of the Queen vs. Victoria Lumber Co. has been settled, the decision being against the latter, by which they will be compelled to pay taxes on certain lands amounting to about $15,000 per year.

NEW WESTMINSTER, B. C., Feb. 18, 1897.

## NEW BRUNSWICK LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

IT is reported that Messrs. Watson & Todd, of Liverpool, will open an office here in the spring, their intention being to ship lumber from this port the year round. The past two winters they have shipped large quantities of deals by the Beaver line of steamers to Great Britain, and their trade from this port will, no doubt, assume larger proportions in the near future. Mr. Martin Power has charge of their business.

To the enterprise of Mr. G. J. Vaughan, of Chatham, will be due the operation of two mills on the Miramichi which have been closed for several years. Mr. Vaughan has lately secured control of the Black Brook mill at Loggieville and the Kerr mill above Douglastown, and is getting out a stock of logs for both. The former will cut about eight million feet, and the latter probably four million.

Donald Fraser & Sons will close down their Aberdeen mills next month for the purpose of adding some new machinery and making necessary repairs. A new boiler will be put in, and the two engines in use at present will be replaced by a larger one.

In the High Court of Justice, Dublin, recently an appeal was allowed in the case of Hannevig v. Dixon & Sons, Belfast. This was the case of the owners of the Norwegian bark Rolf, who brought an action for £500 for demurrage while the vessel was loading at the Miramichi. The lower court decided in favor of plaintiff and defendants appealed on the ground that six witnesses at least could be found in New Brunswick to testify that the time demurrage was claimed it was so stormy that timber could not be put on board.

### BITS OF LUMBER.

It is rumored that Mr. Ross, of St. Stephen, will erect a saw mill at Fredericton.

Mr. John McLeod has completed the building of a new lumber mill at Black River.

Mr. Harding, of Coal Creek, intends building a steam saw and grist mill at Douglas Harbor.

Hale & Murchie intend building a new chimney at their mill at Fredericton in the spring.

Messrs. Walter J. Mills, of the firm of S. H. White & Co., Sussex, and Harley White, of Apple River, are at present on a trip to Bermuda and Trinidad.

The exports of forest products from St. John during the month of January were valued as follows: Deals, $54,353; deal ends, $221; laths, $1,333; planks and boards, $11,895; scantling, $6,632.

ST. JOHN, N. B., Feb. 18, 1897.

## MICHIGAN LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

ON the 26th of January last a meeting of Michigan manufacturers sawing Canadian logs was held to consider what steps should be taken regarding the proposed duty on lumber. Mr. F. W. Gilchrist, of Alpena, acted as chairman, and the following committee was appointed to formulate a plan and report: Joseph Turner, Bay City; A. T. Bliss, Saginaw; W. D. Churchill, Alpena; C. E. Mould, Cheboygan; and Thos. Pitts, Detroit. This committee went to Washington the first week in February and presented a strong protest against the imposition of a $2 duty.

Labor Commissioner Morse, in his annual report, has devoted considerable space to forestry in Michigan, giving some interesting figures of the amount of standing timber in each county. There are 6,166,977 acres of standing hardwood in the state, 775,208 acres of standing pine, and 1,468,166 acres of hemlock. There are eighteen counties without any pine whatever and 32 with less than 100 acres each. Nearly all the standing pine is in the upper peninsula.

The new mill of Smalleys & Woodworth, Bay City, is nearing completion. The firm have several camps in operation, and will yard about 10,000,000 feet of Norway for next season's sawing.

A new development in Michigan lumbering furnishes a profitable market for the hitherto valueless slab piles. Several prominent salt manufacturers at Saginaw have entered into a deal with the Hamilton & Merryman Company, of Marinette, to put in special machinery for getting out salt barrel staves from pine slabs. If the move proves profitable other users of salt barrels will enter the market, and another article of mill waste will thus be provided for.

The Saginaw Courier estimates that the Michigan production of lumber and shingles in 1896 from Canadian logs was about 12 per cent. of the total quantity cut in Michigan, the figures being 253,759,846 feet.

The lumbermen are complaining of the lack of snow for logging purposes. In the northern section of the state there has been less than six inches in depth.

SAGINAW, Mich., Feb. 18, 1897.

It is said that castor oil will keep leather belts from slipping. The oil penetrates the leather, makes it soft and pliable, and leaves no sticky surface to collect the dust.

An innovation in the construction of floors is the use of a special preparation of paper pulp invented by Otto Kraner, of Chemnitz, Saxony. He calls the new material papyrolith. It comes in the shape of a dry powder, which is mixed with water, dries in a short time, and may be spread and planed down upon a foundation of either natural or artificial stone, cement or wood. The wearing quality of papyrolith is very remarkable, as are also its qualities of perfect solidity, of being a bad conductor of heat, and of deadening all noise. A further advantage is the considerable amount of elasticity which it possesses, and perfect safety from fire. Since the mass may be tinted with almost any color, it is possible to lay down several layers in different colors alongside of each other, or to lay a floor with a mosaic design. Parquets with varied colored borders can also be laid down, and the same material may be used for wainscotting and stucco work, as also for panels and other decorative and architectural purposes. Mr. Kraner has also recently succeeded in producing a material similar to Linerusta Walton at only one-tenth the cost of that expensive material.

## SHAVINGS.

The largest single wood pulp plant in the world is that of the Hudson River Pulp and Paper Co., at Corinth, N. Y., which consumes over 30,000,000 feet of spruce per annum.

Vertical running belts should be drawn tight enough so that the belt will cling to the lower pulley. Laced belts often break where connected, on account of friction caused by slipping and movement between the lace and belt, which wears away the lace.

Russia has 503,000,000 acres of forest; Sweden and Norway, 62,000,000 acres; Austria, 45,000,000 acres; Germany, 34,000,000 acres; Turkey, 25.000,000 acres; Italy, 14,000,000 acres: Switzerland, 1,700,000 acres; France, 22,000,000 acres; Spain, 8,000,000 acres; Great Britain, 3,000,000 acres.

To those who wish to know when lumber is dry, a writer says that the surest way to tell is when the heat swells the lumber and it becomes larger when heated than when cool, the same as iron does. You can rely on it being dry. This seems to be the nearest to a solution of the problem of anything yet.

The last page of Munsey's Magazine has been sold for one year to four advertisers, each of whom occupies a quarter of a page and pays $6,000, making a total of $24,000 for the page. One line in the Youth's Companion, one time, costs $3, while a page in the Ladies' Home Journal, one time, costs $4,000.

If you want to reduce your cost of insurance, equip your plant with automatic sprinklers, light it with electricity, and incidentally locate a reel of hose and a steam pump in such a way that your mill crew will form an efficient fire brigade. To the extent that you reduce the hazard, insist upon a reduction of your premium.

The Chicago Timberman estimates that the agricultural implement manufacturers of the United States use a total of 1,448,293,750 feet of lumber annually, of which white pine, principally low grade stock for packing purposes, furnishes 20 per cent.; ash, 19 per cent.; oak, 9 per cent.; yellow pine, 8 per cent.; cottonwood, 8 per cent.; poplar, 8 per cent.; hickory, 7 per cent.; maple, 7 per cent.; elm, very largely rock elm, 4 per cent.; and basswood, 1 per cent.

The Ladies' Home Journal, in speaking of hardwood floors, says: "Since utility is the foundation of true beauty, the floor of a vestibule or entrance hall should be of hardwood or tiling; and of the main hall, plain hardwood or parquetry. From both a practical and artistic point of view hardwood floors are more desirable than all-over carpets, and little if any more expensive. They are not injured by contact with muddy boots or wet umbrellas, are easily cleaned, and with one or more handsome rugs laid over the centre, are almost certain to impart that air of pleasing formality so essential in a hall."

The total cost of timbering the Witwatersand mines, in the Johannesburg district, South Africa, has been nearly $1,500,000, says an exchange. The timber has mainly come from Australia and the North Pacific coast of the United States, a distance, in the latter case, of 8,000 to 10,000 miles. But a scheme is being carried out for furnishing the gold fields with a home supply. Millions of trees have been planted in the vicinity of the mines and are growing promisingly. It is thought, also, that by the opening of the timber regions in South Africa by the construction of railways the native supply will be considerably augmented.

The clever and inventive Yankees have been to Sweden and promoted a company called the Swedish Compoboard Aktiebolazet, with a capital of maximum 750,000 kronor. The object of the concern is to work a patent whereby boards are made out of offal and pulp to almost any size. Deals up to four and five feet wide have been made, stronger than ordinary wood, unignitable, and with a splendid isolating quality against heat and cold. The trials that have been made have turned out quite satisfactory, and a great future, the promoters feel sure, awaits the new article, and we undestand that a syndicate is being formed at Stockholm to introduce it into Germany and this country. Letters addressed to the company at Stockholm will find them.—Liverpool Timber News.

## THE INTRODUCTION OF BAND SAWS.

THE first attempt in the United States to turn out lumber with a band saw was made about twenty years ago. The saw then used, however, while excellent in cutting on a beautiful wave line, scorned the inartistic, mechanically straight one. The true theory in regard to the nature and treatment of circular saws, which were then in well-established use, was only beginning to be understood; and ten years elapsed before it was understood in reference to band saws. After the first introduction of band mills, many years passed before this constructive principle was applied to them. As soon as this took place, the band saw began to take rank, in speed of lumber making, with its powerful rival, which hitherto held the field. Tension in the cutting edge of the blade is the principle referred to, which all saws must possess in order to do their best work. In the circular saws this is obtained by hammering the central part of the saw; in the band saw it is obtained by rolling the middle portion of the blade—that is, the saw is passed through a machine between two small steel rollers under heavy pressure, which expands the middle portion of the saw throughout its entire length. Applying a straight edge to the side of a saw, either longitudinally or transversely, will show convex and concave places alternating all along the blade; but when placed on the wheels of the mill, under a four ton strain, all these kinks disappear. It then becomes one staight ribbon of steel, with its edges so tight that there is no chance for deviation in sawing. It cuts straight.—W. Trout, in "Cassier's Magazine."

### A BIG TREE.

THE Liverpool Timber News of the 30th January says: "We have heard of monster Californian and Kauri pine trees, but at least one in India is a giant even to those. It is a banyan tree. It would now be interesting to know which is really the largest banyan tree in India, since new ones are constantly being discovered that appear to dwarf the rest. Thus, a correspondent writes to a contemporary to claim that he has just discovered the biggest at Madhupur, on the E. I. railway, between Calcutta and Patna. According to him, the circumference is 440 yards and the extreme diameter 152 yards, whilst the area it covers is given as 9 bigahs 2¾ chittacks. The longest branch, not touching ground anywhere, is at the s. e. corner and measures 29 yards; and the longest branch of all, touching earth at more than one point, runs due east for 55 yards. The Timber News thinks the Yankee will have to stretch a point to beat this record."

EVERYTHING FOR Saw Mills, Wood-Working Establishments and Pulp Mills.

PENETANG, ONT., April 30th, 1896.

MESSRS. WATEROUS CO., Brantford.

GENTLEMEN,—Yours of the 29th received, and enclosure carefully noted. We have had one of your No. 1075 log chains in use in our Penetang mill for about fourteen years—as nearly as I can recollect, and we consider it about the best chain for the purpose that we have yet seen, and we have tried numbers of others.

About three or four years ago it became so worn and loose that it was necessary to heat all the links and tighten the rivets. This, however, narrowed the links some, and although we used it in this way one season, the following we knocked out all the rivets and put in new ones. Since that the chain has been doing its work the same as ever, and this is the only work we have put on it, except renewing some of the tooth plates on the bunk links, and occasionally put in a few complete bunk links, as they, receiving most of the weight of the logs, wear a little sooner, although they are made heavier. When it is taken into consideration that most riveted chains require some looking over every spring, the fact that we used this for about eight or ten years without doing a particle of repair on it speaks for itself.

A year or two ago, requiring a new log chain in our new Keene mill, we put in another of the number 1075's, although the chain we had been using was good of its kind—a steel-riveted chain.

With our chains (1075's) we have never had the links come apart through the rivet head wearing off, and do not consider them at all likely to do so, as there is very little wear on that part of the chain.

Trust this is all the information you require as to our experience with the No. 1075 chain.

Yours truly,

C. BECK, President Beck Lumber Co.

P. S.—We also have this chain in our Savanne mill.

CHATHAM, ONT., June 19th, 1896.

JAS. S. PARMENTER, Flushing, N. Y.

DEAR SIR: We take very great pleasure in being able to say from nearly one year's use of your Patent Dry Kiln, we find it away ahead of anything we ever yet tried for thoroughly drying lumber without injuring it in the least. So far we have found exhaust steam alone sufficient for our purpose, so that it absolutely costs us nothing to run it. We thoroughly dry white oak, rock elm, balm and other hardwood lumber in less time than we ever did with a blast kiln, and especially find it a splendid kiln for drying white oak hubs It does its work so naturally that neither hubs nor lumber are injured by it.

# WHY BAND SAWS BREAK

SIXTEEN REASONS, AND HOW TO AVOID THEM

Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking; analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner of properly setting irregular teeth is described. In connection with the treatise is a history of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, **ONE DOLLAR.**

## MANUFACTURING EAST INDIA TEAK.

THE following particulars of the East India teak trade, taken from a special number of Timber, of London, Eng., will prove interesting to Canadian lumbermen, the methods of manufacturing being so entirely different from those practiced in this country.

Teak wood is the product of Burmah and Siam and is exported almost entirely to Great Britain. It is used for ship-building, cabinet making, electrical and telephonic instruments, building purposes, etc. As a rule it does not require seasoning the same as other woods.

The teak tree before it is felled in the forest is "girdled" at about 2 feet and even in some instances up to 6 feet from the ground. This girdling consists in making a deep circular cut through the bark and sap into the hardwood so as to completely sever the communication between the bark and sapwood above and below the cut. The girdled tree dies after a few days, if the operation has been effectually performed, but if the smallest band of sapwood is left connecting the outer layers of wood above and below the girdle, the tree is not killed and often recovers completely, one side of the tree being clothed again in fresh bark. The girdled tree is allowed to stand one or two years, and often longer if a large tree, and being exposed to the wind and to the action of the sun, "seasons" more rapidly and more completely than a tree that has been felled green. Timber seasoned in this manner is generally drier and lighter than timber felled green.

When teak is felled green it will not float at once, and the logs have nevertheless to be placed in a sloping position to allow the sap to run out before they will float. This, however, has its disadvantages, as the logs get attacked by a large insect which bores large holes into the wood. Some would-be experts in the matter of girdling assert that the process tends to a certain extent to make the timber brittle, but this has never been proven. As, after felling, the logs have to await the rains in the forests for floating and the bulk are neaped in the first year in the creeks, it takes really three to four years from the time of girdling till the logs are actually brought into the saw mills for conversion. Therefore the teak logs can be said to be fairly seasoned before they are converted. It is true that teak in bulk seasons but slowly, but it must be remembered that the great heat in February to April seasons the logs very considerably, as can be seen by the sunsplits on the surface of the logs.

For the rapid conversion of teak, circular saws are preferred in the saw-mills, but these entail a good deal of waste owing to the thickness of blades which have to be used for such a hard wood.

Elephants are used in the forest, and without them large logs could not be worked out. A drag-hole is made at both ends of the log, which holes are also used afterwards for rafting the logs in the streams. In the case of large logs, they are tapered on the dragging side to some extent to make them slide more easily over the ground, which often causes a serious loss afterwards in the conversion and butting of squares to make them better fit for export. Where logs have to be dragged over heavy and uneven ground, the tapering of logs is much larger, and, in case of long distances, the logs wear very flat on the dragging side, and when the logs get converted the squares often show the heart on that side.

ELEPHANTS PUSHING AND DRAGGING TEAK SQUARES.

One elephant in a forest can drag from 100 to 200 logs per annum, according to distances to streams in the forests that the logs have to be dragged. A good deal also depends upon the supervision, as the elephant drivers in the forests are very lazy and unreliable, and require a good deal of urging and looking after.

In some saw mills the elephant is in use in almost every department. One will, when harnessed to a round log, drag it out of the water to the rack bench, and there with its tusks place it on the table, while at the other end his mate is waiting, and when the log has been squared he takes it in tow and marches off to the piling ground with it, where he in turn hands it over to the piling elephants, who slowly and sedately place it in its resting place.

The most difficult, or perhaps we should say intellectual, work is the piling. Say a square has been brought to the piling ground by the dragging elephant, one of the pilers would then begin by putting the squares in position alongside the pile, the end of the squares being about 6 feet past the butt of the pile. He then lifts the end of it on to the top of the pile, and with his tusks holds it in a position while his mate slowly raises the butt and with his tusks pushes it into the pile. When the pile is low, that is up to 6 feet, the front of the tusks are used in pushing the square into position, but in the case of the pile being higher the forehead is used. If, however, the square should be above the level of his forehead, the elephant throws his head well back and with the points of the tusks high in the air will push the square safely home, his mate all the time keeping a watchful eye on it to see that it goes straight and gently guiding it with his tusks when necessary.

When the squares are wanted for shipment again the elephant comes to the fore and gently one by one takes them from the pile and lays them out ready for butting, after which he pushes them down to the riverside and into the water, and if necessary will follow them into the water and hold them jammed together while the raftsmen are busy binding them.

When the day's work is over the animals revel in a bath in a river, and often nothing but the tips of their trunks are visible above the water, while their mahouts are doing balancing feats on their backs as the huge bodies loll about under the water. When the bath is over each is loaded with his evening's allowance of grass, and slowly wends his way homewards, doubtless well pleased that his labor is over for the day, and thinking of the grass on his back and what he will do with it.

An elephant is always accompanied by a mahout, either walking by his side or mounted on his back. When working the driver is always on his back. Curious as it may appear, elephants are very liable to sunstroke, and those employed at outside work, such as piling, where they are a long time exposed to the heat of the sun, only work up to ten o'clock in the morning and after three in the afternoon. The others, who are more or less under cover and work all

day, wear sun protectors while the sun is at its height.

An elephant starts work at twenty-five or thirty years of age, and is supposed to be in his prime forty years later, but upon the age that elephants live there is considerable difference of opinion. As regards strength, a good tusker can easily lift half a ton on his tusks and drag a square of three tons weight, but to see an elephant really putting forth his strength one has to see him at work in the jungle and creeks, where both log and elephant are sunk in the soft mud. It is here one realizes his enormous strength, when with a deafening roar he squares his shoulders and gives a tremendous tug, which will move the log a foot or two, and he will again flounder forward and repeat the operation till he eventually lands his charge on to the hard ground or into the water, as the case may be. In the matter of hard work, a mill elephant lives an easy life compared to his brother of the jungle. One might be compared with a man whose calling is of an intellectual nature and the other the manual laborer.

## THE SUTHERLAND, INNES COMPANY.

It may not be generally known that the Sutherland, Innes Company, Ltd., of Chatham, Ont., are the largest manufacturers of cooperage stock in the world. With agents in a large number of foreign countries, and splendid connections at the mills, they are enabled to ship advantageously to every point which they desire to reach. That the chief office of such an extensive concern should be located in Canada is very gratifying, and justifies the brief description of the company which we give below :

The concern was organized twenty-five years ago, and was then known as Hay, Sutherland & Innes. Mr. Hay and the president of the company were the organizers of the firm, but shortly afterwards Mr. Hay retired and the name was changed to Sutherland & Innes. In the year 1888 Mr. James Innes, jr., was admitted as a partner, and the company became known as Sutherland, Innes & Co.

In 1893 the firm was incorporated as a limited liability company under the present title of The Sutherland, Innes Co., Limited, S. J. Sutherland being president ; James Innes, sr., 1st vice-president ; Wm. Ball, 2nd vice-president; and James Innes, jr., secretary. These persons have continued in office ever since.

The president, Mr. Sutherland, whose portrait we present, is 43 years of age, and makes his headquarters at Chatham. Besides exercising a general oversight, he also looks after the tight barrel and box shook business. Mr. Innes, jr., is the office man, and handles the finances of the company, as well as giving attention to the slack barrel end of the business. Mr. Innes, sr., has charge of the office at Liverpool, Eng.

The following particulars of the proceedings of the annual meeting held last month will serve to show the extent of the company's business :

After the board of directors were re-elected, the auditor's report was read, which showed that after wiping off $23,347.56 for depreciation of mill properties and bad and doubtful debts, there remained a net profit, after all working expenses of management, of $66,170.33, or equal to 22 per cent. net earning on the paid-up capital stock of the company. The rest account profits for 1896 and contingent account amounted to more than $100,000, out of which the dividend of 1896 has yet to be paid.

The president, in his address to the shareholders, referred to the working of the different mills, and to the various branch establishments at Savannah, Ga., New Orleans, La., Greenwood, Miss., Evart, Mich., Munising, Mich., Romney, Ont., Bismark, Ont., Edey's Mills, Ont., Erie & Huron Mill, Ont., Duluth, Minn., Minneapolis, Minn., Suspension Bridge, N. Y., New York, N. Y., and Liverpool, Eng. The company erected during the year a large mill at Munising, Mich., with an annual producing capacity of over 18,000,000 feet of lumber and 29,000,000 pieces of hoops and staves, and purchased 24,600 acres in Alger county, North Michigan, and 28,800 acres of standing timber in Alger and Delta counties, and now owns 53,-

Mr. J. S. Sutherland,
President of the Sutherland, Innes Company, Limited.

480 acres of timber land and stumpage. The mills have been in operation since May, 1896, giving employment to over 300 men. In the vicinity of their mill at Munising it is estimated that the company control 300,000,000 feet of stumpage, an amount sufficient for twenty years' supply. The president stated that they had purchased three mills in Canada, namely, Alvinston, Southwold and Homesdale mills, on the Courtright branch of the Michigan Central Railway. These have been stocked up with timber for the season's cutting. With the previous mills owned and operated by the company, they now have a capacity of over 125,000,000 pieces of cooperage stock per year, in addition to their lumber business. The improved condition of the the trade in the United States and in foreign countries was a source of congratulation. Reference was made to the trade with France, Spain, Italy, Germany, Holland, Sweden, Denmark and Australia, and it was shown that the contracts already made by the company for 1897 business amounts to over $1,200,000, which is an increase of about 35 per cent. over the business done on contracts at this time for 1896, and that the company was offered very large contracts that were declined, and that the prices of stock have steadily advanced from the fall of 1896.

The new business done by the company for delivery over this year has been done at largely advanced prices, and unless unforeseen contingencies arise the net profits of the company for 1897 should not be less than $100,000. The fairly good winter in Canada has enabled the company to put in a good stock of logs at all of the mills, so that a steady and continuous run throughout the year is assured.

Mr. Sutherland, who had recently visited the south, pointed out the large increase in the white oak stave department of the company's business and also in the southern exports of lumber. He thought that the stagnant condition of trade which followed the panic of 1893 was pretty well spent, and that a revival in business in all the leading branches was an assured fact.

The following appointments of foreign agents were made by the company :

Stahl & Zoon, Rotterdam, Holland.
Leon George, Bordeaux, France.
New York, W. P. Toung and G. W. Gallie.
New Orleans, La., W. A. Powell and Chas. A. Adams.
Savannah, Ga., Messrs. McAlpine & Schley.
Suspension Bridge, N. Y., C. H. Moore.
Munising, Mich., S. M. Smith, W. F. Stewart, C. E. Phillips, J. D. Staples.
Evart, Mich., C. E. Fenton and M. Petit.
Romney, Ont., Geo. Patterson.
Bismark, Ont., W. S. Beach.
Holmesdale, Ont., I. B. Webster.
Alvinston, Ont., W. H. Pray.
Southwold, Ont., W. Pray, jr.
Edy's Mills, Ont., Gus. Wagner.
Minneapolis, Minn., W. B. Judd.
Duluth, Minn., H. Hurdon.
Liverpool, Eng., Jas. Innes, sr.
Travellers, W. C. West, C. H. Moore and C. E. Fenton.
Auditors, A. F. Falls, and W. M. Fleming.
Office manager, W. L. Tackaberry.

Notwithstanding the very large number of agents and superintendents employed, not one change was found necessary during 1896, a fact which is very encouraging to the management.

## PERSONAL.

The death is announced of Mrs. Eastman, wife of Mr. E. P. Eastman, manager of an extensive saw mill at Pollett River, N. B.

Mr. E. H. Lemay, of Montreal, was present at the recent annual meeting of the National Wholesale Lumber Dealers' Association held in New York city.

Hon. G. A. Nantel, Commissioner of Crown Lands for Quebec, has gone to Ashville, North Carolina, where they will spend several weeks, Mr. Nantel's health being in an unsatisfactory condition.

From Timber, of London, Eng., we learn that Mr. John B. Calder, son of Mr. W. R. Calder, of Allison, Cousland & Co., timber brokers, Glasgow, has entered the service of Messrs. McArthur & Grafton, Quebec.

Hon. E. H. Bronson, M. P. P., of Ottawa, has lately been passing through a severe illness, but is now on the road to recovery. The primary cause of his illness is prolonged overexertion, and Mr. Bronson will take a rest from business for a time.

Early in March Mr. E. C. Grant, of the Ottawa Lumber Co., returned from attending the meeting of the National Wholesale Lumber Dealers' Association at New York, where he had the honor of being elected one of the trustees for the term of three years. This is the first time that a Canadian has been elected on the board of management, which is composed of fifteen members. Last year Mr. Grant was placed on the Committee of Admissions and Membership, and this year was given this additional distinction.

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## THE TEMISCAMINGUE DISTRICT.

To the Editor of the CANADA LUMBERMAN:

SIR,—In view of the present and prospective improvements in the facilities of transport from the Temiscamingue district, it would not be amiss to review the lumbering possibilities and prospects of that region. Though hundreds of thousands of saw logs are annually brought from there down the Ottawa river to the mills at Hull, still there seems to be no apparent signs of the output lessening. A quarter of a century ago it was generally considered that in less than twenty years the pine of this region would practically become exhausted, and yet today one could not buy the very limits which were even then considered nearly denuded for the same figure at which they were freely offered then, nor in many cases for even double the amount. The principal operations have so far been confined to the province of Quebec. On the Ontario side licenses have only been issued for just those limits that fringe the shores of the Ottawa river to the extent of about ten to fifteen miles back. Beyond that, south, west and north, and tending south and west nearly to the C. P. R., and north to James' Bay, there still remains a virgin forest. The finest pineries now standing in Canada are contained within these limits, and though beyond the height of land the pine becomes scarce, all up the valley of the Montreal river, and west of it, there is no scarcity; and judging by what has taken place in Quebec, this generation--nor the next—need have no anxiety lest the supply should fail in their time.

Since the opening up of the north-western shores of Lake Temiscamingue for settlement, considerable attention has been called to other classes of wood growing here. Of hardwood, such as beech, maple, black birch and white ash, there is comparatively none. A little oak, of excellent quality, grows on the deltas of the streams that traverse the clay flats, but there is not sufficient to supply the local demand even. In the lower townships, such as Lorain, Burke, Dymond and Harris, and, in fact, in all the country back of and adjacent to Haileybury, there is an extraordinary growth of cedar, reaching in some cases up to thirty-six inches across the stump, and wonderfully sound. Poplar also grows to an extraordinary size, and in immense quantities.

If only some good market could be found for this wood and the means of transport still further improved, the manufacture of it should grow into an important industry. Spruce is very plentiful, but will hardly bear the expenses of shipment. Pulp wood is the feature of these immense clay flats now being thrown open for settlement, and it would not be considered unwise to predict an early development of this industry. Owing to the short distances that the wood in its raw state would have to be carried, it should be possible to manufacture pulp on Temiscamingue at a figure that could compete with any other mills, and more than counterbalance the slightly increased freight upon the manufactured article.

Yours truly,

"A READER."

## DIFFERENT RESULTS IN SCALING LOGS.

To the Editor of the CANADA LUMBERMAN:

SIR,—Kindly allow me space in your valuable paper to refer to the culling and measurement of saw logs, which is of vital importance to all parties interested in lumbering. The Department of Crown Lands organized a system of examination of cullers, and all parties who passed such examination, before procuring a license entitling them to measure logs for a return to the Department, were required to subscribe to an affidavit to measure honestly and fairly and to the best of their judgment, all logs they were called upon to measure. Again, the culler, before completing his returns to the Department, is obliged to swear to the correctness of his returns in every particular, therefore he is doubly sworn to do justice to the Department, as well as to his employer. No defined rule, however, was laid down in such examination as to what allowance was to be made for rots, shakes and other defects, but is left entirely to the judgment and knowledge of the scaler; therefore lumbermen in selecting their cullers endeavor to secure the services of experienced men, who have had a practical knowledge of not only the woods, but of the saw mill where the logs are sawn into lumber, for the saw reveals all defects and gives to the culler a knowledge of how defects of all kinds affect logs.

We believe as a rule we have honorable, upright men on the staff of cullers, who respect their oath and will do justice according to the best of their judgment. We must admit, however, that some licenses have been issued to men who have not had that practical knowledge they should have to qualify them as scalers, therefore every applicant for a license should be able to satisfy the examiners that he has worked at least two years in the woods and one season in a saw mill before he should be allowed to compete for examination, so as to raise the standard of cullers to as high a state of proficiency as possible, which would have a tendency to dispel the feeling of distrust that has been aroused in the districts of Muskoka and Parry Sound during the last two years, which would appear as if all lumbermen were dishonest robbers. As lumbering is one of the chief industries and sources of revenue of this province, it necessarily follows that a great many persons are engaged in the business, and we believe that those so engaged are honorable and upright men, and should be treated as such until it is proven to the contrary.

The following test of a quantity of logs, which can be verified, will show the difference of opinion in the judgment of three different licensed scalers, and will also show the necessity of the Crown Lands Department adopting some uniform system, which will not only protect the Department, but will also give protection to the lumbermen against loss as well. We purchased last season 18,878 logs from another firm, not with a view of manufacturing, but for the purpose of reselling them at a profit. The logs were first measured on the skidds by a licensed culler and resold on the same measurement at a profit of $2,000, less cost of culling and management. After the logs were hauled to the lake, the wood-ranger in charge of these districts came to inspect and make a sample measurement of the logs, to see that justice was done the Department, as the result of which it was reported that the logs were undermeasured at least 50%. Consequently we were notified that a re-scale would be required. On the opening of navigation two scalers were sent by order of the Department to make the measurement, which occupied twenty-one days, this delay preventing the delivery of the logs in time, and consequently the sale was cancelled. We then determined to have the logs sawn without mixing with other logs, as a test as to which scale was correct. They were taken to a band saw mill and again measured over the jack ladder of the mill by an independent licensed culler, and the following is a statement of the four different measurements, together with the actual output of the logs into lumber:

| | Total. | Av. per Log. |
|---|---|---|
| Logs measured on the skidds by licensed scaler | 1,200,810 ft. | 63′ 60″ |
| Logs measured in the water by Government scalers | 1,529,215 ft. | 81′ |
| Logs measured over jack ladder of mill by licensed scaler | 960,099 ft. | 50′ 85″ |
| Sample measurement made by Government wood rangers, with logs on ice, 50% over bush scale, or say | 1,801,215 ft. | 96′ |
| Lumber measured over the trimmers at the mill by an independent inspector. | Com. and Better 1,161,210 ft. | |
| | Mill Culls 398,800 | |
| | Total 1,560,010 ft. | |

At first sight it would appear that the re-scale made in the water was a very close scale to the actual output of the logs, mill culls included; but when it is considered that when Doyle's rule—which is the rule adopted by the Department—was compiled, four inches was allowed for slabs and one quarter was allowed for saw kerf, and as small logs of the size of the above do not require more than two inches for slab, and with the improved and up-to-date band saws there is a saving in saw-kerf alone of one board in ten, and with the lighter slab, there should be at least 20% of an overrun if the logs were measured honestly according to the Doyle rule. Had the logs been made up according to Scribner's rule, they would have contained 1,812,385 ft., or an actual loss to the purchaser of 252,375 ft., mill culls included, as Scribner's rule is made up according to diagrams and is supposed to give the actual contents and allow 15 ft. per log more than Doyle's rule, on logs averaging 100 ft. per log.

We would be pleased to have the opinion of other lumbermen who have made a practical test as to which of these measurements would be considered a fair, honest scale of logs cut on a band saw.

We well know that the Crown Lands Department neither asks for or expects anything but what is fair and just, and that is all that can be expected by any honest lumberman. We also acknowledge that many of the wood-rangers employed by the Department are thoroughly competent men, who would not only do justice to the Department but to the lumbermen as well, and care should be taken by the Department that only well-tried and competent men be selected to fill the position of wood-rangers who would decide fairly between the Department and the lumbermen, giving justice to both, as a re-scale of a quantity of logs invariably entails not only loss to the lumberman, who is obliged to supply men to handle the logs, but also a loss to the Department, which has no doubt been verified during the past year.

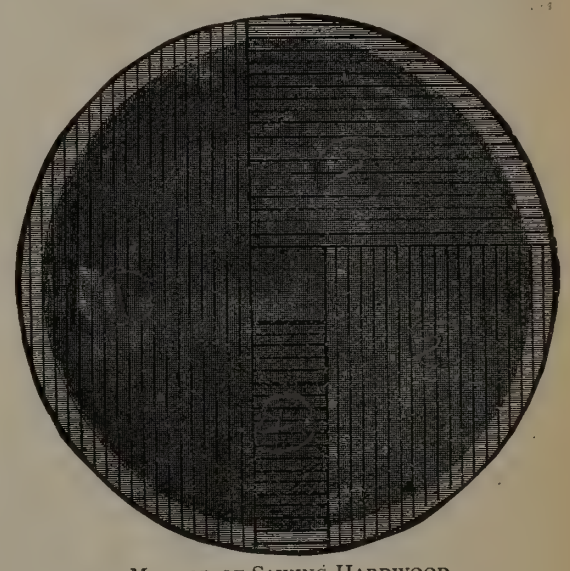
As to the sample measurement made by the wood-ranger in this case, which was 50% over bush scale, we must infer that either the ranger does not understand his business or that he wilfully overmeasured the logs with a view of building up a reputation for himself as a zealous officer—at our expense. We also think it would be in the interest of both the Department and the lumbermen as well to cancel all assistants' papers, and only employ licensed scalers to assist, who would, in our opinion, give better results. Pardon me for taking up so much space of your valuable paper. One of the unfortunate

LUMBERMEN.

## METHOD OF SAWING HARDWOOD.

A WRITER in the Chicago Timberman gives the following description and illustration of what he considers the most approved method for the sawing of hardwood, as practiced in Michigan:

From observation, and from consultation on the subject with some of the most capable men in the trade, I find the consensus of opinion to be that the best side of the log should be turned to the saw and worked down until the heart defects begin to manifest themselves. The log



METHOD OF SAWING HARDWOOD.

should then be turned, sawn surface down, and the operation repeated. The log then being given a quarter turn, and sawed to leave a cant of 6¼ inches full, is then reduced to strips that will season full six inches. This leaves the heart to be thrown away if worthless, without the expenditure of any labor upon it, or it is in shape to go into strips. This method of sawing gives good average widths of stock, and produces a larger proportion of firsts and seconds than any other. The accompanying diagram will more explicitly illustrate the method outlined.

Between 20,000,000 and 30,000,000 feet of lumber were imported by China during 1896, of which 14,000,000 feet were shipped from the United States.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## ONTARIO CROWN LANDS.

THE total receipts from the Crown lands of Ontario during 1896, as shown by the annual report of the Department, was $925,262.93. Of this amount the sum of $812,421.78 was derived from woods and forests, made up as follows: Timber dues, $712,443.87; ground rent, $54,457.91; bonuses, $45,520. The output of saw logs in the winter of 1895-96 is shown to be the largest in the history of the province, the quantity of pine logs alone reaching 904,379,710 feet B. M., against 800,565,355 feet the previous season. The operations in square white pine were also conducted on a more extensive scale, the figures being 1,128,666 cubic feet last year and 873,304 cubic feet in 1894-95. Pulp wood shows a gain of 4,000 cords, nearly all of which was taken out in the Western timber district. The cost of fire ranging was $31,396.90. Three serious fires occurred during the year, one in the vicinity of Lake Wahnapitae, where three or four million feet of timber were damaged, and two in the neighborhood of Biscotasing. The damage at these two latter fires was first estimated at 61,000,000 feet, but the quantity was afterwards found to be much less. Reference is made to the improved condition of the European markets, and the opinion is expressed that Canada will shortly become independent of the United States so far as the disposal of her forest products is concerned.

## GRADING LUMBER.

MORE forcibly each day is the fact impressed upon us that the lumber trade of Canada, and especially of Ontario, is suffering from the lack of uniform inspection rules. In the absence of such rules, each manufacturer and dealer is allowed to make his own inspection, with the result that he frequently suffers loss in the classification of his stock, and buyers scarcely know what to expect when ordering a certain grade. The rules as adopted by the lumber section of the Toronto Board of Trade may be good so far as they go, but they are not explicit enough, while the lumber section of this board may now be said to be a thing of the past.

There appears to be no definite understanding among the trade as to what constitutes the different grades, and quite frequently we are asked for information on the subject. In the case of a legal dispute with a customer in New York, where licensed inspectors are employed, the Canadian dealer is placed at a decided disadvantage. In reply to the question of the court, the latter is obliged to admit that the lumber was graded by an inspector engaged by him for the purpose, who is unable to show any proof of his qualifications, while the person who made the inspection in the New York market produces certificates showing him to be a properly qualified inspector. The effect of this upon the decision is evident.

By the proper grading of stock the manufacturer also would realize greater returns. With a little care and a better understanding as to what constitutes the various grades fewer disputes would arise, and the relations between buyer and seller would become more friendly.

The attention given to the question of grading by United States lumbermen is worthy of notice. One of the most active associations in this direction is the Mississippi Valley Lumbermen's Association, which has established a Bureau of Uniform Grades. Licensed inspectors are employed by the Association to inspect all lumber, and a charge of one cent per thousand feet is made, which is sufficient to defray all expenses in connection with the work. Printed inspection rules are furnished to all members of the association.

## PROTECTION FOR LUMBERMEN.

THE communication printed elsewhere in this number referring to the system of licensing cullers in vogue throughout Ontario, as adopted by the Department of Crown Lands, is worthy of the careful perusal of every lumberman. The statements contained therein clearly show that lumbermen are sometimes subject to much inconvenience as well as financial loss as the result of inaccurate measurements by cullers, while the government must at times stand to lose a considerable sum in timber dues. In the case reported by our correspondent, the time occupied in making a re-scale to ascertain the correct measurement prevented the delivery of the logs to the purchaser at the specified time, and consequently the sale was cancelled.

From the different estimates arrived at by the licensed cullers, we must conclude that the system presents opportunities for a diversity of opinion which should, as far as possible, be eliminated. As each culler is sworn to make proper returns, it would seem that the different results arrived at are largely accounted for by the allowance made for defects, and if this should prove to be the case we feel satisfied that the Department of Crown Lands will make every possible effort to remedy the matter as far as possible when convinced of the necessity of so doing.

In this connection we desire to emphasize the necessity of united effort on the part of lumbermen in order to obtain any needed reforms. Where in the United States there are associations representing every branch of the trade, the lumbermen of Canada have scarcely an association worthy of the name, if we except the Western Retail Lumbermen's Association of Manitoba. The timber lands in Canada being largely under control of the provincial governments, it might not be expedient to organize a Dominion association. Probably an association in each province would be the most feasible.

Organizations in every branch of industry have in the past met with strong opposition by those who believed their existence to be solely for the purpose of advancing prices to an exorbitant figure. This, to our mind, is not the object of the most successful associations. While the question of maintaining prices on a proper basis may justly receive some consideration, there are many other questions of general interest, such as the one referred to above, which would come more directly within the scope of an association, and which would require united effort to attain results. We trust that ere long the lumbermen of Canada will realize the necessity of banding themselves together to consider matters of general interest to the trade. Circumstances point to the desirability of taking the initiatory steps in this direction at once.

## EDITORIAL NOTES.

A BILL has been passed in the United States Senate, and now awaits the signature of the president, making it a misdemeanor to wilfully or maliciously set fire to any timber, underbrush or grass, or to negligently leave any fire burning near timber on public lands. The punishment for infraction of the law is two years' imprisonment or $5,000 fine, or both, and all federal courts are given jurisdiction.

THE courts of British Columbia will shortly decide the question of the ownership of timber upon mineral claims. Several parties have been selling merchantable timber from mineral lands wherever it could be obtained, and the fear is expressed that the claims will be denuded of wood before the timber is required for mining purposes. Hon. Col. Baker, Minister of Mines, having been appealed to, has given his reply that the matter will have to be decided by the courts.

THE development of the mines of Canada has created quite a local demand for lumber in the vicinity of their operations. In British Columbia, particularly in the vicinity of Rossland, the local mills are unable to supply the lumber in sufficient quantities to meet the requirements for building purposes. In the construction of stamp

mills considerable timber of good quality is utilized. The Lumberman recently received from an eastern firm a specification for timber for stamp mill frames, with the accompanying request that we place the same in the hands of manufacturers in British Columbia, Michigan or the Southern States, asking them to quote prices on the stock required. There is evidently an opening for trade in the supply of timber for mining purposes, and Canadian manufacturers should not permit the orders to be placed in a foreign country. An announcement in the Canada Lumberman will keep your name before probable customers.

If we can judge by the sentiments expressed in the lumber journals of Great Britain, manufacturers on this side of the border have not yet reached perfection in the manufacture of their lumber. In a recent issue of Timber, of London, Eng., the following remarks are made with respect to spruce deals: "We have previously pointed out the deteriorating influences of uneven sawing, excess of wane, discoloration by sand or mud, together with a wet, unsightly appearance when landed on this side. To these serious defects must now be added a still greater defect. Many cargees that came to hand during the second half of last year contained an enormous proportion of bastard deals other than spruce, of such density and inferior quality as to be utterly useless for ordinary case-making purposes, for which the bulk of this import is required. Unless greater attention therefore be paid by makers and shippers to this last evil during the coming season these useful goods will certainly lose the distinctive character they have hitherto enjoyed, as being a reliable article, though of short average length, at a reasonable price, for the cheaper wants of the trade."

The management of the crown lands of New Brunswick was the subject of discussion in the local legislature recently. Mr. Pinder, member for York, took the position that as only 77,000,000 feet of pine and spruce was reported to be cut on crown lands, while the total export was 400,000,000 feet, it was fair to assume that stumpage dues had not been collected on a very large amount of lumber cut. He claimed that the crown lands were not properly looked after. This statement was resented by the Surveyor-General and the member for Gloucester, Mr. Sivewright. The latter remarked that the inference might be drawn that the scalers were negligent or corrupt in the performance of their duty. So far as his knowledge went, he believed the scalers to be capable, reliable men, and the charge that they would perjure themselves was without any foundation whatever. If the scalers had performed their duties faithfully, then it might be concluded that the government were conniving in some way at the operations of some of the lumber kings. He claimed that, on the other hand, owing to the many recent surveys, the returns were more accurate than formerly. In his opinion the policy of the government with reference to the 25 years' leases had greatly advanced the ineresrts of the province. If a lumberman wished to raise money he could go to the bank and pledge his lease as collateral, thus placing the small lumberman in a position to compete with the large operator. Mr. Sivewright showed the actual export figures to be 386,000,000 feet, which was made up as follows: Crown lands, 77,000,000; St. John mills, 100,000,000 feet; New Brunswick Land Company, 55,000,000 feet; Mr. Gibson's cut, largely on private lands, 35,000,000 feet. Then there were 40,000,000 feet cut in Albert county, and 20,000,000 at Bay Verte. The balance was made up in various quantities cut upon the lands of the Nova Scotia Land Company and on the Bay Shore.

## LUMBER NOTES FROM NOVA SCOTIA.

[Correspondence of the Canada Lumberman.]

The weather during the past month has been very favorable for logging operations in this section of the country, and advantage has been taken by those interested in logging to the utmost extent, which has resulted in somewhat over the average year's cut being made, and at something under the average cost. This, with the advance in the price of deals, tends to make the lumbermen generally in very good humor.

Alfred Dickie, of Stewiacke, had a number of portable mills sawing for him all winter, which, with the logs got out for his gang and circular mill at Stewiacke, will make his output in the vicinity of thirty million feet, principally deals, which will be shipped from Halifax. He has nine million feet cut, which are to be driven down the Stewiacke river to his mill, which is alongside the Intercolonial Railway, from which the deals are loaded directly on the cars. Mr. Dickie also manufactures lath and box boards from the refuse and small lumber. Mr. John Gillies, formerly of New Brunswick, is the efficient superintendent of Mr. Dickie's large lumber operations in this section of the province. Rumors of a provincial election are rife, and both the "ins" and the "outs" are so sure of the correctness of the rumor that each have their men in the field, Mr. Dickie being one of the nominees of the "ins." Should he be successful—of which some people have no doubt—the county of Colchester would be well represented and the legislature of Nova Scotia would have another good and successful business man added to its numbers.

Densmore & Co., Stewiacke, have a very nice business—saw mill and box making. They have given their mill a thorough overhauling during the past month, and have added a modern and complete dry house, equipped with the McEachren Heating & Ventilating Co.'s heater, fan and condenser combined, made at Galt, Ontario.

Logan & Sutherland, Stewiacke, merchants, etc., have two portable saw mills in operation, cutting in the vicinity of two million feet of deals.

Lantz & Co., Milford, will cut about one million feet, some deals, but they saw principally for the building trade, supplying Halifax builders with dimension timber and lumber.

R. C. Ervin, Shubenacadie, has several portable mills, and saws from seven to ten million feet yearly, principally deals. He has also installed an electric light plant in the town, in connection with which he has a roller flour mill for custom trade, and has in view the project of extending the electric system to the neighboring town of Stewiacke, about six miles, all of which go to show that a successful lumberman is not afraid to launch out in other enterprises.

R. Richardson & Son, Bedford, have a very finely equipped saw mill, box, stave, heading, re-sawing, hardwood flooring, sheathing, planing, and a lot of other things too numerous to mention. The Messrs. Richardson have been unfortunate, having their mills burned several times. When they rebuilt the last time it was with the idea of making the mill as nearly fire-proof as possible. The boiler house is a brick building separate from the mill, into which all the dust and shavings are carried by conveyors. The mill building is completely encased with iron, so that it would seem impossible for a fire to get any headway. Their manufactures go principally to the West Indies.

Young Bros. & Co., Ltd., St. Margaret's Bay, formerly of Parrsboro and River Herbert, are getting out eight million feet, principally spruce, to saw into deals. They have some hemlock coming in, which they took the bark off during last summer, to saw for American markets.

The Gold River Lumber Co., Gold River, are getting out from two and one-half to three million feet of spruce. They will saw for the South American market principally.

The E. D. Davison Co., Ltd., Bridgewater, are the most extensive lumber operators on the Atlantic coast of Nova Scotia. They will get out from 12 to 15 million feet of spruce and pine.

R. Dawson & Sons will get out a couple of million feet of spruce and pine, along the Central railroad and New Germany.

Edward Zwicker & Son, New Germany, do a large business in hardwood and spruce staves, heading, etc.

The Morgan Falls Pulp Co., New Germany, are running day and night, turning out about twenty-five to thirty tons of ground pulp.

J. & J. Coop, of Milton, will get out about one million feet of logs, which they will manufacture at their steam mill at Brooklyn.

Harlow & Kempton, of Milton, are getting out four million feet of logs. They made repairs and improvements to their mill last season, and during the winter have put a complete outfit in their factory for making sashes, doors and house finishing woodwork.

William Ford, Milton, has taken out the gang and put in a rotary in his mill.

John Millard will run his mills at Milton during the season. He has a planing mill, with sash and door factory, at Liverpool, which has been kept busy getting out stock for new buildings being erected in the vicinity. The new hotel, rebuilt on the site of the burned "Trilby," is a credit to the energy and enterprise of Mr. Millard. On visiting Liverpool the traveller, of course, will stop at the "Thorndike," and "Mine Host" Schultz will treat him white.

Allen & Henry L. Tupper, Milton, saw for the West India market, and will manufacture the ordinary quantity.

Ira P. Freeman will saw for the West Indies, John G. Morton for the American market.

Eldred Minard, Milton, will saw about a half million feet of boards for the West India market.

T. G. Nicol, Port Joli, will get out about one million feet, half of which is sawn by the Sable River Mill Company with a portable mill. The remainder will be sawn in a new water power mill just being completed, in which there will be planers, clapboard and shingle machines, etc.

F. G. Nicol, Granite Village, is getting out half a million feet of pine and spruce, to be sawn for the West India markets.

H. W. Freeman, Jordan River, will manufacture three and a half to four million feet. The spruce will be cut into deals for Great Britain, and the pine for the West Indian and South American markets.

James R. Bower, Shelburne, saws ship plank and timber for vessels and houses, shingles, staves, heading, laths, etc.

George W. Durfee, Shelburne, has a nice business in staves and heading, besides carrying on a ship's block and pump business.

Bower Bros., Shelburne, are securing about 750,000 ft. of logs, which will be sawn for the West India and South American markets. They also supply a lot of oak lumber to car builders and furniture factories.

J. A. & J. H. McKay, Clyde River, saw about a half million feet of pine and spruce, besides some oak.

Dickie & McGrath, Tusket River, purchased the mill and timber lands from the Tusket River Lumber Company last season, and have operated extensively during the winter. They have in the vicinity of five million feet of logs in the streams, and are looking forward to a good season's cut. They are making extensive alterations and improvements in the mill, which is steam power, and consists of a steam feed rotary, edger, trimmers, live rolls for handling the sawn lumber, lath, box and shingle machines, planer, etc. Their shipping facilities are unexcelled, the lumber going on the wharf, then loaded into vessels for any port desired. They also run a large general store. Mr. Alfred Dickie, of Stewiacke, is a member of the firm, and Mr. McGrath was formerly superintendent of the Stewiacke business. His record there assures success here.

Blackadars & Co., Methegan and Hectanooga, are getting out three million feet, to be sawn into South American specifications and shipped from Yarmouth.

G. D. Campbell, of Weymouth, will saw about two million feet for the American and South American markets.

The Messrs. Stehlin, New France, will saw about three million feet in their new mill. This lumber will be taken to shipping point at Weymouth, on a pole railroad they are building, about twelve miles long. Mr. Stehlin, sr., came here from France about three years ago and brought a family of stalwart sons and fair daughters to found a colony and make a home in this new country, and the name under which the colony goes, New France, indicates a warm feeling for the home he has left and the hopes he has in making the new home equal the old.

R. W. Hardwick, Annapolis, has moved his saw mill and sash and door factory to a new site, where he will have a better water front to hold logs. He is doing a lot of building under contract and reports business good.

The R. W. Kinsman Co., Ltd., successors to F. W. Borden Co. at Canning, will get about three quarters of a million feet of lumber to be sawn into deals. They then intend removing their mill to a place near the water, and on lower ground, so that the haul will be down grade. They have some good timber on Blomidon.

S. P. Benjamin, Wolfville, will saw in his two mills about seven or eight million feet of deals. He is just putting the finishing touches on a new band mill, put in by the Waterous Engine Works Co., of Brantford, from which he expects good results. The lumber from the band mill will be run down a sluice about six or seven miles, then put on scows and taken to the ship's side.

T. G. McMullen & Co., Truro, is said to be the largest handler of lumber in Nova Scotia. This year they will have about fifty million feet for shipment, about eight millions of which will be sawn in a band mill at Ellerhause, all to be shipped from Halifax.

W. J. P.

## FORESTRY IN ONTARIO.*

By Thomas Southworth.

Practical scientific forestry has no existence in Ontario —a land of forests. We have no trained foresters, and, so far as I know, there has been no attempt made to apply the principles of correct forestry practice in this country. As a rule when we use the term we are apt to refer only to that incidental phase of the science which relates to the influence of forests on climate and soil and water supply, as well as the loss, from an æsthetic point of view, resulting from the removal of trees from the landscape. These are but minor factors in the science of forestry proper, important in themselves, but not constituting the chief aim of its exponents.

Forestry is a business just as farming is a business. It is the art of growing and harvesting crops of the most valuable sorts of trees in the cheapest and quickest manner, but having regard at the same time to certain incidental effects of masses of woodland vegetation on soil, on climate and on water supply, and consequently on the health and prosperity of the community. The pioneer settlers of Ontario were confronted with a vast tree-covered wilderness, the extent of which was unbroken except by the labors of the industrious and ingenious beaver. Aside from these few and small "beaver meadows," each pioneer, in order to build a home, had to begin his battle with the forest, and soon the sound of the white man's axe and the smoke of his wasteful but necessary log heaps were apparent along the frontier from the Ottawa to Lake Ontario. After a time of struggle and hardship, when communication had been opened with the sea by way of the St. Lawrence, a market was found in Britain for some of our giant pine trees. From this time the lumberman reinforced the farmer in the onslaught upon the trees, and much of the reckless waste of the burning log heaps was avoided. When we consider the conditions surrounding the early settlement of this country, we need not be surprised that the pioneer came to regard a tree as his enemy. Nor is it very much to be wondered at that the man of that day, whose horizon was limited by the solid wall of trees surrounding his cabin, could not be brought to believe that there would ever come a time when he would have to use coal for fuel or send beyond our own immediate neighborhood for timber for barns or houses. Yet that time has arrived, and it has taken but a short time to bring this state of affairs about in many parts of Ontario.

The history of settlement and of lumbering in Ontario has been similar to that of other wooded countries. In every case the forest has had a battle against odds. The tree is the king of the vegetable world, as man is the undisputed monarch of the animal kingdom. They have both struggled for existence in their upward march, and when they meet in combat who can doubt the result of the issue between these two "survivals of the fittest." In the first place, the forest has had to battle with a reluctant and sterile soil created for it, in great part, by lower forms of vegetable life. The algae, lichens, grasses that cultivate the rock and gravel, taking most of their nourishment from the air, live out their brief existence, die and decay, thus adding to the scanty soil, which is still further augmented by the action of the rocks, of the gases generated in their dissoluion. These vegetable pioneers create and fit the soil for the occupation of the forest monarchs and trees "go in and possess the land."

When man appears on the scene he takes issue with the trees and the conflict is begun again. Wheat cannot grow in the forest, nor will the latter produce sustenance for large numbers of human kind. Ground must be cleared for crops of grain and for pasture, so the battle must go on and man must win. It involves much and continuous effort, though the victor must not relax his vigilance. The forest is most persistent, and upon any cessation of man's fight with axe and fire and plow will re-occupy the abandoned position and is soon in full possession, as the abandoned farms of New England testify. Man's warfare with the forest is so severe that he is apt not to be satisfied with mere conquest, but proceeds to extermination, realizing, when too late, that it would have been wiser to convert the erstwhile foe into an ally, making the conquered forest a protector from other enemies and a contributor to his welfare and comfort. When the discovery is made, when only a remnant of the vigorous foe is left, man proceeds to expend much treasnre and labor to encourage the presence of a tribe no longer regarded as an enemy, but valued as a friend. This has been the history in the old world and history is repeating itself in the new. In the Republic to the south of us the evils that follow in the train of denudation of forest lands are already seriously felt in many places. Michigan, Minnesota, Pennsylvania, once great pine states, are so no longer. The mills of Michigan are now supplied from Ontario forests. Vast sums of money are being expended in various states in restoring from individual hands to state control large areas of land that are the sources of streams, in an attempt to preserve the water powers so essential for industrial improvement.

In Ontario, however, our smaller population and the great extent of our forest resources have tended to postpone the evils of forest destruction. The factors that have so far caused our safety in this regard make all the more difficult the task of bringing our people to realize the gravity of our present position, and the necessity of taking steps now to prevent the disastrous effects that have everywhere resulted from the reckless extermination of the forests, and that will inevitably follow the same course here. "Experience teaches," but it would seem that experience must needs be personal to have the desired effect. The history of forest destruction in France, Germany, Switzerland and other European countries, followed by expensive attempts at reforestation when the disasters cansed by the destruction became painfully apparent, is well known to all students of forestry or of history. Yet this history failed to teach the people of the American republic that there was danger in the indiscriminate and reckless waste of their forest wealth. They know it now, but it took a personal experience to instill the lesson, which has been a very expensive one. It is stated that the State of New York will appropriate one million dollars this year to add to their forest area in the Adirondacks. Other states, notably Minnesota, Pennsylvania and Wisconsin, are moving in the same direction.

In Ontario there are two problems for the forester to solve—problems quite diverse in their character and requiring radically different treatment. The first and most important is a forestry problem pure and simple, and refers to the management of the forest lands of the Crown. The other is incidentally a part of the forester's work, and refers to the necessity of replanting or reforesting on lands held by individuals, lands that have been too closely stripped of their timber, with the resultant ill effects on climate and water supply. Despite the fact that this is a young country, only a fringe of which is at all well settled, we have arrived at the stage early in our history when this latter problem confronts us, a question by no means easy of solution. A great many people are disposed to regard as cranks and alarmists those who make the statement that we in the settled part of Ontario have passed the danger line and cut away our forests beyond the safe proportion of wooded to cleared land. They drive through the country and see in the distance what appear to be extensive woods, and conclude we have more trees than are necessary for fuel or timber or for climatic protection. They fail to notice how these supposedly extensive forests degenerate into non-productive and valueless copses of stunted and shrub bushes as we approach them. Their attention is then directed to other extensive forests still in the distance. I must confess to have been at one time numbered among those who thought the people who cried danger were disturbing themselves needlessly. My personal observations had been largely confined to a county which, though an old one, is still fairly well wooded, and I found it hard to believe so small a percentage of woodland existed anywhere in Ontario, as I now know to be the case in many counties.

I think it may safely be assumed that in a country such as this, depending upon rainfall for its water supply, and where there are so great demands for wood as fuel and in the arts, the proportion of woodland to the whole area should not be less than 25%. Even in the more densely settled portion, where farming is more intensive than in the newer sections, 20% is little enough for protection and for the local needs of the farming community as fuel and building timber. What makes it all the more imperative that this proportion of wooded to cleared land should be maintained is the fact that that percentage may be said to fairly represent the proportion of the non-cultivatable land, or more strictly speaking, land on which it will pay better in financial returns to grow trees than any other crops.

Of the countries in Europe the proportion under forest is in Russia 40%, Norway and Sweden 34%, Austria 29.1%, Germany 26.1%, Turkey and Roumania 22.2%, Italy 22%, France 17.3%, Greece 14.3%, Spain 7%, Portugal 5.1%. In Great Britain there exists only 4.1%, but in spite of the great value of land there and the humidity of the atmosphere from other causes, the forest area is being increased. In Germany and France, where forestry has reached its greatest perfection, the Governments are increasing the forest areas under their management and exercise a restrictive control to some extent over the forest lands of private owners. Taking this province as a whole the proportion of wooded to cleared land is much greater than in European countries, greater even than Russia, yet in many of our older counties the proportion is very low, despite our comparative youth as a nation.

In trying to arrive at an estimate of the proportion of woodland in settled parts of the province, I had recourse to the returns of the township assessors to the Bureau of Industries. I found, however, that the assessors were somewhat careless in their classification, including in the term woodland a great deal of waste and barren land that was not tree-covered. A circular was issued directing their attention to this matter, and in the next assessment greater efforts were made to accuracy in this regard. From the last assessment returns to the Bureau of Industries I find many of the older counties have less than 25% of woodland, and others would also come under this limit except that, like Hastings and Addington, they extend into the northern regions not yet well settled. From these returns the following table is compiled:

| County. | Per Cent of Woodland. |
|---|---|
| Elgin | 23 |
| Bruce | 20 |
| Grey | 21 |
| Leeds | 19 |
| Dundas | 17 |
| Grenville | 14 |
| Lanark | 21 |
| Kent | 19 |
| Norfolk | 18 |
| Haldimand | 16 |
| Carbeter | 15 |
| Halton | 15 |
| Welland | 12 |
| Oxford | 12 |
| Perth | 11 |
| Dufferin | 10 |
| Lincoln | 13 |
| Waterloo | 13 |
| Northumberland | 12 |
| Durham | 11 |
| Wentworth | 10 |
| Huron | 10 |
| Prince Edward | 9 |
| Wellington | 8 |
| Brant | 8 |
| Peel | 7 |
| York | 7 |
| Victoria | 5 |
| Essex | 14 |
| Lambton | 9 |

If the front group of townships in each be taken into account, in Frontenac, Peterborough, Lennox and Addington, and Hastings, the same condition will be found to exist. This indicates a serious state of affairs. Not only must we call a halt in the work of deforestation, but we need to in some measure repair the injury already done, by increasing our woodland areas. How this is to bs done is a problem not easy to solve. The land question is in the hands of individual and small owners, mostly men engaged in farming. If you can convince the individual farmer that it will pay him financially to grow trees instead of grain or stock, he will very soon proceed to plant trees. You cannot well do this for two very forcible reasons. In the first place, except so far as hilly or otherwise uncultivated land is concerned, it will not pay to grow trees instead of other crops, and in the second place, farmers in this country, where there is no large land-holding class, where we have no old feudal families and estates, look with small favor on the sowing of a crop which they are not likely to live to reap. They lose sight entirely of the value of the crop as an investment, and fail to see that the very presence of this crop, though only partly grown, would greatly increase the selling value of their farms. So far we have raised no crops of trees in Canada or in America to prove the actual profit in the operation, and in the absence of practical demonstration of results, theories cut very little figure with the Ontario farmer. If you point out to him that the absence of trees on his farm deleteriously affects the climate, he naturally thinks his farm is not large enough to have much effect, and besides, the welfare of the general public is no immediate concern of his. It is hard to make him see that the cutting away of the bush around the pond at the head of the creek on his place will injure his neighbors by lessening the flow of water miles away on this creek, and he is not disposed to fret very much over it if he does. I am afraid this matter will not be settled satisfactorily by appealing to the patriotism or the pride or the altruistic sentiments of the individual land-owner. The remedy must be applied by the land-owners, but I have grave doubts of the necessary work of reforestation being accomplished without the aid of some form of governmental encouragement, perhaps not in the way of financial assistance, but at least by governmental interference.

Much may be accomplished in this direction by the cultivation of a public sentiment in favor of tree planting, and the newspaper press of the province is assisting nobly in that work. Various local influences tend to the growth and preservation of trees for commercial purposes, and in some ways this can be fostered. The united counties of Leeds and Grenville, in which the woods were at one time in danger of total extinction to feed the locomotives of the Grand Trunk Railway, are still comparatively well wooded because of the manufacture of maple sugar. Of the 5,665,000 pounds of maple sugar made yearly in Ontario, according to the last census returns, over one-sixth, or 981,147 pounds, were made in those counties, hence there is still 19% of woodland there, largely maple. I am afraid, however, that we cannot cultivate a public sentiment in favor of tree planting fast enough to keep pace with the destruction of our woodlands or to restore soon enough the too much denuded areas. For the general benefit of the community as a whole there must be considerable replanting, even if a direct financial profit to the planter cannot be shown. The farmer is apt to say when urged to plant trees, "I cannot see any profit to me in the operation, and if, as you say, the presence of the trees would benefit the general community, why, the general community should contribute towards the expense of planting." This very factor of the general benefit of forests to the public has in Europe caused governmental interference in the direction of exercising a control over private forests, and the owner

*Paper read before the Canadian Institute, Toronto.

of forest land is not allowed to remove the forest cover entirely if it is likely to be inimical to the general interest. Repugnant as this control would be to the democratic sentiments of the people of this country, it would be no more arbitary legislation than the law by which a man is prevented from polluting a stream passing through his lands which waters the lands of his neighbors.

Various suggestions have been made as to the encouragement of tree planting in our settled areas, and they are for the most part in the form of government assistance, either by remission of taxes on woodlands, by supplying seedling trees at the public expense, or by a cash bonus. Just what form this governmental interference should take is still an open question, but in my opinion such action, coupled with the education of public opinion on the matter, will be found necessary to restore that proportion of wooded to cleared land which experience has taught us to be necessary to national prosperity.

The other and vaster phase of the forestry problem in Ontario requires different treatment, and becomes easier of solution as we learn more of the condition of the country and the habit of growth of our more important commercial timber trees. As remarked before, the forest is very persistent and will perpetuate itself if given a chance. Time and protection of the land from fire would restore in all its primeval glory the magnificent forest growth that once covered this country. In a country where all the land is arable, where grain can be raised profitably, it is difficult to prevent the forest from being removed to make way for crops of grain or grass. Fortunately, I think, this is not the case in Ontario. While we have a very large extent of arable land along the great lakes and the St. Lawrence river, south of the elevated plateau we call the height of land, and north of it, on the slope towards the Hudson Bay, there is a strip of land, generally speaking from east to west across the province, not suited for general agriculture, but well adapted for forests. It is impossible even approximately to estimate the amount of valuable white pine that has been cut and burned off this height of land, and we are still cutting and burning further west on the same ridge. It was eminently right that we should cut this timber as fast as the demands of commerce warranted. The forests were old and much of the timber past its prime. Through the Algonquin Park country the lumbermen now operating there report that much of the pine timber is defective from over age.

Two principal causes have acted against the practice of scientific forestry in this country. In the first place, our wondrous wealth in forests tended to the belief that they were practically inexhaustible, and that careful or provident methods in their exploitation were not necessary. Fortunately for the revenues of the province, however, both in the past and for the future, our legislators had a due regard for the welfare of the province in a financial sense, and these forests were not given away, nor was the land in which they grew placed in the hands of speculators, but held by the Crown for the use of bona fide settlers.

In marked contrast to the policy pursued by the people of the United States, in selling to large lumbering firms or other speculators great areas of timbered land at a merely nominal price per acre, Ontario has sold her timber by auction to the highest bidder, subject to a small stumpage tax when cut, and has held the land for the use of settlers. This policy has not been without its opponents. Men from purely unselfish motives have sometimes urged a different course. As long ago as 1862 the late John Langton, M. A., in a paper read before the Historical Society of Quebec, pointed out the danger of too rapid extinction of our forests. He took the position that with a proper system of administration of the forests a comparatively small area would grow successive crops of timber sufficient for our demands for local use and for export at the then rate of cutting, but that with the wasteful methods then in vogue there was danger that our revenues from that source would soon be exhausted. As a preventative measure Mr. Langton advocated the selling of many blocks of timber land outright to lumbermen, who would be interested in their protection and in the perpetuation of the timber crops. Mr. Langton saw that dividing up the land into small holdings for settlers was likely to produce the results that now are seen in our older countries, but his remedy, in the light of subsequent history in the United States, would not have cured the evil. It has been very fortunate for us that the large areas on which grow our finest forests were not sold to lumbermen, but remained the property of the whole people, leaving us now in a position to grow another forest in place of the one removed, without having to buy back the land to do so. Our timber policy has consisted in realizing as much as possible for the public revenue from the use of the vast timber wealth with which we are endowed. So far it has not included any provision for replacing the crop destroyed, and this has been the case largely because of the other factor I have referred to, which consisted of a very general belief that this could not be done except by an expensive system of sowing or planting.

Our great timber tree of commerce is the white or Weymouth pine, a tree that has no successful rival in any country, and in any scheme of reforestation for commercial purposes this tree must be the main feature of the forest growth. Under our system of lumbering the tops and branches of the trees are left on the ground where the trees are felled. In coniferous forests this refuse is extremely inflammable, and in consequence, when the lumberman has gone through a pinery, fire invariably follows him and sweeps away what he has left—not the refuse only, but the young trees not large enough to cut. If it should happen that this forest fire does not entirely destroy the growing timber, there is apt to be another one to complete the work. This succession of fires after logging operations has come to be looked upon quite as a matter of course, though I venture to express the opinion that the enormous waste of wealth occasioned thereby is not at all necessary, and could be materially checked by some slight change in the method of lumbering and by the expenditure of some money in forest protection, an expenditure that would be a good investment by reason of the increased revenue from the timber lands of the Crown.

However, we must consider the situation as we find it. Forest fires occur, and the cut over pine lands are completely stripped, not only of the young trees that would make the future forest, but the seeds on the ground are destroyed, and occasionally the soil that has been centuries in forming is burned away as well. When any soil is left the pine forest burned away is generally first succeeded by a growth of less valuable trees, such as poplar, birch, fire cherry, etc.. and from this fact has been drawn the conclusion that when once pine forests are cut away we need never hope for other pine forests to take their place unless we replant them. Experienced woodmen have repeatedly given this as their settled conviction, and it has almost come to be regarded as an axiom that nature provides a sort of rotation of crops of trees, by which white pine is succeeded by some other tree and it in turn replaced by others till the circle is complete. As an evidence of this it is alleged that there are trees that will not reproduce till their seeds are subjected to the action of fire. One of these trees is our own Jack or Banksian pine. Concerning this tree a very distinguished authority, in a paper read before one of the sessions of the American Forestry Congress, states :—

"Referring to the evidence afforded by the trees themselves that forest fires are natural phenomena, I shall mention the case of the Banksian pine. The cones of this tree are hard and remain closed as long as the tree lives. The older ones become weathered and covered with lichen, often indicating great age, still adhering firmly to the branch. The tree may fall down and rot and the cones drop from the decayed branches, yet they will not open. But should the tree become scorched by a forest fire, they will immediately gape open, and the healthy seeds will become scattered far and wide by the wind."

If this position be correct, and we cannot reap successive crops of our most valuable timber trees on the same land without artificial sowing or planting, then our hope of successful reforestation of the cut and burned-over areas on the Crown lands must needs be very faint. With all due deference to the views of these experienced men, and in spite of the general concensus of opinion to the contrary, I am convinced that white pine will succeed white pine even after a forest fire if any pine trees capable of bearing seed are left in the vicinity, and even if the new growth is largely deciduous trees it will be found, on close inspection, that there are many young pines among them that will in a short time overtop and subdue the less valuable trees. Even in the case of Jack pine referred to above, some investigations undertaken by Mr. E. C. Jeffrey last summer go to prove conclusively that it will reproduce itself in just the same manner as other trees, and that it does not require the assistance of a forest fire to do so.

All over the province where lumbering operations have been carried on and the land has not been cultivated, young pines in varying numbers may be seen growing thriftily until some tourist or prospector or settler causes it to be burned over. In the original pine region, wherever fire has been kept out for a few years, pine is now growing among the other trees, and there are large areas of unproductive land on which, if properly protected, there will be a valuable forest in twenty-five years from now. Fifty years is a short time in the life of a nation, but in that time we could begin cutting timber in the Ottawa valley again and get from it a greater revenue for the province than was obtained from the original forest. The land is still ours ; it will inevitably be tree-covered if protected, and it will not require a heavy expenditure to protect it. The forest problem in the Crown lands seems to me to require for its solution simply the setting aside of the now tillable areas throughout the height of land or the water shed of the province as permanent timber reserves not open for settlement. Keep out fire and allow the forest to grow till the trees are a merchantable size. When this period is reached these forest areas should be worked on correct forestry principles, and the lumbermen allowed to cut only as directed by the government foresters, and not indiscriminately as at present. The time required to grow this new forest would be less than is commonly supposed. There are now, over large tracts of country suitable for forest reserves and useful for little else, quantities of young pine growing of various ages that, if protected, and more particularly if thinned out, would be suitable for timber in from ten to forty or fifty years. The growth of pine per year has been variously estimated. In any computation it must be remembered that pine is not found growing alone, but always with other trees ; hence when we compute the amount of pine on an acre we should not lose sight of the value of the other trees, many of them of commercial value, such as oak, maple, elm, birch, spruce and others, and this value is increasing yearly.

Sir Henry Joly, referring to some calculations in the last report of the Ontario Bureau of Forestry, states that he has from personal measurements through several years concluded that "It takes about ten years to add two inches to the diameter of a tree. At this rate of growth I find that a white spruce twelve inches in diameter will gain in ten years eight cubic feet, which would give four-fifths of a cubic foot every year, and if you allow 75 spruce trees to the acre it will give you 60 cubic feet for the yearly growth." Continuing, Sir Henry says : "Perhaps there are not many acres on which will be found 75 good sized spruce, but on moderately well timbered land the equivalent in bulk of the timber represented by 75 spruce trees of say, 14 inches at the stump, will be found in other trees, and it can be ascertained by comparing the yearly rings of the white spruce with those of the black walnut, butternut, pine, oak, ash, poplar, elm and some others, that the growth of the white spruce is slower than that of the above mentioned trees, so that I feel justified, like Mr. Southworth, in adopting the United States figures of 59½ cubic feet, the more so that we have the statement of eminent authorities in England who estimate the annual growth of one acre of Scotch pines at 100 to 120 cubic feet, nearly double the rate allowed by Mr. Southworth."

Our present annual cut of timber on the Crown lands of the province aggregates over 60 million feet cubic, and it will require a great many years at this rate of cutting to go over the uncut and unexplored regions of pine land in the Crown domain even with the assistance of occasional fires. Taking the figures of 60 cubic feet as the annual growth yer acre under ordinary forest conditions without culture, it would only require a million acres of land to grow the amount of timber annually cut on the Crown lands, and we have more than that area in Algonquin Park alone. It is impossible at present to more than guess at the extent of the areas that could be set aside as forest preserves without encroaching on our agricultural lands, but it will reach many millions of acres. It is but fair to add that to the amount of timber annually cut on the Crown lands may be added fully as much more cut by settlers. I have not yet the complete figures, but am safe in saying it will be found to be fully that much, and this must be taken into account as well, because the woodlands of the farmers are being depleted to make it up. Throughout these areas of cut-over land that might be utilized for forest preserves there are scattered settlers wherever there is soil fit for agriculture, and in some places where there is none. In any scheme of protection of these young forests the services of these settlers could be used, thus lessening the cost to the country and helping these settlers to make a living.

As to the profits on the investment, we have only to look at the example of Germany to see. Their Crown forests have been cut over again and again, yet their 6,050,445 acres of Crown forests return a net yearly revenue to the state of $8,000,000, and this despite the fact that their forestry system is a semi-military and expensive one and the expenditure includes yearly purchases of land and the maintenance of an expensive system of forest schools.

Aside from the question of provincial revenue derived from our timber we must not lose sight of the fact that the extinction of our forests means the decay of our lumbering interests. It has been customary in many quarters to denounce the ruthless and reckless course of the lumbermen, but they have been a very important element in our industrial development and now represent the largest industry, aside from agriculture, in the province, employing a very large number of men, with a heavy capital investment. Lumbering operations provide a paying market for the produce of the pioneer farmers, many of whom are employed in the woods during the winter. It would be a national calamity if this industry were to die out, and if it does it will be our own fault. Another happy circumstance in connection with the proposed forest preserves lies in the fact that the land most suited for an extensive system of forestry because of its inutility for general agriculture is that section of country where the existence of forest cover is demanded for the protection of our main water courses flowing both north and south.

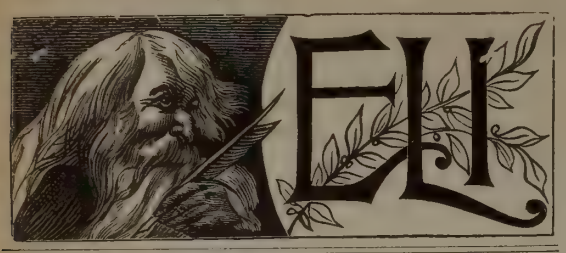
## PUBLICATIONS.

The annual supplementary editions of the Winnipeg Commercial have become a fixture. The number just to hand surpasses all previous issues.

The contrast in the condition of the country between the time of Lincoln's first inauguration and that of President-elect McKinley is said to be vividly portrayed in an article by Stephen Fiske, for the March Ladies' Home Journal.

The twenty-second annual special issue of the Timber Trades Journal, of London, England, is devoted largely to a description of the lumbering industries of Canada, particularly the eastern provinces. For this purpose a director of the journal visited Canada last fall, and the result of his labors is the publication of a volume of information which should be of great interest to importers in foreign countries. The journal is freely illustrated and altogether a creditable number.

One of the most complete publications which has yet come under our notice is a special edition of The Paper Mill and Wood Pulp News, of New York. The many interesting illustrations of mills and prominent persons connected with the paper trade are printed on first-class paper, in such a manner as to produce the best results, and the success with which the publishers have met in their efforts to produce a journal second to none should be gratifying in the extreme. The advertisements as arranged constitute an important feature of the number.



Mr. J. B. McWilliams, crown timber agent, of Peterboro', Ont., returned early in March from an inspection of the lumber camps in Northern Ontario. From Huntsville he drove through a rough section of country, sheltered, however, from cold winds by thick forests and almost insurmountable walls of rock. Passing through the townships of McClintock and Livingstone to the village of Dorset, the former headquarters of the Gilmour Company, Mr. McWilliams proceeded to the headquarters of the superintendent of Algonquin Park at Canoe Lake. He visited during his tour the camps of the Rathbun Co., Gilmour Co., Mickle, Dyment & Son, J. D. Shier and the St. Anthony Lumber Co., and inspected operations amounting to 80,000,000 feet board measure of saw logs, and 530,000 cubic feet of board timber, representing a total revenue to the government of over $110,000. Mr. McWilliams found the largest stick of board timber on the limits of Mr. Dyment. It measured 305 cubic feet. In the St. Anthony Lumber Co.'s limits he found a log 4,069 feet, board measure. The largest average in the size of logs were those of the Gilmour Co., 230 feet being the average. Mr. McWilliams declares the Rathbun Company to have the best camp and the best accommodations for the men. They do the closest cutting and take greater care in preserving their timber.

* * *

How the position of the lumber business in many parts of Canada has changed of late! Where a few years ago the business was chiefly confined to a few large operators, we now have a very large number of small mills, and many farmers who have a few thousand feet of timber to dispose of, put in a portable saw mill and cut the lumber, either for their own use or for market. There are several reasons for this change, among which may be mentioned the perfecting of the portable saw mill, the meagre returns from farming, and the increase in the price of lumber as compared with twenty-five years ago. I was recently given access to some returns showing the number of small mills in Ontario which cut entirely from timber obtained from private lands, and was surprised to find that such mills numbered well up to fifteen hundred. Of course the average annual cut of most of these would probably not be more than a few thousand feet, but it would go a long way towards supplying the local demand from the farming community. In New Brunswick similar conditions exist, and as a result property has materially advanced in price. Lands which at one time were considered almost valueless are now held at a high figure, owing to the general adoption of the portable mill.

* * *

I had a conversation recently with the head of a large manufacturing firm which had become insolvent. His account to me of the business of the firm since its establishment was interesting and suggestive. Starting in business about fifteen years ago with a very limited capital, the combined possessions of the partners in the enterprise, success was at once met with, and year after year showed an increase in the profits of the company. In keeping with the increasing business, it became necessary almost every year to enlarge the plant, and to this end nearly all the profits were devoted, until the almost insignificant establishment of a few years ago became an extensive and modern concern. But during the general business depression of the past two or three years, orders commenced to slacken, a condition the company were ill prepared for, having their funds largely locked up in manufacturing plant. Profits decreased, and it became necessary to mortgage the plant to meet their expenses. No assistance coming in the way of renewed activity, the abandonment of their estate was the only resort. In the above lines there may be a lesson for some one. While enterprise is at all times to be commended, there is danger in branching out to such an extent as to jeopardize one's position when unusual financial or commercial depression is experienced. The shrewd business man is he who makes ample provision for the many ups and downs which are certain to be encountered in business life. Had the firm referred to been content with a smaller plant, and retained some of their capital for an emergency such as subsequently was met with, they would undoubtedly have weathered the storm more successfully. Slow but steady progress is certain to attain the best results.

## QUERY FOR LUMBERMEN.

May & Son, of Weston, Ont., were cutting in their mill an elm log, third from butt of tree, say 30 feet from ground, and the saw ran on to five iron spikes, half inch thick. They were imbedded in about 8 inches, and eighty growths were outside of them. How did they get there?

The Lumberman solicits the opinions of its readers as to the most feasible solution of the problem.

## BRITISH COLUMBIA LETTER.

[Regular Correspondence of the Canada Lumberman.]

The subject of forest preservation has received considerable attention in the local legislature. Mr. Kennedy moved that more efficient means for preventing forest fires be adopted, by some system of patrol by the provincial police during the months of July, August and September. Hon. Mr. Martin suggested that, owing to the large area of timber limits, a steam yacht be employed to cruise along the coast. Mr. Kennedy suggested the establishment of fire districts and the appointment of a warden for each district, such warden to have the power of a police officer and authority to call on the public for assistance in putting out fires. He thought loggers should be required to burn over their cuttings at the close of the cutting season.

Mr. E. J. Palmer, manager of the Victoria Lumber and Manufacturing Company's Chemainus mill, spoke as follows with regard to the lumber trade: "Business is rushing—so much so that we are running night and day, and even then find it hard to keep up with the orders. Oh yes, the lumber trade is looking up at last, I'm glad to say."

According to the report of Timber Inspector Skinner, the timber cut during 1896, not including that from the Dominion and the E. & N. lands, was 112,957,106 feet, of which 61,845,798 feet was from Crown lands, 30,575,180 from timber leaseholds, 13,549,228 from private property, and 6,986,900 from timber limits. The royalty payable was $30,922 in respect of Crown lands, $15,287 timber leaseholds, and $3,493 timber limits, making a total of $47,703. The rebates allowed for exportation were $18,395, leaving the net royalty on timber $31,307. The royalty collected on cordwood was $7,863. The rent accruing on timber leases during 1896 came to $45,733. The total revenue from timber sources was $90,402. The largest payments for royalty were made by the Moodyville Lands and Saw Mill Co., $7,893 less $3,919 rebate; B. C. Mills, Timber & Trading Company, Vancouver and New Westminster, $20,432 less $10,216; Victoria Lumber & Manufacturing Co., Chemainus, $3,874 less $1,937; Geo. Cassady & Co., Ltd., $1,298 less $649; and Louis Blue, Rossland, $1,705.

### COAST CHIPS.

The large mill of the Takush Harbor Lumber Co. has closed down.

A shipment of 80,000 feet of cedar timber and shingle bolts was recently made to Japan as an experimental order.

Mr. J. C. Schermerhorn, formerly of the Sayward Mill Co., of Vancouver, has been appointed manager of Mr. Sayward's mill at Pilot Bay, and assumed his new duties a fortnight ago.

Mr. E. F. Stephenson, Dominion Land and Timber Agent, of Winnipeg, was in this province early in the month investigating the affairs of the Crown Timber Agency here. A commission was held yesterday to inquire into matters, the result of which I have not yet learned. Pending the result, Mr. T. S. Higginson has been suspended.

New Westminster, B. C., March 20, 1897.

## NEW BRUNSWICK LETTER.

[Regular Correspondence of the Canada Lumberman.]

Much interest is taken here by lumbermen in the proposal of the United States government to impose a tax upon Canadian lumber. A number of American firms holding timber limits in Maine have mills on this side of the border, in which they manufacture the logs from their Maine limits. Among those may be mentioned the following: Stetson, Cutler & Co., two mills; Miller & Woodman, two mills; J. R. Warner & Co., S. T. King & Sons, A. Cushing & Co., Dunn Bros., James F. Hamilton, Charles Miller, and E. L. Jewett, all of whose mills are located at St. John. The above firms find it more advantageous to manufacture their logs on the Canadian side, and are therefore opposed to a duty on lumber.

St. John is coming to the front as a winter shipping port. A statement recently prepared shows that when the season is completed 48 vessels will have sailed to British ports and eight to the West Indies, carrying a total of 106,162 tons. The figures for 1895-96 were 76,228 tons. The regular liners have taken a large quantity of lumber in small lots, which has enabled light importers in Great Britain to obtain goods direct.

J. A. Sinclair, brother of Mr. Edward Sinclair, the well-known lumber operator of Miramichi, is manager of one of the largest saw mills in California. He went to the Pacific coast in the early seventies and located in Humboldt County. The town of Scotia, Humboldt Co., was built principally by Mr. Sinclair. An idea of the size of the mill may be obtained from the fact that the outfit was the largest single contract for saw mill machinery ever taken in the United States.

### BITS OF LUMBER.

The annual meeting of the St. John River Log Driving Company is annonnced to take place in this city on the 7th of April.

Charles D. Stanford and F. W. Hall, of Bangor, Me., have decided to erect a large mill on their property at Tracadie next summer.

Messrs. Timothy Lynch, Michael Welsh, David Lynch, James Love, John Reynolds and Peter B. Miller are seeking incorporation as the Upper Southwest Miramichi Log Driving Company.

Leonard & Son's mill at Annidale, Queens Co., is now sawing. Their mill at Armstrong's Corner will be supplied this year with lumber cut on Canaan river and the north-east branch of Long creek. There will be a cut of two and a half millions to supply these mills this year.

St. John, N. B., March 23, 1897.

The McEachren Heating & Ventilating Co., of Galt, Ont., will shortly remove their works to the larger factory premises recently occupied by the Cant Bros. Co. The company propose to extend their business by adding several new lines of manufacture.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. III. TORONTO, ONT., MARCH 31, 1897 No. 13.

## CANADA LUMBERMAN

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

**Lumbermen visiting Toronto are invited to call at the office of the CANADA LUMBERMAN. We shall have pleasure in giving them any information desired.**

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.

CEDAR POSTS, ETC. APPLY TO S. R. BEETON, Anten Mills, Ont.

FOR SALE.

FOR HEMLOCK DIMENSION STOCK AND bill stuff, write to REID BROS., Hepworth Station, Ont.

WANTED.

3 CARS OF 2" No. 1 AND 2 AND COMMON Soft Elm. Address, BUFFALO HARDWOOD LUMBER CO., Buffalo, N. Y.

STEAM SAW MILL AND STAVE FACTORY for sale, with stock of logs on hand of upwards 500,000 feet, consisting of oak, elm, ash and maple; terms liberal. Apply to THOS. ROBINSON, Newbury, or DR. ROOME, London.

SITUATION WANTED.

BY MAN OF 18 YEARS' EXPERIENCE, IN woods, on river, manufacturing, grading and selling hardwood and pine lumber; desires a permanent position, or will accept temporary employment at present. For particulars and reference address Box 75, CANADA LUMBERMAN.

FOR SALE.

A CAR LOAD OF THE FOLLOWING KINDS of dry llumber: Grey ash, soft elm, soft maple, sycamore, red oak, chestnut, 1st and 2nds; one car wormy chestnut, one half car cherry, ditto sassafras; one car cull oak. Shipping point, Bismark Station, Mich. Central Railway.
J. C. SCHLIEHAUF, West Lorne P. O.

Send four 3-cent Canadian postage stamps for a copy of the LUMBERMAN'S VEST-POCKET INSPECTION BOOK, containing rules for the inspection of Pine and Hardwood Lumber in the leading markets of Canada and the United States.

## FOR SALE

### Timber Limits and Mill Property in Newfoundland

ALL THE PROPERTY OF THE EXPLOITS Wood Co'y in Newfoundland, consisting of 820 square miles Timber Limits, Saw Mill of 150 M. ft. B.M. capacity for 24 hours, Wharves, Booms, Chains and Anchors, Steam Launch of 75 h. p, and all necessary rolling stock ready for immediate operation.

The limits are covered largely with spruce, making it a most desirable property for the manufacture of wood-pulp, besides possessing a large belt of white pine, which has competed successfully against Canadian goods in the English markets

St. John's, Newfoundland, may be reached in 48 hours from Halifax, Canada, and to the mill is 15 hours' ride by rail from St. John's.

Correspondence Solicited.

J. T. SMYTH,
7 Angele St., Quebec, Canada.

### CURRENT TRADE CONDITIONS.

ONTARIO

The transactions of the past week would seem to indicate that the spring demand for lumber had commenced, the shipments being in excess of any previous week since the beginning of the year. The fine weather has no doubt had a stimulating effect upon the market, influencing purchasers to stock up for the season's business. There is yet, however, a wide gap between present business and what might reasonably be expected at this season of the year, more especially when we take into consideration the light supplies held by retailers and consumers. Any improvement in trade is nevertheless acceptable after a long period of depression, and the hope is expressed that this improvement will continue to expand throughout the spring and summer months. Apart from local trade, the shipments to the United States have been active. Buyers are apparently desirous of obtaining Canadian lumber, and to avoid the probability of paying a duty thereon, are purchasing freely for immediate shipment. Several schooners are now loading at Toronto, and this same condition prevails at many other lake points. The railway companies report an active business, the Grand Trunk having brought fifty car loads of square timber to Toronto for rafting to Quebec. There is also a fair trade doing in hardwoods. Elm, basswood and red oak show more activity than the other classes. Cedar and hemlock are being used quite extensively for local building purposes.

QUEBEC AND NEW BRUNSWICK.

Quebec merchants are commencing to return from Great Britain, Mr. Billingsley, Mr. Evans and Mr. John Stain having already arrived. Messrs. William Power and Harcourt Smith, both of W. & J. Sharples, are expected to arrive this week. They report having made good contracts, and anticipate an active season. As soon as navigation opens, which is likely to be early this year, heavy shipments will go forward. The market is firm for nearly every class of Quebec goods, and square white pine shows signs of advancing in price. Birch timber continues dull, and indications point to a surplus of this stock being again placed on the market. This has already affected prices, which are slightly lower. Lumbermen throughout the province report the roads breaking up, and many camps have been closed down. Several gangs of timber makers from Ontario, Michigan and Ohio have also returned from the woods. At New Brunswick ports a considerable quantity of deals is waiting shipment to Great Britain, notwithstanding that the regular steamers have taken part cargoes all winter. The United States market shows a slight improvement, and several mixed lots have been sent across the border. The prospects for successful stream driving have brightened, and lumbermen look forward to a prosperous season.

BRITISH COLUMBIA AND MANITOBA.

General business in British Columbia has shown a marked improvement since the first of March, and collections are reported to be much easier. Unusual activity exists in lumbering, as the result of the local demand for mining purposes and the increased foreign orders which have been placed. Although the organization of the combine to control the foreign trade, to which reference was recently made, has not yet been completed, there is every prospect of the manufacturers experiencing a more profitable year than in 1896, which was an improvement over the previous year. The Japanese Consul states that fifteen million feet of lumber will be shipped from Vancouver to Japan this season, and calls attention to a new industry which gives promise of good profits, viz., the manufacture of boxes for shipping tea from Japan. It is estimated that these boxes can be made from Pacific coast wood at about one-half what they cost in Japan. The construction of railways to the mining districts is providing a market for a quantity of timber. The situation in Manitoba and the Northwest has not changed since last writing. Railway traffic has been interfered with by the large quantity of snow, which is now fast disappearing.

UNITED STATES.

The reports from the white pine sections of the United States convey no tidings of an enlarged demand for lumber such as might be expected on the approach of the buying season. Outdoor operations have been checked by unfavorable weather, which has also made the handling of lumber difficult. The call for supplies from builders usually becomes quite active before the close of March, but this year an apparent backward tendency towards placing orders has restricted trade. Besides the better grades, which have been moving freely for some time, box lumber appears to be most sought for. Although shipments have been light, stocks at mill points promise to be considerably reduced before the new cut is in shape for market. At Duluth more than half the lumber remaining on the docks at the close of navigation has been sold, leaving only 50,000,000 feet available, which is largely No. 2 and better. In the east trade is improving, although somewhat slowly. Buffalo is receiving some lumber, and a less quantity is being shipped out. Some of the wholesalers have sent representatives to the west to look after stock, and some purchases may be expected as a result. It is thought that the first two weeks of April will witness a large movement of stock to wholesale points, as consumers must, by that time, make arrangements for their season's trade. At Philadelphia the shipments of pine and spruce show the spring movement to be commencing. Short lumber is moving moderately at Boston. Spruce frames are firmer, and a little more is doing in white pine. More encouraging words may be spoken of hardwoods than pine. The sash and door factories are buying freely, furniture factories are encouraged by a promising season, and altogether the outlook is favorable. More inquiries for stock are reported from Michigan points, Minneapolis, Boston and New York. Prices are firm, and the tendency is towards an advance. Oak, maple, poplar and ash have been good sellers.

FOREIGN.

The tone of the British market is decidedly buoyant. A large amount of buying is being done by country customers, and indications now point to the fact that present quotations will be maintained throughout the summer at least. Goods to arrive have been sold extensively, and buyers will probably have reason to congratulate themselves before the season is over. At the late auction sales Canadian goods brought average prices. Foy, Morgan & Co., of London, offered a small stock on the 17th ultimo. Breakey's 3 x 9 spruce deals brought £10, and Quebec 4th pine £7 15s. The Liverpool trade is active, and prices keep firm. There is no reckless buying, but a steady and prosperous business is being done. Much interest is taken in the opening of navigation, which will shortly take place, and arrivals are expected to be heavy for the first month. Representatives of Quebec houses who recently returned home will no doubt rush goods forward, as dealers are now in a buying mood and feel encouraged by the prospects for building, etc.

## STOCKS AND PRICES.

### CANADA.

Burke Bros., of Lindsay, Ont., sold over 60,000 barrels last year.

Wm. Stoneman, of Humphrey, Ont., has sold a quantity of hardwood lumber to Lewis & Gillies.

Vigars & Co., of Port Arthur, Ont., sold during March about a half million feet, mostly timber.

The Sauble Falls Lumber Co., of Sauble Falls, Ont., report a fair demand for elm and basswood.

S. G. Parkin & Company, of Lindsay, Ont., have taken out 10,000 pieces of pine in Digby township, above Norland.

Booth & Shannon, of Pembroke, have commenced shipping timber by the C. P. R. to Papineauville, where it will be rafted.

The Cookshire Lumber Company, of Cookshire, Que., shipped during the month of February 730 car loads of pulp wood to the United States.

It is reported from Buffalo that a deal is about to be closed for the shipment from Canada to that point of 12,000,000 feet of pine, presumably for storage.

The outlook for the building season at Lindsay, Ont., is encouraging. George Ingle, of the Lindsay Planing Mill, has already received orders for thirteen houses.

The Scott timber limits, situated in the townships of Anstruther, Cavendish and Harvey, Peterboro' county, will be offered for sale at Peterboro' on Thursday, April 15th.

Williamson & Crombie, of Kingsbury, Que., recently sold 500,000 feet of spruce and hemlock boards, at $12.50 and $11 at Boston points. Suitable stocks for shipment are not large.

H. Raney, of the firm of Buck & Raney, has purchased 35,000 cubic feet of timber along points of the Kingston & Pembroke railway. This timber will be shipped to Quebec.

M. Doody, of Cobourg, Ont., is shipping elm and birch timber from Gelert and Haliburton to Montreal, intended for the British market. He expects to have about fifty car loads.

It is reported that over 3,000,000 feet of lumber will be shipped from Prescott, Ont., to the yards of the Skillings, Whitney and Barnes Lumber Company at Ogdensburg, N. Y., within the next six weeks.

Hale & Booth, of Ottawa, are reported to have sold their large production of Michigan waney pine for Quebec shipment. The quantity is estimated at about 3,000,000 cubic feet, and will be for early delivery. This lot is reported as being very prime.

The estimated cut of lumber on the Restigouche river, in New Brunswick, this winter is 14,000,000 feet of spruce and 8,000,000 feet of cedar. Log hauling is completed on this river, as well as on the Miramichi and St. John, and the lumbermen look forward to a good driving season.

The Quebec government advertises a sale of timber limits for Wednesday, the 28th of April, at the Department of Lands, Forests and Fisheries. The limits are in the Upper and Lower Ottawa, the St. Francis, St. Maurice, Montmagny, Grandville, Matapedia, Rimouski, Bonaventure, Gaspe, St. Charles, Lake St. John and Saguenay districts.

On account of the good demand for spruce in European markets, this article in 3" deals will be extensively manufactured in Quebec and New Brunswick during the coming season. Several mills that have catered to the American market for years will this season saw deals, instead of thin lumber. The result will be that an exceedingly large quantity of spruce deals will be sent forward this year, and it is hoped that the article will not glut the markets.

### FOREIGN.

David Ward will bring down to Bay City, Mich., this season, 20,000,000 feet of pine logs.

Thompson Smith's Sons have a stock of 18,000,000 feet of logs for their Cheboygan, Mich., mill.

Kent & Macdonald, of Duluth, Minn., have made a sale of 3,000,000 feet for the Canadian market.

About 3,000,000 cubic feet of waney pine timber has been taken out this winter in the vicinity of Ashland, Wis.

Some sizes of shingles are scarce at Buffalo and other eastern points, and a new supply will be required before a very large spring trade can be done.

At Bay City, Mich., box lumber is held at $8.50 to $9, log run at $15 upward, and selected stock at $20 upward. Little demand is reported for bill stuff.

It is estimated that 30,000,000 feet of logs will be rafted from the Georgian Bay to Alpena the coming season, mostly for Albert Pack and F. W. Gilchrist.

The lumber cut this season on the Kennebec, in Maine, is estimated at 140,000,000 feet. From 15,000,000 to 20,000,000 feet was held over from last year.

At Foy, Morgan & Co.'s last sale at London, Eng., Quebec goods, per steamer Aswauly, sold as follows: 14/16 x 3 x 9, 1st spruce, £10; 12 x 3 x 9, 1st spruce, £10.

C. W. Morrison, of Ellsworth, Me., has secured a bond of all the timber lands owned by the Penobscot & Kennebec Land Company, consisting of 100,000 acres.

Orders for 10,000,000 feet of spruce for the British market have lately been obtained by Bangor, Maine, dealers, and a still greater trade is looked for early in April.

Logging operations on the Muskegon river, in Michigan, are closed for the season. The output has been about 40,000,000 feet, as compared with 33,000,000 feet last season.

A short log crop is reported from the vicinity of Duluth, Minn., and as a result good logs are in active demand at quotations about $1 in advance of ruling prices last fall. Present prices range from $6 to $8 per thousand feet of white pine, delivered at mill.

The Kirby-Carpenter Company, of Menominee, Mich., has sold 10,000,000 feet of lumber to Montgomery Bros., of Buffalo, to be shipped during the coming season. The prices paid are stated to have been $28 and $30 a thousand.

Some sales of hardwoods have lately been made at Philadelphia below ruling quotations, but it is said that this was done only in a few cases where it was necessary to meet maturing bank paper. It is not believed that hardwoods will be obtainable in April at the present prices.

Messrs. Allison, Cousland & Co., Glasgow, Scotland, held an auction sale of Canadian goods on the 17th March. Prices ruled firm, and the following were among the principal items sold:

## BUSINESS NOTES.

D. L. Shannon & Co., saw mill, Prince Albert, N. W. T., have sold out to S. McLeod.

A. B. Bettes, planing mill, Bracebridge, Ont., is announced to have assigned to J. W. Bettes.

The steam saw mill previously owned by Alex Scott, of Buckingham, seven miles from the Lievre river, has been sold to Christopher Todd for $1,030.

The Wilson Company, of Montreal, is seeking incorporation, with a capital of $100,000, to manufacture lumber, wood and tan bark. Among the promoters are Wm. Mitchell, of Drummondville, and David Mitchell, of Forestdale.

## SHIPPING MATTERS.

Further charters of lumber from Montreal direct to British ports have been made at 40s.

The steamships North Gwalia and Coquet will arrive in Montreal at first open water to load deals for the United Kingdom.

The steamship Treasurer, reported chartered to load at St. John, N. B., in May, will return and load two cargoes of deals at 40s for w. c. England.

The following sailing vessels are reported to have been recently chartered for timber cargoes from Quebec, for spring loading: "Alf," Quebec to Ayr, and "Prince Leopold," Quebec to Greenock.

R. P. Rithet & Co. say of British Columbia freight rates: "Rates for lumber vessels still maintain an upward tendency and the quotations for most destinations show some advance on those ruling a month ago."

Lumber freight rates from British Columbia points are as follows: Sydney, £1 11s 3d asked, £1 10s bid; Melbourne and Adelaide, £1 17s 6d; Port Pirie, £1 13s 9d; Freemantle, £2 7s 6d. West coast rates are: Valparaiso for orders, Pisagua range, £1 13s 9d; Callao direct, £1 12s 6d to £1 13s 9d. For the Orient, the rate to Shanghai is quoted at £2 2s 6d, and to Japanese ports, £1 15s to £1 16s 3d. To U. K., £2 12s 6d to £2 15s is the range, and to South Africa £2 15s to £2 17s 6d.

The following charters are reported: A ship, 1,111 tons, Dalhousie to Barcelona, deals, 51s 3d; two barks, 525 tons and 832 tons, Bathurst to Marseilles or Oran, deals, 56f.; steamer, 1,066 tons, Montreal to east coast United Kingdom, deals and timber, 47s 6d and 70s respectively; schr. Canaria, King's Ferry to Teneriffe, lumber, $11; barque Violet, hence to w. c. England or e. c. Ireland, spruce and birch deals, 42s 6d and 45s respectively; Nor. barque Eira, West Bay to w. c. England, deals 42s 6d; a steamer, 1,519 tons, St. John, N. B., to Cape Town, deals, 72s 6d; steamer, 1,885 tons, St. John, N. B., to west coast England, deals, three trips, beginning May, 40s.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Ottawa to Oswego, $1.00 per M ft., Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Arnprior to Montreal, $1.50 per M ft.; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. To New York for boat delivery, lots 50 M ft. and over, $3.00 per M ft., under 50 M feet $3.25 per M ft. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Boat delivery, lots 50 M ft, and over $3.50 per M ft., under 50 M ft. $3.75 per M ft Parry Sound, $4.00 per M feet; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany. 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway have been made a fixture, as below. Of any intended change due notice will be given lumbermen.

General instructions in shipping by Grand Trunk are embodied in these words in the tariff schedule: On lumber in carloads, minimum weight, 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be charged, and must not be exceeded. Should it be impracticable to load certain descriptions of light lumber up to 30,000 lbs. to the car, then the actual weight only will be charged for, but not less than 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond, to the same desination. For instance, the rates from Tara or Hepworth to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Wiarton to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, but in no case are higher rates to be charged than as per mileage table published on page 9 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale and Sundridge, to Toronto, 8c.; South River, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 11c. The rates on hardwoods average about from 1c. to 2c. per 100 lbs. higher than on softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other

valuable woods, application must be made to the district freight agent.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Cook's Mills, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Central Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods.

MODIFICATION OF HARDWOOD RATES.

THE Grand Trunk Railway and Canadian Pacific have made the rates on hardwoods from certain points to Toronto and Hamilton as follows. The regulations are over the signature of Mr. John Earls, W.D.F.A., of the G. T. R., and given in reply to a letter from Toronto hardwood men:

"After careful consideration we have come to the conclusion that, on and after Jan. 1st, 1895, a modification will be made in the present arrangements for hardwood lumber, to the effect that the rate will be 7½c. per 100 lbs from our Northern and Northwestern branches to Toronto and Hamilton. This rate, however, will not apply from main line points and the straight run between Toronto, Sarnia and Windsor; also that so far as rates on common lumber to points like Guelph, Galt, London, Woodstock, Ingersoll, etc., from all lumber shipping stations the rate will be the same on hardwood as on pine." On the old principle, we suppose, that half the loaf is better than none, hardwood men have something, possibly, to be thankful for, though there is no good reason why the rates generally on hardwood should not be as low as on pine. It is understood that the C. P. R. rate will be made uniform at 7½c. from same points.

# THE RETAILER AND Wood-Worker

## SHARPENING PLANE CUTTERS.

Apart from the importance of properly constructing the details of wood-cutting machines, the keeping of the cutting edges in good condition, both as to their sharpness and quality of temper, is one of the elements necessary to produce economical results. In the case of saws it is needful to have appliances for keeping the teeth of correct shape, and of the proper depth, and with the proper amount of set. Machines for this class of work are constructed by various makers, and mostly of one pattern, which experience has, no doubt, determined as being the best. The sharpening of the cutters for planing machines is equally important; but in the method of adapting machines to the grinding of the edges various systems have been tried. In emery wheels most generally applied to the grinding of bevel edges on the cutters, and which had continued in use for some years before the system was departed from, a wheel was used of such large diameter that the surface produced on the cutters was but very little concave or hollow. In practice it was found that as the wheel was reduced in diameter the concavity was increased to such an extent as to leave insufficient material at the back of the cutting edge for supporting it properly and carrying away the heat generated. No doubt for this reason the later plan was brought forward for producing a flat surface on the bevel of the cutter; the gradual wear of the grinding wheel does not here affect the uniformity of the cutting edge. Both of these systems are open to very grave objections, and, in fact, any mode of grinding based on this arrangement of the wheel and material must present a difficulty in obtaining good results. As the grinding wheel is in contact with the cutter, each particle of metal and of stone or emery that is separated in grinding must pass for a short distance between the wheel and the cutter. However small such a particle may be, it is impossible for it to be carried away without first being pressed between the two surfaces, and as the emery wheel is more porous than the metal the small particles get embedded in the wheel. From a large experience in the process of grinding the writer believes that any mode of grinding according to either of these plans must result either in only a small amount of metal being ground away or else in constant difficulty in keeping the grinding wheels in condition for acting. In a new machine recently brought out by the writer's firm for grinding cutters, the grinding wheel has a transverse movement given to it equal to two-thirds of the breadth of its face, so as to bring every part of its face over the work. By this plan its face is kept straight. The pressure of the wheel on the cutter is regulated by gravity. As the cutter is traversed beneath the wheel the grinding continues until the wheel comes to the limit of the adjustable stop in its lateral traverse; so that in the case of small "nicks" in the edge of the cutter, the machine can be set in operation and the grinding continued at a uniform rate until the "nick" is ground out. The result of experience with the grinding wheel acting in this way under a number of conditions proves that the particles of steel ground off the cutter get away so freely that no heat is generated in the grinding. In practice this means that the cutting edges themselves are left with their original temper, and will work for a much longer time without the necessity for re-sharpening. The traversing movement of the table is obtained by a very simple frictional reverse movement.

## WHAT CAUSES BUSINESS FAILURES.

In an effort to point out some of the causes for business failures, John Shaw, in Lumber, gives some suggestions in which retail dealers may find food for reflection. He says:

In every case a man, on contemplating going into any business, should be positively sure that he thoroughly understands it himself and is able to handle it without employing someone to manage it for him. This is especially the case in the lumber trade.

In perhaps no other business in the world is it necessary to use so much tact and keen diplomacy as in the lumber business. Many men fail from just a lack of this propensity. They are just square, honest, easy-going men, thinking that because they are square and right everybody else is. In these days of close competition, however, a man who has not got his eye teeth cut is "not in it."

That a man's honesty and integrity does not always bring a premium goes without saying, but a man who has these qualities established will certainly stand a storm that would strand a trickster. But no matter how much integrity a man has, if he wants to succeed in the lumber trade he has got to get right down to business, and must run on high-grade business principles. He must buy the stock that will sell, and keep his trade moving along. He must keep his finger on the public pulse, catering to its constantly changing whims. He must keep posted on the market so as to anticipate, if possible, any change in styles, for sometimes our architects are as changeable as the weather. If he has a lot of wainscotting or mouldings on hand that are "old style," he can charge them up to profit and loss—they are no good. Many other things in the builder's line need watching, but the things mentioned are especially liable to change in style.

One very prolific source of failure seems to be the idea that the lumber business will run itself and pay its own bills. Many a man has found out the mistake of this, and still there are many more who still hold on to the idea as if infatuated with it. It's no use talking, any man in any department of the lumber business must be in it early, and be there to stay the day out, and give it his whole, undivided, close attention. From the saving of small pieces there may often be enough realized to make a margin of profit. No man can expect to run the business successfully without looking after every detail of it.

When a man is sure he knows his business in every detail, and couples with this knowledge a vim and willingness to take hold anywhere and of anything that will help his business along, when he is able to catch on to little things as well as big ones, it is fairly safe to say that he will succeed in any business he may engage in. And if he lacks these qualifications he might as well stay out of business, for it is safe to say that he will eventually go to the wall.

## A NEW MACHINE.

The Timber Trades Journal, of London, Eng., calls attention to a new machine which Messrs. George Gordon & Co., timber merchants, Aberdeen, have added to their plant. It is a horizontal board-sawing machine, said to be the only machine of the kind in Scotland. The feature of the machine is that it has two horizontal parallel saws. The effect of having two saws is, of course, says the journal quoted, that the machine cuts a log into boards in half the time that a single-saw machine can. The log or tree to be divided into boards is placed by means of a crane on a massive iron table, 30 feet long and about five tons in weight. It is fixed firmly to the table by means of dogs, and the table is then run up along rails to the sawing machine by means of a revolving screw working on a rack. The end of the log is thus fed against the saws, one of which projects a little in front of the other. The saws are, as regards height one above the other, placed a distance apart equal to the thickness of the boards which are desired to be cut. The saw frames in which the saws are fixed are driven from side to side by connecting rods of a two-throw crank with opposite centers, so that the motion of the one balances that of the other and prevents vibration. The crank makes 200 revolutions a minute; each saw, therefore, making double that number of journeys across the machine in a minute. The machine can saw boards up to 48 inches in width, and its cut is found to be very clean. The makers are Messrs. Robinson & Son, Limited, of Rochdale.

## THE BEST IN THE DOMINION.

Mr. A. E. Prest, Mooseland, Halifax Co., Nova Scotia, writes: "Find enclosed $1.00 for my subscription to the Canada Lumberman. I think it is the best paper in the Dominion for those interested in the lumber business."

## FILLS THE BILL.

Mr. Richard Lockhardt, Riversdale, Ont., writes: "Enclosed find $1.00 to renew my subscription to The Lumberman. I think your paper fills the bill exactly, and is just what lumbermen need to keep them posted. I would not be without your valuable paper."

Provided no adverse change is made in the tariff the McMillan & Haynes Co., of St. Catharines, Ont., will erect a new saw factory.

# WOOD PULP DEPARTMENT

## PULP STATISTICS.

ACCORDING to the Trade and Navigation Returns of the Dominion of Canada for the fiscal year ending June 30, 1896, the total value of the pulp wood exported in that year was $627,865, as against $468,359 in 1895, says the Canadian correspondent of the Paper Mill. All of it, with the exception of $27,580 worth, went to the Uniited States. That is, the value of our pulp wood exports to the United States during the last fiscal year was $600,285. More than two-thirds of this was sent from the Province of Quebec, its total exports across the line amounting to $426,949. In 1895 the value of Quebec's shipments to that market was only $275,076. It therefore increased its sales there during the past year by $169,873. Ontario's sales to the United States have fallen off somewhat, those of 1895 amounting to $203,666, while those of 1896 amounted to only $196,016. Very little was sent in either fiscal year from Nova Scotia or New Brunswick.

Unless this pulp wood was bought at very low prices, there can hardly have been the one million cords of it that the advocates of the export tax have all along assumed to be the amount of our pulp wood exports to the United States. Half a million cords would probably be nearer the mark. For $600,285 the Canadian farmers would hardly furnish a greater quantity, especially as most of the wood was got out near the border, at a point where the cost of transportation to American mills is comparatively low, namely, along the part of the Quebec frontier in the neighborhood of Lake Champlain. Consequently the price realized by the producers for most of it would almost certainly be the highest obtainable on wood intended for export. It should be much higher, for example, than if the wood had been cut in an interior district, where the producer could get only what remained of the market price after paying the freight to the frontier. This $600,000, representing, as it does, prices paid for wood obtained for the most part close to the border, probably did not bring more than half a million cords. If that is correct, the process of ravaging our spruce tracts is not being carried on so rapidly by American pulp manufacturers as some of our alarmed advocates of an export tax imagine.

We have increased our exports of wood pulp. In the fiscal year covered by the report our total sales abroad amounted to $675,777, as against $590,874 in 1895. Our exports to Great Britain fell off from $251,848 in 1895 to $113,557 last year, while our exports to the United States increased from $336,385 in 1895 to $557,085 in 1896. That is, while we lost ground on the British market to the extent of $137,291, we more than made up for it by our gain of $220,700 in the United States market. Here again our export taxers find themselves confronted by a stubborn fact. The free movement of our spruce wood to the United States is not proving fatal to the development of an export trade in pulp across the border. It is true our sales of pulp wood there have increased from $458,813 in 1895 to $600,285 in 1896, or by $141,472, but at the same time our sales of wood pulp there also increased, and by the larger sum of $220,700. France took a small quantity of our pulp. Last year, as the year before, Quebec took the lead among the provinces as an exporter of pulp, the foreign sales of the provinces being as follows: Ontario, $194,409; Quebec, $251,485; Nova Scotia, $187,106; New Brunswick, $42,777.

## DUTY ON PULP WOOD ADVOCATED.

STRONG pressure is being brought to bear upon the Dominion Government to impose an export duty on pulp wood shipped from Canada to the United States, with what results will be known when the tariff of the new administration is placed before the country. Scarcely a week passes in which a deputation from some point does not make known to the government their opinions in regard to the matter, and it is only reasonable to suppose that the arguments presented will be given careful consideration at the hands of the authorities. A strong resolution passed by lumbermen and others in the vicinity of Penetanguishene is referred to elsewhere, and we note that a representation from the province of Quebec last week urged the imposition of an export duty upon all wood used for making pulp. Mr. Clergue, manager of the large pulp mills at Sault Ste. Marie, Ont., also had an interview with members of the government, and asked that an export duty on pulp wood should be imposed conditionally. It would, he thinks, lead to the dropping of the McKinley duty on lumber and to other results beneficial to Canada. Mr. Clergue says that the world's supply of pulp wood is confined to Canada, Norway and Sweden, and that were these supplies of raw material cut off the newspapers of London and New York would have to suspend publication for want of paper. The Government, it is understood, did not commit themselves to the expression of any view.

## WOOD FIBRE BOX.

THE wood fibre box is the latest thing to compete with old fashioned sawed boards. It is made of pulp, something after the style of fibre woodenware. It is supported by a light frame around the outside, and has no joints except at the corners. A factory has been started on the north side in this city, which will employ a force of 70 men. Thus the utilization of the wood pulp develops into enlarging fields. If the thing keeps on as it has in the last few years, pulp manufacture will beat the ordinary lumber business. It looks as if the time would come when wood grinding will be a bigger industry than saw milling. Improved methods of reduction are likely to be such that everything in the shape of wood and bark will be converted into pulp.

There is a concern in Wisconsin now that is buying millions of feet of hemlock to be worked up into fibre. The wood pulp business, when it reaches its full development, will utilize much timber that cannot be converted into lumber, and thus hasten the extinction of our forests, unless vigorous and widespread measures shall be taken to plant and cultivate anew. More New England and New York spruce is worked into pulp than is cut into lumber. This fibre business, moreover, will greatly add to the value of standing timber and timber lands, because it will render wood salable that once went to waste. —Northwestern Lumberman.

## PULP NOTES.

The project to establish a pulp mill at St. George, N. B., has not yet been abandoned.

About 20,000 cords of pulp wood will be shipped from Windsor Mills Station, Que., this season.

The town council of Chicoutimi, Que., have voted a bonus of $10,000 towards the establishment of a pulp mill.

Mr. H. R. McLellan was in Fredericton, N. B., recently investigating the chances for procuring a supply of poplar wood with which to manufacture pulp.

The Paper Makers' Association, represented by Mr. J. C. Wilson, Lachute; Mr. Barber, Georgetown; W. H. Rowley, of the E. B. Eddy Company, and others, lately appeared before the Tariff Commissioners at Ottawa in private. It is understood they asked, among other concessions, an export duty on pulp wood.

Dr. Drewsen, an expert chemist, of New York, was recently in Ottawa on business with the E. B. Eddy Company dealing with their wood pulp manufacture, and stated that the pulp wood supply is fast failing in the United States, and manufacturers are looking to Canada for the keeping up of their supply. If an export duty on pulp wood was imposed by the Canadian government there would be no alternative but for the Americans to come and manufacture their pulp here.

Pulp mills in New York, Massachnsetts, Maine and New Hampshire are receiving large quantities of their raw material from Canada in the form of spruce logs. The middlemen who buy the wood from Canadian farmers and lumbermen and deliver them to the pulp mills on the other side of the line make a handsome profit. What is the matter with Canadians working their own pulp wood in their own country? The Robb Engineering Co., of Amherst, N. S., are now making a full line of pulp machinery.

The Sault Ste. Marie Pulp & Paper Company have expended $2,000,000 in developing power, new buildings and plant, and have surpassed the wildest dreams of the most sanguine theorists. They have the largest pulp mill in the world in full operation day and night, and a second mill well under way, all of substantial stone, and most of the machinery in place. They also have a large moulding and smelting foundry and extensive machinery in full blast, together with carpenter shop, sash factory, etc., railway sidings, and the best docks on the river.

The Roberts Grinder Co., of Kingston, N. Y., have taken out patents in Canada for an improved apparatus for pulping, consisting of a moving pulping agent, a stationary table, through which the pulping agent extends, a pocket, means for continuously pressing pulping material through the pocket and against the table and against the pulping agent, and means for simultaneously moving the pocket across the pulping agent substantially in the plane of movement of the said pulping agent until the material in the said pocket is clear of the pulping agent and in contact with the table.

A dispatch from Washington states that the Republican members of the Ways and Means Committee have decided upon the rates for pulp and printing paper in the new tariff bill. The duties on pulp were changed from ad valorem, as in the Wilson bill, to specific duties somewhat below the McKinley rates. The new rates, compared with the McKinley rates, follow: Mechanically ground wood pulp, new rate 1½ cents per pound, McKinley rate $2.50 per ton; chemical wood pulp, unbleached, new rate ⅛ cent per pound, McKinley rate $6 per ton; chemical wood pulp, bleached, new rate ¼ cent per pound, McKinley rate $7 per ton.

A French paper contains the following in regard to wood pulp in France: All kinds of wood will answer for paper-making, but the quality and quantity of the product differ widely; 100 parts of oak or walnut will only furnish 26 to 29 parts of pulp, while 38 parts may be obtained from the same weight of willow or chestnut. The aspen (tremble) gives a very white paper, massy, but of slight tenacity. A mixture of 95 per cent. fir (sapin) and 5 per cent. aspen gives a good result. The fir is exported from Norway either as short logs (a length of 1.10 metres will avoid the payment of the French duty) or as damp pulp ready for the chemical process. The process is known as the bisulphite method. Its details are not yet made public.

# THE NEWS.

—Neibergall & Co. are putting in a hoop mill in connection with their stave mill at McGregor, Ont.

—G. D. Campbell & Co., of Weymouth, N. S., have placed an electric plant in their saw mill.

—Craig & Austin, of Kinmount, Ont., have started their shingle mill and expect to keep it at work the year round.

—M. J. Nealon, of Woodville, Ont., intends putting in a portable saw and shingle mill in the vicinity of Bloomfield.

—The quantity of lumber which passed through the Canadian Sault Ste Marie canal in 1896 is given as 26,346,000 feet.

—C. Meikle, Gravenhurst, Ont., is having a $4,000 steam yacht built at Kingston, Ont., for service in the Muskoka Lakes.

—It has been rumored that the Dominion government will hand over to the local government all the remaining crown lands in the province of Manitoba.

—Berry & Watson have dissolved partnership in the stave and heading business at Kinmount, Ont. The business will be carried on under the name of Watson & Davis.

—Joseph Turenne is reported to have been dismissed from the position of forest ranger in Manitoba, and Mr. Martin Jerome, ex-M.P., has been appointed in his place.

—Messrs. Seaman & Newman, of Wiarton, Ont., have dissolved partnership. Mr. J. P. Newman continues the old business, and Mr. A. G. Seaman has rented a mill at Barr Bay.

—A. G. Peuchen, of Toronto, has waited upon the council of Fenelon Falls, Ont., asking assistance towards starting a manufactory for wood, alcohol, charcoal and other products.

—Suit has been entered by Don. J Leathers against John Caufield, of Manistee, Mich., for $40,000 commission alleged to be due for negotiating a sale of timber limits to the Thayer Lumber Co., of Muskegon.

—President Cleveland celebrated the 165th annniversary of the birth of the First President of the Republic by signing and promulgating thirteen proclamations, establishing thirteen additional forest reservations, containing an aggregate area of 21,379,840 acres.

—A dispatch from Bangor, Maine, states that a petition asking that logs cut on the American side, manufactured in the Canadian provinces and re-shipped to the American market, shall be exempted from the proposed duty on lumber in the new tariff bill, has received many signatures in northern and eastern Maine.

—The proposed headquarters of the Dominion Rifle Association at Bisley, England, is to be constructed entirely of Canadian woods. It has been suggested that the native wood of a province be used for a particular room or hall, and that a neatly engraved plate be placed at a conspicuous point in such room, indicating the province which supplied the wood.

—Mr. Alex. Hamilton writes the LUMBERMAN from Cache Bay as follows: "I propose commencing to saw at our new mill at Warren on the 1st of April, and have about 8,000,000 ft. laying at mill to cut. I also have some hopes of securing a stock for the Cache Bay mills later on. We propose to build about seven miles of railroad to bring logs to the Warren mill."

—In the case of Harnwell vs. Parry Sound Lumber Co., the courts have decided that where a book-keeper is engaged for the term of one year, and his employment is continued after the expiration of that time, there is no presumption that it is to continue for another year, says the Court of Appeal. The employer may dismiss him at any time upon reasonable notice, and in this case, there being no evidence of usage to the contrary, three months' notice was held to be reasonable.

—The stevedore committee of the Buffalo Lumber Exchange have arranged to continue the same system for discharging cargoes of lumber in the port of Buffalo that has been in effect for the past four years. The following is the schedule of prices adopted for the season of 1897:

| | Per M. |
|---|---|
| White pine, log run, including strips and mill culls | $0.22 |
| Shorts | .40 |
| Four-inch strips in lots, in hold | .32 |
| Norway, 1 to 2 inch, and not over 18 feet | .22 |
| Bill stuff, 3, 4 and 5-inch | .28 |
| Lath | .07 |
| Shingles, 18-inch | .04 |
| " 16-inch | .03 |
| Basswood and elm | .25 |
| Ash, maple and oak | .35 |
| Cedar posts, 1 cent each. | |

On lath, shingles and posts a discount of 12½ per cent. is allowed. All barges and steamers over 12 feet in the hold must pay $5 for every 6 inches depth or fraction thereof in excess of 12 feet. Boats with more than one cross beam amidships, or with overhead arches, pay 3 cents per thousand extra on the entire cargo.

—A broad gauge charter is sought from the Dominion government by the Canadian Douglas Saw Manufacturing Company, Limited, composed of United States and Toronto capitalists, with a capital stock of $700,000. The head office will be in Toronto, and the company ask authority to manufacture all kinds of circular and band saws, saw-sharpeners, saw tables, logs, lumber, staves, shingles, etc.

## CASUALTIES.

—Mr. Dodds, of Mayo, was killed in the lumber woods at Whitney, Ont., by a log rolling on him.

—John Moore, of Otonabee township, was loading saw logs in the woods when he fell and had his leg broken below the knee.

—Word comes from Stanhope, Que., that a man named Lessard, from St. Joseph, was killed at Norton's camp by the fall of a tree.

—Onesime Fortier, of St. Sauveur, Que., while working in a saw mill at Cedar Hall, fell upon the circular saw and had his left arm nearly severed from his body.

—A serious accident occurred recently at Klock's limits, above Mattawa, by which a young man named Geo. Demeule, of L'Ille Verte, Que., was instantly killed by a log crushing his head.

—Ward Reid, a young man employed in Jas. Sim's saw mill at Blackville, N. B., was caught in the shafting. His legs and arms were bruised, and it is feared he sustained fatal injuries.

—A boiler explosion in a saw mill in Bruce county, seven miles from Tiverton, Ont., killed the fireman, Kenneth McDiarmid, aged 18 years. The boiler jumped about 50 feet endwise.

—Samuel Fleming, jr., of Hockley, Ont., was recently struck in the head by a belt which flew from the drive wheel of an engine in his saw mill, and died from the effects a few hours later. The deceased was a very industrious man of 35 years of age.

## TRADE NOTES.

When our correspondent was in Brantford lately he called on the Waterous Engine Works Company, who had just started on their second year in their new premises. Although built during 1895-96, the dullest year to many, they have been kept more than busy. They are now running with 246 men and working till 10 o'clock every night. Their shipments extend from the mines of the Pacific to the lumber and pulp mills of the Atlantic. Their reputation, established during the last 50 years, is such as to keep them busy even during the dullest season.

The Magnolia Metal Co., of New York, state that they have just closed their fiscal year on the first of March, and find that sales of Magnolia metal in America have been 25% larger than they were the year before, and that the volume of business exceeded that of any previous year during the past ten years. Their European business was found to be larger than the American business. The prospects for the ensuing year are very good. On the first of May the offices of the company will be changed from 74 Courtland street to Nos. 266 and 267 West street, where they will occupy the entire buildings. This change is made to give increased facilities for storage, shipping, etc.

The Small & Fisher Company, of Woodstock, N. B., have just completed for Mr. Fred Moore, an extensive lumberman of that locality, a rotary saw mill, probably one of the best that has been built in the province. The carriage is 37 feet long, equipped with Green Mountain dogs, and driven by rope feed. The saw arbor is 3½" diameter hammered steel, with saw collar forged solid, that is, upset from the bar itself. The log is set by man riding on carriage. The same company recently shipped three shingle machines to British Columbia, making about a dozen machines sold in that province within a year or two. They have completed an addition to their machine shop, and put in a new 80 h. p. boiler of E. Leonard & Son's manufacture. This addition provides fully 50 per cent. additional space.

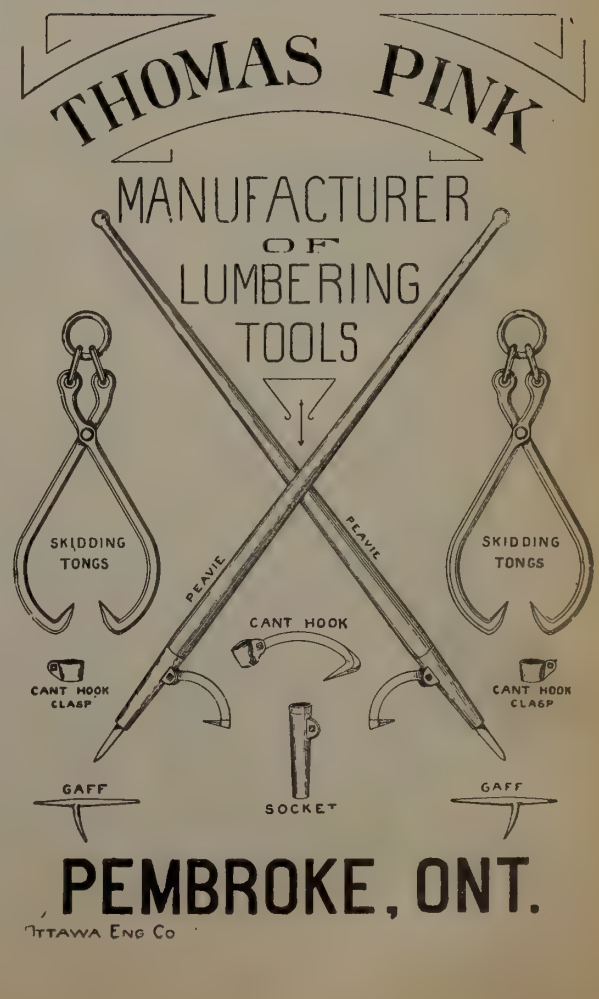
The Emerson Company, of Baltimore, Md., advise us that they have closed the following orders during the past two months: Warner Moore, Richmond, Va., one 52′ kiln; Anderson Lumber Co., Charleston, S. C., one 100′ kiln; A. J. Cottingham, Maxton, N. C., one 52′ kiln; H. B. Short, Lake Waccamaw, N. C., one 100′ kiln; E. L. Halsey, Charleston, S. C., one 66′ kiln; Hines Bros. Lumber Co., Kinston, N. C., two 100′ kilns; M. J. Clagett & Co., St. Louis, Mich., one 100′ kiln; Elizabeth City Lumber Co., Elizabeth City, N. C., three 100′ kilns; Watson Lands Lumber Co., Mayburgh, Penna., one 85′ kiln; Dixie Mill Co., Mobile, Ala., two 100′ kilns; Main & Co., Norfolk, Va., one 68′ kiln; Charleston Lumber Co., Charleston, W. Va., one 68′ kiln; Cummer Lumber Co., Jacksonville, Fla., four 100′ kilns.

The Dodge Wood Split Pulley Company's works at Toronto Junction are running fifteen hours per day, with a full complement of men. The company tell us that never in the history of their eleven years' business in the Dominion have they been so crowded with work. The manufacture of their celebrated wood split pulley is constantly increasing. Recent large shipments have been made to Madras, India, and to agencies in Central America, while one order alone for over 1,000 pulleys is at present being prepared for shipment for the English market. In addition to the manufacture of wood split pulleys the Dodge Company are also general machinists and millwrights, and have now in work complete power transmission for several electric stations, including shafting, floor stands, friction clutch pulleys, bearings, heavy iron centre driving pulleys, etc. The Dodge Company are also doing a lot of special work for some of our largest mining plants. In the company's machine shop at present are sixteen friction clutches in work for contracts on hand.

We notice from the Official Gazette that an application has been made to incorporate The Montreal Lumber Company, Limited. The three principal promoters of this company are men well known in their different localities: John McKergow, recently elected president of the Montreal Board of Trade, a man highly esteemed for his business qualities; W. K. Grafftey, who for 19 years was with G. A. Grier, the well known lumberman, afterwards becoming a partner for three years with E. J. Maxwell & Co., the hardwood dealers; and Geo. I. Dewar, the manager of the Export Lumber Co. at Ottawa, whose general knowledge of the trade could hardly be surpassed. The headquarters of the company will be at Montreal, but Mr. Dewar being always on the ground at Ottawa, will give valuable assistance to the business there. The intention is to do purely a wholesale trade, and as soon as business brightens they will no doubt receive their fair share. We wish them all success in the new venture. Until 1st May, when they commence operations, the temporary address of the company is, care of W. K. Grafftey, 27 Tupper street, Montreal.

There are 4,350 firms engaged in the timber trade of Great Britain and Ireland, 773 in London, 2,668 in England and Wales, 634 in Scotland and 275 in Ireland.

A Parrsboro, N.S., paper says: Six masts and twelve spars, forming a load for four cars, arrived here last week from the Tacoma Mill Co., Tacoma, Wash. The masts and spars, which are for the new barques, are sawed on eight sides and are remarkably handsome sticks.



## IMPORTS AND EXPORTS.

The tables of the trade and navigation of the Dominion of Canada for the year ending June 30th, 1896, contain some interesting statistics of the imports and exports of forest products, as compiled from the official returns. The total value of exports of wood goods is shown to be $19,996,803, against $17,504,302 for the previous year. The imports reached in value $1,942,708, as compared with $1,642,337 in 1895. The following table gives the value of the different classes of logs, timber and lumber exported, together with the proportion shipped to Great Britain and the United States:

| Article Exported. | Total Value. | Great Britain. | United States. |
|---|---|---|---|
| Logs, cedar | $ 3,458 | ..... | 3,458 |
| " elm | 124,988 | 627 | 124,361 |
| " hemlock | 18,607 | ..... | 18,419 |
| " oak | 6,627 | ..... | 6,627 |
| " pine | 1,423,989 | 500 | 1,423,489 |
| " spruce | 86,075 | ..... | 86,075 |
| " all other | 71,035 | 12,763 | 58,172 |
| Lumber, planks and boards | 8,513,710 | 583,393 | 7,041,074 |
| " spruce deals | 5,579,746 | 4,865,305 | ..... |
| " pine deals | 3,061,537 | 3,025,569 | ..... |

| Spoolwood | 99,576 | 99,045 | 531 |
| Doors, sashes and blinds | 190,004 | 168,673 | 1,150 |

Besides Great Britain and the United States, we find boards and planks were exported largely to other countries, chief among which were Australia, $96,482; British Africa, $76,149; British West Indies, $85,421; Argentine Republic, $224,118; Chili, $53,390; China, $86,628; South West Indies, $96,172; Brazil, $34,500; and to the British possessions in Africa, $16,295. Doors, sashes and blinds were exported to British Africa to the value of $18,883, and wood pulp to France to the value of $5,135.

Pine deals were imported by Germany totalling in value $11,145, while France imported spruce deals valued at $110,653. Other spruce deal importing countries were: Spain, $32,468; Brazil, $15,456; Portugal, $16,859; Australia, $7,791.

The principal increases over 1895 are in the case of pine deals, planks and boards, square pine timber and shingles. A falling off is shown in the exports of pine logs, owing to the depression in the Michigan manufacturing district.

Turning to imports of forest products, we find that Canada purchased from the United States the following: Logs and round unmanufactured timber, value $286,683; cherry, chestnut gumwood, hickory and whitewood, $145,312; mahogany, $21,974; oak, $207,191; pitch pine, $131,540; red wood, $4,829; Spanish cedar, $14,604; walnut, $52,998; white ash, $2,848; African teak, black heart ebony, lignum vitae, red cedar and satin wood, $3,565; ship timber and shipping plank, $2,577; hewn or sawed timber, $9,584; squared or sided timber, $341,048; sawed boards, planks and deals, $255,712; pine clapboards, $694; lath, $4,267; shingles, $28,741; staves, $23,992; veneers of wood, $1,742.30; manufactures of wood, $65,954.98; wood pulp, $2,856.50.

## FAVOR RETALIATION.

The ratepayers of Penetanguishene, Ont., are a unit in favor of protecting Canadian industries. A public meeting was held recently, at which a number of prominent lumbermen and others were present, when resolutions were passed favoring the imposition by the Dominion government of an export duty on saw logs equal to the foreign import duty imposed upon Canadian lumber. This resolution was moved by Dr. Spohn and seconded by C. G. Gendron. The former stated that nine-tenths of the timber in Ontario was owned by Americans, and if a duty was imposed on logs, this timber would certainly be manufactured in this country.

One of the speakers remarked that there were too many changes in the United States government. It took them about two years to get their machinery oiled up and in working order, and just when things begin to move smoothly another change takes place and upsets everything.

A. B. Thompson thought the duty should be imposed on saw logs whether the United States taxed our lumber or not. He did not believe in making our laws to suit the Americans.

On motion of H. H. Thompson, it was resolved to advocate a duty upon pulp wood leaving Canada. Mr. Beck favored a high duty, which would necessitate the manufacture of the timber in this country.

A resolution was then passed referring to hemlock timber. It was in substance, that whereas large quantities of hemlock timber are being cut down for the purpose of being stripped of the bark, and such timber is likely to be of greater commercial value at a later date, and in addition the forests are endangered by fire by reason of such timber lying around, therefore be it resolved that the government of Canada be requested to impose such an export duty upon tan bark as will prevent our hemlock trees from being slaughtered and wasted. At present there are 40,000 cords of tan bark used in Ontario alone, and 25,000 cords exported to the United States.

Another resolution favored the adoption of a similar alien labor law to that in force in the United States.

## CAN'T DO WITHOUT IT.

Mr. N. D. Seaman, of Woodford, Ont., in remitting renewal subscription, writes: "I am not ready to give up the Lumberman yet. I could not do without it while I am in the business."

### HARD MAPLE.

Hard maple, or rock maple, as it is called in the eastern states, is one of the most staple of all our native woods, and in gross bulk it is the most plentiful of all the hardwoods. At first thought this would seem to indicate that it should be an easy and profitable wood to handle. But the reverse is the case, as many an operator has discovered by experience, to his sorrow and the depleting of his pocket book.

In the first place, a large percentage of growing trees are so defective that they will not produce merchantable lumber sufficient to pay for hauling the logs to the mill. Another large proportion of the logs will barely pay for logging and saw bill, and a large proportion of the logs apparently good and sound, are found on sawing to be worthless.

There is probably no kind of logs in the entire list so deceptive in appearance and so hard to inspect and scale satisfactorily as hard maple.

A good buyer and scaler of maple logs is a rarity and a treasure to the saw mill man. Where there is one who can make his winter's scale of logs come within a whole row of apple trees of the actual product of merchantable green lumber as shown at the tail of the mill, there are nine who will scale so wildly that if their work was on anything except hard maple, they would be run out of the country.

But the trouble does not stop here, for let the mill scaler scale never so wisely, if the lumber is put into pile to await weather drying before shipment, the discrepancy between the shipping clerk's scale and the mill scale will be enough to take away the breath of the novice in the business, and generally, to cap the climax, when the mill man gets his returns for his dry stock shipped to the consumer, he generally receives another paralyzing shock.

Altogether, although hard maple is an honest, reliable and valuable wood and one of the most important in all the list of the native species, it is, nevertheless, about the most unsatisfactory to handle in the whole catalogue.—Hardwood.

### VIGARS & COMPANY'S NEW MILL.

A large mill is nearing completion at Port Arthur, Ont., for Vigars & Co. It will be 35 x 100 feet, two stories, covered by an iron roof, and is most substantial in character, resting upon heavy tamarac beams, which in turn are set upon several rows of piles, driven five feet apart. In the basement or ground floor is contained the shafting, a Cunningham steam feed engine and a Kalamazoo nigger—a machine calculated to do four times the work of the old nigger it replaces. On the south side of the main building is located the boiler and engine rooms. In the latter room a solid stone foundation is being laid, on which will rest the big engine. A battery of two 45 and one 75 horse power boilers is required to furnish power to the 120 and 40 horse power engines which drive the machinery. A second smoke stack will raise its lofty head beside the one which now towers above the mill. In the second storey will be located the various saws. The mill will be equipped with the latest devices for the speedy handling of all kinds of lumber.

On the north side of the mill, and attached thereto, is the lath mill, equipped with a machine of a capacity of 30,000 laths per day. Separated from the saw mill and about 60 feet south are the large dry kilns, and south of the kilns again is the planing mill.

The improvements to the saw-mill will, it is estimated, add from 5,000 to 8,000 feet of lumber per day to the capacity of the mill, which will have a total capacity of from 40,000 to 45,000 feet per day.

The work of finishing and equipping the mill is being pushed forward as rapidly as possible. The 25th of April will see the mill in operation, as it is necessary that a start should be made then in order to fill a large order for the C.P.R. for timber required to make repairs to the company's dock.

JAS. S. PARMENTER, Flushing, N. Y.

Dear Sir: We take very great pleasure in being able to say from nearly one year's use of your Patent Dry Kiln, we find it away ahead of anything we ever yet tried for thoroughly drying lumber without injuring it in the least. So far we have found exhaust steam alone sufficient for our purpose, so that it absolutely costs us nothing to run it. We thoroughly dry white oak, rock elm, balm and other hardwood lumber in less time than we ever did with a blast kiln, and especially find it a splendid kiln for drying white oak hubs. It does its work so naturally that neither hubs nor lumber are injured by it.

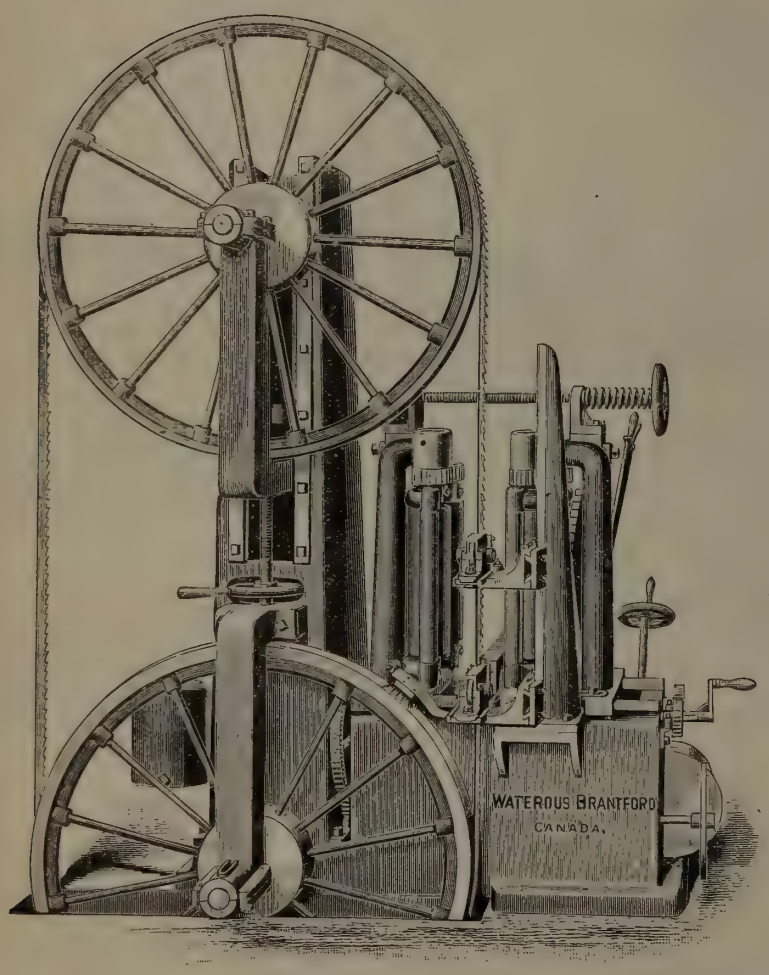
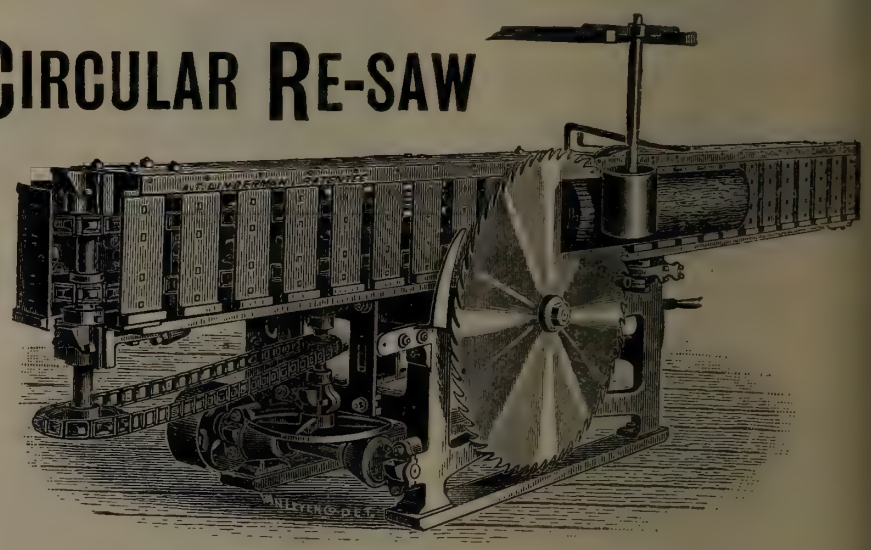
**16 H. P. SAW MILL**— Capacity 4,000 to 6,000 feet Lumber in 10 hours. Slab Saw, Edger, Planer, &c., can be attached.



## Re-Saws for Large Mills.

A Band Re-Saw converts a Cull Deal into say a one-inch Thin Cull and a two-inch Clear. Re-saws Thick Slabs and is largely used to increase Capacity of Mill 25 to 35%.

## CIRCULAR RE-SAW



### Re-Saws Slabs Equally as Well as Lumber.

It will convert your Slabs and other Mill Refuse into Lumber at a Small Cost. The lumber cut from slabs is usually of upper grades, much being clear; the amount that can be taken from a cord of ordinary slabs is from 400 to 700 feet surface measure, according to the thickness. Instantly changed to cut from 7/16 to 2" thick. In a single band or circular mill the daily saving, customers report, is 7,000 to 9,000 feet of ⅝ box lumber.

**A THOROUGHLY REBUILT.... NO. 5½ ECAN BAND RE-SAW**

FOR SALE CHEAP—60" Wheels; takes 4½" Saw; Re-saws 30" wide and 12" thick.

CORRESPONDENCE SOLICITED

# THE DAKE ENGINE

The accompanying cut shows the Dake Engine as attached to saw mill carriage set work. The engine, as shown, is reversible, advancing and receding head blocks at the will of the operator. Does away with coil springs used for receding head blocks, and is a practical assistant to a saw mill carriage, enabling the setter to handle the heaviest logs with ease. Steam is carried to engine by means of steam hose, or by swinging steam pipe with knuckle joints, taken from near the centre of carriage travel. As applied to carriage work, it has been in actual operation for over a year.

## FORESTRY AND THE LUMBER INDUSTRY.

BY THOMAS SOUTHWORTH.

THERE appears to be an impression among many of the men engaged in the lumbering business in this country that the methods and aims of the advocates of a rational system of forestry are not only impracticable in Ontario, but would, if a serious attempt were made to carry them out, prove inimical to the interests of the lumbermen. This attitude of many of our lumbermen towards the forestry movement is based on a misapprehension of the methods and aims of forestry advocates, excusable, perhaps, but a misapprehension nevertheless.

On the other hand, it is only fair to state that many forestry advocates have been apt to look upon the lumbermen simply as ruthless despoilers of the forest, and failed to fairly take into account the surroundings of an industry attended with so much risk. Foreseeing the disastrous consequences that must inevitably follow upon the reckless and complete destruction of our forests by axe and fire, these men endeavored to arouse public opinion to the realization of the impending danger. They saw many of the older settled counties in the province being rapidly stripped of trees—in some the percentage of woodland being as low as five per cent.; they found streams that once afforded considerable water powers drying up; they noticed that a period of dry weather has a greater effect on grain crops now than in former years; in fact they saw deterioration in the climate and resources of Ontario, and perceiving the cause they called for a cessation in the work of forest destruction. In their alarm it is, perhaps, not to be wondered at if some forestry advocates should seek first to stop the cutting of trees, overlooking the fact that forest trees are a crop to be harvested, and one that could and should be harvested in such a way as to secure successive crops of the same kind, where for various reasons it is desirable that a forest cover should be maintained, and a constant supply of timber for industrial purposes provided.

Forestry advocates do not now ask that lumbermen should cease their operations. They know they are engaged in harvesting a valuable crop that would go to waste except for them; they know the lumber industry is a very extensive one, employing a large capital and many men—an industry absolutely essential to our economic welfare.

What they contend is that the present wasteful method of exploiting our forest wealth, in which only a small part of the timber is taken out and the rest burned up, is unwise and unnecessary. They believe that certain areas of this province, areas that are unfitted for general agriculture and are the sources of streams, should be kept tree-covered, and suggest that some more rational system, some application of scientific forestry, be adopted by the government and by the lumbermen, to the greater profit of the lumbermen, and with increased and continual revenues ot the province. Lumbermen do not pose as philanthropists, neither are they in the business merely for their health. They know it would pay them better as a rule to take out only the trees of large growth, leaving the small ones to grow to maturity, but their experience teaches them that what young trees are left are apt to be a total loss from fire, so the practice is to cut anything that will make fence posts, despite the greater waste in trees of small diameter. It is generally conceded that more timber has been destroyed by fire than has been cut by lumbermen, and it had come to be regarded as useless to save the young growth where the highly inflammable tops and branches of the coniferous trees were left by the loggers to spread the fire.

RATHBUN LIMITS—SHOWING BLOW-DOWN, AUGUST, 1896.

The first important step towards a rational forestry system was the adoption of the fire ranging system proposed by Mr. Aubrey White, Assistant Commissioner of Crown Lands. This attempt to check the ravages of forest fires was not at first very heartily approved of by the lumbermen, who were very doubtful of its success. The results have, however, been so beneficial that now few limit holders fail to take advantage of it, though it is optional with them to do so or not.

The saving effected in the past few years, both to the provincial revenue and to the limit owners who have employed fire rangers, has been very great, and there is reason to hope that not only will the government endeavor to protect the revenue by more advanced regulations and restrictions in future sales of limits, but that the present owners of pine limits will, with the added safety from fire, adopt more economical methods and prolong indefinitely the period of profitable working of their forest areas. This can only be accomplished with greater immunity from fire, and with a more thorough knowledge of the habit of growth and other sylvicultural conditions surrounding Canadian forest trees. Some other qualifications than knowing how to fell a tree quickly and saw it into logs will be required on the part of foremen in the woods, just as some knowledge of scientific agriculture has been found advantageous in successful farming.

Where there has been so much haphazard and waste in our lumbering operations, it is interesting to know that there have been exceptions to the rule; that some, at least, of our lumbermen have pursued a different course, and, despite the added danger from the careless methods of neighboring limit holders, with considerable success. Among these may be classed The Rathbun Company, of Deseronto. Having secured timber limits on the streams tributary to Lake Ontario and the Bay of Quinte, this firm proceeded to erect mills of a substantial character and at an expense that would scarcely have been warranted had they not considered it possible to protract their operations in these limits over a much longer period of time than has ordinarily been found practicable in this country. Having this idea of permanency constantly in view, their limits have been worked in a manner that would have been disastrous if the usual fire had followed the winter's cutting. Instead of taking out all the pine, large and small, the foremen were instructed to cut selected trees throughout the area to be cut over, and particular stress was laid on the necessity of taking out and utilizing everything that was down. No trees were to be left on the ground to decay or burn because of being partially defective. As their license included other trees than pine, they were able to drive to their mills all the floatable timber, and, after the introduction of railways, some that could not be floated was also utilized in various

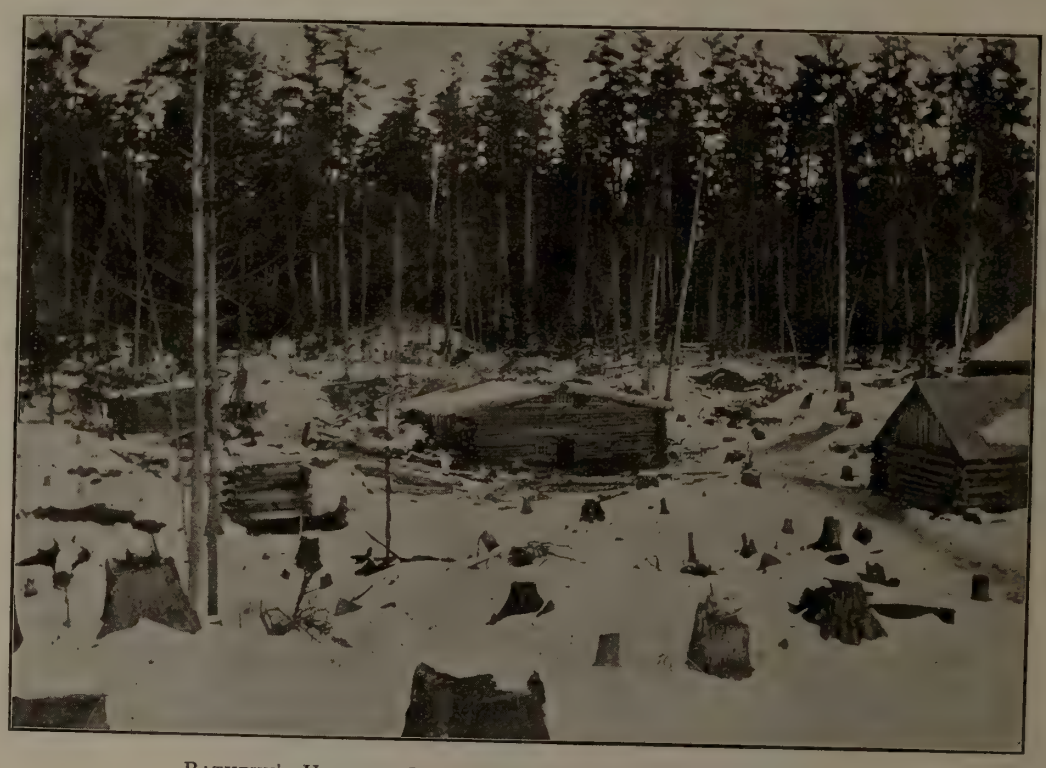
ways. The necessity of disposing of all the fallen timber of every sort as a safeguard against fire and as a prevention of waste, necessitated an extension of their plant beyond a mere saw mill, and brought about the extensive charcoal, chemical, brick, cement, and other industries located at Deseronto.

The fact that this company is still operating in limits that have been worked for many years is not the result of chance. They have been saved because precautions were taken to protect them. The question of disposing of the waste after logging is a very serious one. We cannot dispose of it here as is done in Germany, where even the little twigs are used for firewood. It is extremely dangerous if left in the woods, yet the expense of taking it out renders that plan impossible. The plan followed by one or two Michigan lumbermen, of burning the tops and branches as they lie on the ground early in the spring, has been pronounced impracticable by many of our principal lumbermen, yet this plan has been in successful operation in the county of Hastings for some time. Mr. James Scantlin, chief fire ranger in Rathbun's Hastings limits, in reporting to the Department of Crown Lands on the season's work, writes :

"I have made it a practice for the past five years to burn all the tops and rubbish of our previous winter's cut as early in the spring as it is dry enough to burn, and watch it so that it does not burn into the green woods. In this way we have had no heavy fires in the summer. Another advantage I find is that the young pines, both white and red, come right up and grow well, but I find where the heavy summer fire goes it burns too deep into the soil and seems to burn all the seed of the pine, so that other kinds of timber grow up, poplar and birch taking the lead and outgrowing all the other trees."

Mr. Scantlin writes that if the fire rangers, after this early spring burning, would give careful attention to the young pines, another cut could be taken out from them in 25 or 30 years. While Mr. Scantlin may be slightly optimistic in his views as to the time required to grow a pine tree to timber size, his experience in preventing fires is valuable, and his conclusions as to the conditions of growth of young pine correct.

Does it pay? Would it not have paid the Rathbun Company better to cut off the valuable timber as soon as possible, and then buy other limits? This question is frequently asked by those among whom the Rathbun methods are known. I have no doubt more immediate profit could have been shown by the speedy method of getting over a limit and taking out the pine. The expense of logging and driving per thousand feet would perhaps be less and the returns on the investment quicker, but that method of figuring does not take into account the permanence of the business, and a visit to the Rathbun limits in the township of Grimsthorpe will afford a fairly satisfactory answer to part of the query. The limits alongside have long been burned over, and the mills they supplied are idle, yet in this old limit that has been worked for many years it is estimated there is from 150 to 200 million feet of white and red pine still standing, most of it of good timber size. About ten million feet B. M. was taken out of it this season, and, to one not an expert no thinning out of the forest was apparent, except where a cyclone had left an extensive blow-down, which was cleared up by the loggers down to "anything that would make matches," as Mr. E. W. Rathbun's instructions to the efficient manager, Mr. Callahan, tersely put it. The photo appearing on the previous page was taken by the writer before the loggers had completed their work in the "blow down." Notwithstanding that many very small trees blown down in this cyclone were made into logs, thus reducing the average, I was informed by the government culler that the whole drive would average 90 feet B. M. to the log, thus showing the timber to be of good average size.



RATHBUN'S HASTINGS LIMITS, SHOWING CLEARING AROUND CAMP.

Good permanent roads have been built all through the forest, and the camps are in better shape than would likely be the case if they were only intended for temporary use. Around each camp a space of about five acres has been completely cleared, as shown in the accompanying illustration, and I understand it is proposed to cultivate and seed to pine and other trees each of these five acre plots this spring. While I believe this method of lumbering has paid the Rathbun Company better than the other, there certainly can be no doubt of its greater advantage to the province in the increased stumpage dues on timber that is cut instead of burned up.

---

Have any changes taken place in the lumbering business in your locality? If so, write a few lines to the CANADA LUMBERMAN giving the particulars.

The most beautiful trays and cabinets which come from Japan are made of the dark, irregularly-grained and wavy-lined wood of the kiaki, a tree closely allied to the elm.

## ONTARIO TIMBER LANDS.

A COMPARISON of the quantity of timber cut from the crown lands of Ontario in 1896 with that of the previous year shows a considerable increase in the output of white pine. Of hardwoods no definite returns are given. The following table, compiled from the reports of the Commissioner of Crown Lands, shows the estimated cut of different classes of wood :

| | 1895. | 1896. |
|---|---|---|
| Saw-logs, pine | 800,565,355 | 904,379,710 feet B.M. |
| " other than pine | 12,917,017 | 15,197,752 " |
| Boom and dimension timber, pine | 32,170,013 | 34,373,465 " |
| " " " other | 1,854,061 | 2,056,660 " |
| Square timber, white pine | 873,304 | 1,128,666 cub. feet. |
| Pulpwood | 31,115 | 35,057 cords. |
| Railway ties | 907,862 | 708,451 pieces. |
| Telegraph poles | 1,518 | 655 " |
| Stave and shingle bolts | 2,430 | 1,339 cords. |
| Piles and head blocks | 69,354 | 55,688 feet. |

In the year 1895 the area covered by timber licenses was given as 17,851 square miles, while last year only 13,722 miles were under license.

Regarding forest fires, the Commissioner in his report says :

"It has become evident that if the Crown domain is to be protected from forest fires some organized system of fire ranging will have to be put in force on the unlicensed territory similar to that which is in operation on the licensed lands. Owing to the excitement which now prevails in connection with gold mining and to the wide area over which the precious metal has been found to exist, there will scarcely be a corner of the newer parts of the province in which the explorer will not be plying his vocation during the coming summer. Explorers, like others, are good or bad, careful or careless, and as they continually use fire for cooking, keeping off flies, lighting their pipes, etc., the danger to the forest areas will be considerably increased. Every precaution possible has been taken to keep explorers out of the pine areas. Notices have been posted in the Rainy River district warning them not to survey or attempt to take up as mining lands areas which are covered with pine timber, and the surveyors have been instructed not to survey in pine areas. But notwithstanding all this it is found that explorers pay little attention to these regulations and notices, where they have reason to believe there is a prospect of finding gold. Nothing short of an active surveillance of the pine areas by a staff of fire rangers will have any deterring effect in preventing explorers entering upon pine lands in the prosecution of their search for gold. There is a large area of pine territory in an exposed position in the Rainy River district which ought to be carefully guarded during the coming summer, and in the territory north and east of Wahnapitae there is understood to be an immense body of pine timber which ought to have some supervision, with the object of preventing its being damaged by fire."

---

Another log raft will be built on the Columbia river at Stella, Washington, for San Francisco.

## THE CANADIAN TARIFF.

BELOW will be found the schedule of import duties on articles affecting the lumber and woodworking industries, as provided by the new tariff which went into effect on April 23rd last. The tariff is divided into four sections. By schedule "A" the following duties are imposed :

DUTIABLE GOODS.

Cane reed or rattan, split or otherwise manufactured, n.o.p., 15 per cent. ad valorem.

Corks and other manufactures of cork wood, or cork bark, n.o.p., 20 per cent. ad valorem.

Lumber and timber, manufactured, sawed boards, planks and deals, planed or dressed on one or both sides, when the edges thereof are jointed or tongued and grooved, 25 per cent. ad valorem.

Shingles of wood, 20 per cent. ad valorem.

Pails and tubs of wood, churns, brooms and whisks, washboards, pounders and rolling pins, 20 per cent. ad valorem.

Veneers of wood, not over three-thirty-seconds of an inch in thickness, 10 per cent. ad valorem.

Mouldings of wood, plain, gilded or otherwise, further manufactured, 25 per cent. ad valorem.

Wood pulp, 25 per cent. ad valorem.

Manufactures of wood, n.o.p., 25 per cent. ad valorem.

Fishing rods, walking sticks and walking canes of all kinds, n.e.s., 30 per cent. ad valorem.

House, office, cabinet or store furniture, of wood, iron or other material, in parts or finished, 30 per cent. ad valorem.

Belting, of leather, rubber or other material, 20 per cent. ad valorem ; former duty, 32½ per cent.

Saws, cant dogs, adzes, hammers, etc., 30 per cent. ad valorem ; former duty, 32½ per cent.

Steam engines, boilers, derricks, cranes and portable engines, 25 per cent. ad valorem ; former duty, 30 per cent.

FREE GOODS.

Timber or lumber of wood, viz., lumber and timber planks and boards of amaranth, cocoboral, boxwood, cherry, chestnut, walnut, gumwood, mahogany, pitch pine, rosewood, sandalwood, sycamore, Spanish cedar, oak, hickory, whitewood, African teak, black heart ebony, lignum vitae, red cedar, redwood, satinwood and white ash, when not otherwise manufactured than rough sawn or split or creosoted, vulcanized or treated by any other preserving process ; sawed boards, planks, deals and other lumber, when not further manufactured than dressed on one side only or creosoted, vulcanized or treated by any preserving process ; pine and spruce clapboards ; timber or lumber, hewn or sawed, squared or sided or creosoted ; laths, pickets and palings ; staves not listed or jointed, of wood of all kinds ; firewood, handle, heading, stave and shingle bolts, hop-poles, fence posts, railroad ties ; hubs for wheels, posts, last-blocks, waggon or gun, heading and all like blocks or sticks, rough hewn or sawed only ; felloes of hickory wood, rough sawn to shape only, rough sawn and bent to shape, not planed, smoothed or otherwise manufactured ; hickory billets and hickory lumber, sawn to shape for spokes of wheels, but not further manufactured ; hickory and oak spokes, rough turned, not tenoned, mitred, throated, faced, sized, cut to length, rough tenoned or polished, the wood of the persimmon and dog trees and logs and rough round unmanufactured timber, ship timber or ship planking not specially enumerated or provided for in this act.

Shovel handles, wholly of wood.

Corkwood or cork bark, unmanufactured, and sawdust.

RECIPROCAL TARIFF.

The preferential resolutions are as follows : That when the customs tariff of any country admits the products of Canada on terms which on the whole are as favorable to Canada as the terms of the reciprocal tariff herein referred to are to the countries to which it may apply, articles which are the growth, produce or manufacture of such country, when imported direct therefrom, may then be imported direct into Canada or taken out of warehouse for consumption therein at the reduced rates of duty provided in the reciprocal tariff set forth in schedule "D." That any question that may arise as to the countries entitled to the benefits of the reciprocal tariff shall be decided by the Controller of Customs, subject to the authority of the Governor-in-Council.

## NEW BRUNSWICK CROWN LANDS.

THE twenty-sixth annual report of the Crown Lands Department of the province of New Brunswick, for the year ended 31st October, 1896, gives the total receipts as $143,867,33, a slight falling off as compared with the previous year. The following is a comparative statement of the receipts from timber lands :

| | 1895. | 1896. |
|---|---|---|
| Sales of timber licenses | $ 13,896.25 | $ 5,179.75. |
| Renewals of timber licenses | 25,974.00 | 27,238 00. |
| Net stumpage | 100,142.39 | 98,421.82 |

There was a considerable reduction in the sales of timber licenses, as fewer licenses were applied for and the competition was not so keen as usual. During the past winter, however, the competition for timber lands has been marked. The cost of scaling, collection and protection of lumber was $9,337.27.

The statement below shows the quantity and kind of lumber cut from crown lands during the year, with the amount of stumpage charged thereon :

| Kind of Lumber. | Quantity. | Stumpage Charged. |
|---|---|---|
| Spruce and pine logs | 76,985,459 s. ft. | $ 77,559 14 |
| Hemlock logs | 12,785,743 " | 5,152 91 |
| Cedar logs | 14,279,880 " | 11,424 85 |
| Hardwood logs | 301,499 " | 301 39 |
| Hardwood timber | 40 23/40 tons. | 397 79 |
| Pine timber | 302 tons. | 302 00 |
| Spruce timber | 156 tons. | 78 00 |
| Wood : fire, stove, spool, pulp | 1,423 cords. | 240 22 |
| Hemlock bark | 156½ " | 149 20 |
| Sawn shingles | 8,519 M. | 888 80 |
| Railway ties | 117,440 pieces. | 2,348 82 |
| Cedar posts | 1,200 " | 6 00 |
| Spruce poles | 1,800 " | 4 50 |
| Telegraph poles | 725 " | 47 75 |
| Boom poles | 1,290 " | 25 80 |
| Brackets | 200 " | 2 00 |
| Knees | 2,525 " | 219 40 |
| Spool wood, white birch | 1,865,666 s. ft. | 1,212 28 |
| Stove wood | 460 pieces. | 7 80 |
| Fence rails | 5,100 " | 22 50 |
| Wier poles | 800 " | 8 00 |
| Fir logs | 11,000 s. ft | 5 50 |
| Rafting pins | 107 M. | 10 50 |
| Total stumpage charged | .... .... | $100,415 45 |

## WHY TREES DO NOT THRIVE.

IN the annual report of the Geological Survey Department, Ottawa, Prof. J. Macoun gives the following particulars of his observations in connection with the growing of trees :

"Later in the season I made collections at Prince Albert and in Southern Manitoba and was struck with what I shall call the hardiness of the trees and shrubs in these regions. I had seen that the Canadian Pacific Railway gardens at Moose Jaw and Medicine Hat grew trees and shrubs without being winter-killed and that the cause of the want of hardiness must be looked for in other directions than severity of climate. I had long suspected that the trees on the prairie died for the want of nourishment and exposure to biting winds and not from severe cold, and this year I became convinced of it. Were a supply of moisture given to trees, grown from seed, so that they could mature their wood in July or early August for a couple of years, and the grass allowed to grow around them without being cut or pastured over, enough snow would gather in the winter to give all the moisture needed for the next summer's growth. A study of any thicket on the prairie will prove this. Did the farmer but realize the importance of collecting the snow on his farm, he would begin at once to grow hedges around, say, ten-acre fields. These hedges besides being valuable wind-breaks, would be snow-gatherers, and in a few years belts of trees would spring from the seed sown within the hedge, and while the hedge would protect the young trees it would also gather the snow for the next year's growth. Success in tree planting will only be assured when steps are taken to collect the snow by means of hedges or some other way, and successful tree growing means the settlement of the prairies."

## ST. JOHN RIVER LOG DRIVING COMPANY.

THE above company held their annual meeting on the 7th ultimo, at which there were present W. H. Murray, J. F. Gregory, Geo. A. Murchie, John A. Morrison, B. W. Mallett, D. H. Nixon, D. H. Keswick, Donald Fraser, jr., C. F. Woodman, Edward McCollom and Cornelius Hagerman. The first business was the election of directors which resulted as follows : W. H. Murray, president ; G. A. Murchie, Calais ; John A. Morrison, Fredericton ; B. W. Mallett, Fort Kent ; D. H. Nixon, Hartland. Mr. J. Fraser Gregory was re-elected secretary.

It was resolved to continue in force the driving charges of last year, the actual sum to be paid by the operator for driving from Grand Falls being seventeen cents. All claims against the company on account of the drive of 1895 were settled, excepting that of F. H. Hale, who asked $3,000 damages. The company passed a resolution asking Mr. Hale to put his claim in such a way that the company could take action upon it, either through arbitrators, a defence at law or a settlement by payment in full. Last year the company drove 146,668,657 feet, and the tolls amounted to $23,810.36.

## RUNNING CIRCULAR SAWS.

WHEN everything is right and proper the saws will run and make good lumber. If a saw gets mulish and won't go, I would like to see it explained as to the wherefores and whyfores ; it may help some other fellow out, says a writer in the Woodworker.

Very few saw mills have sufficient power to drive a circular. There is half your trouble—motion up and down. You will find lots of thick and thin lumber. Why? Because your motion is up ; your saw is strained up to its running motion when it goes into the log ; when it comes out the motion is down. The sawyer gigs back and gets into the log before the saw has time to straighten up. If the saw happens to be laying out you will have a thin board ; if it happens to lay into the log you will have a thick one. Superintendent comes around and goes for foreman ; foreman goes to sawyer ; sawyer says it is in filing ; filer lays it to setworks. Every man has his excuses. Pretty soon your mill crew is at loggerheads, besides a poor lot of lumber. How will we remedy it? Take off your saw, hammer lightly on both sides close to rim ; if you get it too much it will snake.

First, see that track and arbor are level, collars true, and saw has proper amount of lead—say one-half inch in 60-foot track. I have run without any lead and done good work. One half inch should be the limit. I can remember when they run 5/8 to 3/4-inch in 60 feet. A close observer can tell pretty quickly if his lead is right. If your saw heats on rim and doesn't snake you have too much lead ; on the other hand, if the saw warms on the eye, there is not enough lead.

A correspondent writes that the make-shift saw grinder described in our March number is a dangerous piece of mechanism, and adds that it is just such contrivances that account for the injury of many persons.

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## AUSTRALIAN FORESTS AND N. S. W. TIMBER TRADE.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—Those who saw the magnificent display of timber made by New South Wales at the World's Exposition at Chicago would imagine that this colony, at least, was well wooded with varied trees of great value. Their conception would be true so far as the variety and value is concerned, but not as to the quantity.

New South Wales is divided into three natural divisions. The first the Pacific slope, lying east of the coastal mountain range, a strip of country averaging, perhaps, forty miles in width. The second is the Table Land, and the third the comparatively dry Western Plains. The first section was fairly well, and, in some places, is now, densely wooded, but the soft, straight-grained woods, the colonial pine, cedar and rosewood, have largely been cut down. The Table Lands have some forests of valuable trees, but they are scattered. The central region has few trees except along the watercourses, and these are of no great value.

No forests largely composed of one variety are found here as in Canada. Sometimes they are dense and tropical in character, the trees being hung with creepers, but more frequently they are open and park-like. Here will be found a pine, there a cedar, interspersed with a variety of eucalypti or gums. The latter embrace a great range of hardwoods, many of them of great toughness and strength, beautifully grained, taking a high polish, and of great durability. Some of them are almost impervious to the attacks of the teredo, the white ant and other marine and land enemies of timber. The fact that their specific gravity is too great to allow of their being floated the distance which they require to be carted to reach a mill or shipping point, and so many of the logs being found to be defective through checks or decay at the heart, makes the timber expensive. Efforts have been put forth by the government and those engaged in the trade to build up an export in these hard timbers, particularly for wood-blocking, but the efforts have not produced, and are not likely to produce, large results. The total export trade of 1895 was less in value than $150,000, and the major portion of this went to the other Australian colonies. The cut of timber in New South Wales in 1895 was less than six years ago. Queensland is somewhat better supplied with soft building timbers—nearly meets its own demand and yet exports a little. The export is rapidly diminishing, and were it not for the duty levied considerable quantities of building timber would now be imported. West Australia has its famous jarrah and karri, used in paving the streets of London, but is deficient in soft woods. Victoria and South Australia require both hard and soft woods.

What is the available forest area of Australia no one knows, but the government of more than one colony which deemed that it had sufficient timber for its own use and export for years to come, has awakened to the unpleasant fact that this is not so. Some effort is being put forth for the preservation of existing forests and the cultivation of new areas. Australia must, however, depend at an increasing ratio upon other lands for its timber supply.

The value of the importations into New South Wales in 1895 and 1891 were:

| | 1895. | 1891. |
|---|---|---|
| Dressed Timber | £ 35,986 | £ 147,018 |
| Rough " | 239,541 | 575,642 |
| Laths and palings | 6,432 | 9,643 |
| Doors | 7,224 | 25,537 |

This shows a great diminishment in 1895, owing in part to a lessened demand from the reduction of construction following the crisis of 1892-3, and a lowering in price. A portion of these imports were hardwoods and re-imports from other colonies. Excluding these the chief supplies came from the following countries:

DOORS.

| | |
|---|---|
| United States | £ 6,335 |

DRESSED TIMBER.

| | |
|---|---|
| United Kingdom | £ 5,022 |
| Canada | 765 |
| Norway | 20,975 |
| United States | 2,690 |
| New Zealand | 929 |

LATHS.

| | |
|---|---|
| Canada | £ 1,240 |
| United States | 4,618 |

ROUGH TIMBER.

| | |
|---|---|
| United Kingdom | £ 2,611 |
| New Zealand | 60,111 |
| Canada | 19,112 |
| Norway | 2,820 |
| United States | 67,236 |

From South Australia there came timber to the value of £78,513. This, however, was almost wholly re-shipments originating in New Zealand, Norway and Sweden, Canada and the United States.

SHOOKS AND STAVES.

| | |
|---|---|
| New Zealand | £ 2,333 |
| United Kingdom | 788 |
| Canada | 47 |
| United States | 1,979 |

These importations were under a duty which was removed last year, the trade returns for which have not been published. An examination of these figures will prove interesting and will require some comment.

DOORS.

The doors shipped to this market are mainly from San Francisco, made from California redwood. As soon as the city recovers from the depression, which has not yet passed away, the demand must grow. I had hoped that British Columbia would have shared in the trade, and an attempt was made to introduce cedar doors from Vancouver. The result was unsatisfactory. There is some prejudice here against cedar on the ground that it is too soft. It necessarily follows that they must sell at lower figures than the redwood until a proper appreciation of the wood is secured or else some other means are used to properly bring them before the public. Then, I am bound to say that the samples sent, which I saw, were not equal to those from San Francisco. The mouldings were not as well finished or fitted, and in some, wood of a coarse grain had been selected for the mouldings which apparently had been worked with a dull tool and a little across grain. This, added to the notion regarding the wood, compelled the agent to whom they were consigned to sell at an unremunerative price. Some of those sent were sizes not often used, and this further tended to reduce the net return. I am still of the opinion, after making careful enquiry, that a good share of the trade can be secured by a courageous persistence of properly directed effort.

Some pine doors once came from Canada to Melbourne and even to Sydney, I am told, though I have not found anyone as yet who remembers them. Whether a trade can be made in them is a question. I have not the facts at hand to form anything like an opinion. It will depend upon price. Those who know pine say that a better price could be obtained for the pine than the redwood. Of that there is no doubt, but how much better cannot be told until an experiment decides. The quotations of the Sierra Lumber Company, of San Francisco, a little while ago, were as follows:

| Size. | | |
|---|---|---|
| 2′ 6″ × 6′ 6″ × 1¼″, | double moulded | $2.50 |
| 2 6 × 6 6 × 1½ | " | 2.75 |
| 2 8 × 6 8 × 1¼ | " | 2.75 |
| 2 8 × 6 8 × 1½ | " | 3.00 |
| 2 8 × 6 8 × 1¾ | " | 3.50 |
| 2 10 × 6 10 × 1½ | " | 3.25 |
| 2 10 × 6 10 × 1¾ | " | 4.00 |

Less a discount of 40%, 5% and 2½% cash.

The sizes most used are 2′ 6″ and 2′ 8″ × 1½″.

An important item in deciding the cost of these doors would be the freight rate. One thing is certain, they could not come by any existing lines. The only chance will be by vessel direct from the St. Lawrence. There is no reason known to me why there should not be such a line of vessels. The other industries of Canada need it, and must have it if they are to succeed here as they ought.

DRESSED TIMBER.

It will be seen that in this class Canada cuts an insignificant figure. The bulk of the trade is from Norway and Sweden or re-exports from the United Kingdom. On my arrival I sought to advance this dressed timber trade. It is certain that it is more advantageous to Canada, whether it always is to the shipper or not, to ship dressed instead of rough timber. The dressed stuff shipped from Norway and Sweden consists of flooring, siding and shelving. It is not clear stuff, but most of it is full of small and tight knots. These knots, of course, wear unevenly in flooring, and do not take paint easily in siding and shelving. There was prejudice against Douglas fir flooring because its coarse grain splintered. I was told that much of this could be overcome by proper selection and sawing. One British Columbia firm had taken up this trade and its agent here prosecuted the work vigorously and got an entrance into the market for spruce shelving, also for fir flooring, and others were working at it. The Canadian steamers were used to bring the stuff, but just when trade had got on a permanent footing, flour came into demand and the lumber was shut out. Upon seeing steamer after steamer come in without any timber on board, the orders were sent to San Francisco, from where there are frequent sailing vessels. It does now look as if the first results of my efforts in this direction will accrue to the United States. Nevertheless, I think the B. C. millmen will soon find a way to overcome this difficulty. Dressed stuff has already come and more is under way as part cargo of sailing vessels.

There is here a matter on which I should like to get the views of Eastern millmen. They meet the Baltic timber in England, where the freight is against them; could they not dress certain classes of timber and ship to this market, where, if the vessels sailed from the St. Lawrence, they should be on equal terms so far as freight is concerned? The Baltic flooring is 6 × ⅞; the British Columbia is dressed out of 6 × 1, and is therefore ½ an inch narrower than the Baltic. The latter is quoted at 13s. 6d. per one hundred superficial feet, while Oregon, as it is known from B. C., has sold at 11s., but 11s. 6d. would be paid for it if it could be had.

Laths do not call for special reference.

ROUGH MERCHANTABLE TIMBER.

Under the low prices prevailing some of the owners of limits in British Columbia have concluded that their timber will pay better to permit it to remain in the forest than to cut and ship it. A telegram is to hand that the Pacific Coast combine has been reconstructed. It was rotten from the start last year, and it certainly did not greatly help the Canadian mills, which had the reputation of pretty fairly keeping their agreements. Whether the reconstruction will do better is to be seen. The trade is done through importers, known as "Indent Merchants." He takes orders from what in Canada would be known as the owner of a lumber yard, to which a planing and resawing mill is attached, and then orders from the mill or its broker. Formerly anything shipped as rough merchantable was accepted without demur and the cargoes were paid for in advance or on receipt of the bill here. Three or four years ago a lot of inferior stuff was shipped by a decaying mill, and at once demands were made for a reduction in price for inferior quality. Since then these reductions have been of frequent occurrence, and have been a serious loss to shippers. In some cases the claim was a just one; in others it was made as a matter of course. The buyer had nothing to lose, while the seller had to pay the cost of the survey or arbitration in addition to any reduction that might be found against him. The importer fell back on the mill that shipped the stuff. The result was that the millman, who was not really represented in the arbitration, was the sufferer.

Shortly after my arrival I suggested a temporary plan for meeting this difficulty, and it was tried soon after on a cargo on which there was a dispute. It did not last, for two good reasons. In the first place, there are two very different opinions held on the opposite sides of the Pacific as to what constitutes "rough merchantable timber." The verbal definition was the same on both sides—timber with a certain proportion of sap and tight knots—but when logs were cheap and lumber dear the stuff sent here was really "selected and clear." Now that the conditions of trade are reversed the millman wishes to ship according to the literal definition, while the Sydney man demands that his timber be of the old type. Until there is an understanding upon this point no method of settling a dispute can be satisfactory. The other trouble is worse still. So long as the seller is very much more anxious to sell than the buyer is to buy, so long will the buyer get concessions in his favor in the drawing up of an agreement that practically puts the case in his hands.

No scheme for a general settlement of a dispute is of any value in the face of a special agreement that was designed to override it.

SHOOKS AND STAVES.

Here again Canada is out of it. Some oak staves do come here from Ontario via New York, and are credited in the return to the United States. There is an opening

here for Canadian enterprise. About one hundred thousand tallow casks are required annually in this colony. The material is imported from B. C. as pickets, made into casks in Sydney, mainly by hand, and then taken to pieces and shipped in the knock-down to the interior boiling-down factories. There should be an opening for a barrel factory to do this work in British Columbia.

A promising business was opened up three or four years ago in spruce butter boxes. When I came out it had received a set back. It was said the spruce tainted the butter. A commission man who had written a good deal to Canadian newspapers was urging the Canadians to ship the boxes. He said he could sell any quantity of them. It was true, as he said, that well seasoned spruce did not taint the butter, but there was another obstacle in the way which he could not be brought to see. New Zealand has a white pine that is odorless and well adapted to this purpose. It is perishable and useless for building purposes, and therefore cheap. So long as that New Zealand wood can be landed here at past prices, there is no profitable market for Canadian spruce. When the white pine gets scarcer and dearer, as it must by and by, there will be.

Correspondence has been opened up to see whether a trade cannot be done in soap, candle and other merchandise boxes.

In conclusion, if asked what can be done to improve trade, in addition to what I have said. I should point out this fact: Much of the lumber coming here from British Columbia mills is brought through San Francisco houses. The course of the trade is millman, San Francisco broker, Sydney importer, timber merchant, builder or contractor. The trade passes through five hands, making numerous delays, expenses and misunderstandings. At least two of these middlemen are unnecessary. It is possible that a Cananian mill owner will, not long hence, open a yard and do the trade direct. If placed under proper management it will succeed, but that "if" is an important one.

## DIFFERENT RESULTS IN SCALING LOGS.

BAY CITY, MICH., April 6th, 1897.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—Observing the communication in your last issue under the caption, "Different Results in Scaling Logs," I have prepared the following, which may interest some of your readers.

BAND AND ROTARY LOG SCALE.

An experience of several years tallying lumber cut by different saws mentioned, after it had been through the edger and trimmer, and a comparison of the lumber with the log scale, as shown by the different systems of log scaling, has revealed a difference in favor of the lumber scale of from 20 ft. to over 300 ft., except by the system of band and rotary log scale. In the first place, logs are not cut to waste as they were a few years ago, nor is there the same desire to saw a large number of logs into lumber and waste without regard to quality and manufacture. Conditions have changed. The object now sought is to saw straight, cut all you can and do it well, slab light, and be conversant with the different grades of lumber, so as to cut the logs to the best advantage. I claim that a 4" face on straight logs is all that should be left when slab is taken off. This scale is figured for plump inch, as lumber will surface one side when seasoned ⅞" strong. The band saw scale is figured on light ⅛" kerf and the rotary scale on light ¼" kerf.

It will be noticed that the number of feet does not always increase in the same ratio as the diameter of logs increases, viz., a log 12 inches in diameter and 12 feet long, band saw scale, contains 84 feet, and one of 13 inches in diameter and 12 feet long has 102 feet, a difference of 18 feet; while a log of 14 inches in diameter 12 feet long has 117 ft., a difference of only 15 ft. as between logs 13 and 14 inches diameter, and 3 ft. less than the difference between logs 12 and 13 inches diameter. The reason for this is as follows, as a test will prove: By increasing the diameter of logs in inches only one-half an inch is gained all round for every additional inch to the diameter, and there is not sufficient log left on the outside to make an inch board. The next size being ½ inch larger all round, there is an inch board on each side more than on the log one inch smaller, besides the additional width on every board cut, and this makes the seeming inexplicable difference between logs of different diameters. I claim that logs and standing timber scaled by this scale will cut very close to the actual scale of the lumber. Apply this test and you will be convinced.

HOW LOGS SHOULD BE MEASURED.

All logs, good, bad and indifferent, should be measured for full quantity without any allowance whatever for defects. The variation in quality by this rule would then be offset by variation in price. The theory is that a quantity of fairly good logs might be reduced in quantity to good wood, but a buyer would base his estimate of value from superficial appearances as a whole, and if he secured the logs, would pay for perfect stock at a reduced price. In lumber, culls are measured for full contents and sold at almost one-half price of good stock. Why should not logs be measured the same way?

| BAND SAW LOG SCALE. | | | | ROTARY SAW LOG SCALE. | | | |

## DUTY ON LUMBER AND SAW-LOGS.

ORILLIA, ONT., March 31st, 1897.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—It has been stated that a change is coming over the spirit of a large proportion of the Liberal party in regard to trade relations with the United States. The fact is, Canada has frequently shown her willingness to make any honorable arrangement that would lead to freer trade with the Americans, and all such efforts have been repulsed, more bluntly recently than ever before. The Dingley bill, should it pass, will impose a duty of $2 per thousand feet board measure on white pine lumber, and twenty-five per cent. ad valorem is to be added on lumber entering the States from any country that places an export duty on saw-logs. It is to be hoped that such an unreasonable bill will never pass the Senate, but if it does become law then the only honorable course for Canada to pursue will be to meet tariff with tariff, regardless of results. The United States cannot expect Canada to submit to the payment of an import duty on lumber entering the States from here, and at the same time permit Americans to buy, cut, and take to their own country, vast quantities of the choicest pine on the continent, from here, without paying an export duty thereon, and this export duty should in no case be less than the import duty charged by themselves. If the Dingley bill had imposed $10 duty instead of $2 it would have been no worse, because either is sufficient to prohibit the common grades of lumber from being shipped to the States, therefore if the threatened twenty-five per cent. be added it can do no further harm. There is no question, however, that the lumber manufacturers of Canada would for a brief time feel keenly the loss of the American market for coarse cheap lumber, but not for the better qualities, for fortunately the time has now come when not only white pine deals but all other thicknesses of the upper grades of lumber can be shipped with profit to the British and other trans-Atlantic markets, at better prices than the Americans can afford to pay; and doubtless when necessity demands manufacturers will find a profitable market in South America and elsewhere for all the rough grades of lumber not required for home consumption in Canada. It is pretty well understood that the Americans can get along for a few years without Canadian lumber, but the time will soon come when they will need it and will not be able to get it, because other more profitable and more reliable markets will have been found for the total output of this country. And even at the present time closing the door of American markets to Canadian lumber will benefit only a few of the Americans, namely, the manufacturers, who will be in a position to charge higher prices, causing a direct loss to the many thousands of American consumers. It is possible, however, that the Dingley bill, now before the House, will be amended as far as the import duty on lumber is concerned. And I hope it will, as we desire neither an export nor import duty to be imposed on logs, lumber or shingles. The freer the trade between ourselves and our neighbors the better, and only in the event of their refusing to deal with us on fair, even terms, and in self-defence, would we desire an export duty to be imposed. With reference to pulp and pulpwood, it seems most unfar to Canadians that hundreds of thousands of cords of spruce should annually be allowed to be taken to the States free from export duty, and at the same time we submit to payment of an import duty on every ton of pulp that is shipped across the line. And the Dingley bill claims to increase this unjust duty. It has been estimated by experts who have explored the spruce localities of the United States that they have only sufficient pulpwood to last their mills about five years, if they import none from other countries, while Canada contains enormous spruce forests, together with numerous immense water-powers, which advantages place her in a position to almost lead the world in the manufacture of pulp.

Yours truly,
A. TAIT.

## PERSONAL.

Mr. Levi Crannell, of the Bronsons & Weston Lumber Company, Ottawa, has been elected president of the Reform Association in that city.

Mr. Francis H. Clergue, manager of the Sault Ste. Marie Pulp and Paper Co., Sault Ste. Marie, Ont., gave THE LUMBERMAN a pleasant call early last month.

Mr. Richard Hall, formerly manager of the Ontario and Western Lumber Company at Rat Portage, Ont., has gone into the mining business, and will devote his time to the preparation of plans for stamp mills and mining machinery.

Mr. Jules E. Tache, of the Department of Crown Lands, Quebec, died in the provincial capital on the 19th ultimo. Deceased was a son of the late Col. Sir Etienne Pascal Tache, K. C. M. G., A. D. C. to Her Majesty, and was a descendant of one of the most illustrious families.

Mr. Lewis H. Swan, late manager for J. W. Howry & Sons, of Fenelon Falls, Ont., is said to have decided to remove to Buffalo, where he will conduct a wholesale lumber business. Mr. Swan is an energetic business man, and will no doubt secure a fair share of patronage.

On Sunday, April 4th, Mr. Herbert Burt Rathbun, son of Mr. H. B. Rathbun, of Deseronto, died at Belleville, Ont. Deceased was born in Deseronto and graduated as B. A. in 1883. On his return from college he became connected with the business of the Rathbun Company, supervising the yard department until failing health forced him to relinquish the work. The disease developed into consumption, and although he rallied for a long time, no hopes were held of his recovery. He was a director of the Rathbun Company, Bay of Quinte Railway Company and Deseronto Navigation Company, and was for five years deputy-reeve of Deseronto.

The Jenckes Machine Co., of Sherbrooke, Que., are supplying the machinery for a pulp mill at Chicoutimi.

Barber & Watson, manufacturers of water wheels and mill machinery, Meaford, Ont., have dissolved partnership. Mr. C. Barber continues the business.

One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

*TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## THE UNITED STATES TARIFF.

THE Finance Committee of the United States Senate, by whom the Dingley tariff bill has been uuder consideration for some time, are not to be charged with hasty legislation. It was announced that before this date the bill would be presented to the Senate, that the lumber section would be the first to be considered, and that in case the proposed duty should be sanctioned, it would become operative by the first of June. The probability of this taking place is now out of the question, and no one ventures to predict the exact time when the interesting document will be reported to the House. After this stage is reached probably a month will be spent in discussion before the bill is ready for the president's signature, and it is safe to say that the tariff will not become law until late in the summer.

The announcement was recently made that a retroactive clause had been added to the Dingley bill, providing that, should the bill become law, all imports should be dutiable from the first of April. Later information, however, is to the effect that this provision is not likely to appear in the bill when it reaches the Senate, as the present tariff will not be repealed until the new one goes into effect, and there cannot justly be two conflicting laws on the same subject at the same time. The main object in inserting the clause was to prevent importers from making large purchases of lumber and other foreign goods, thus weakening the market.

A bitter fight is being made by Michigan lumber manufacturers against the imposition of the duty. In this they have the support of the paper trade, who are interested in obtaining free pulp wood, and of the consuming public, who will not consent to the imposition of a tax which they will be called upon to pay. These combined forces, together with the wholesale dealers interested in Canadian lumber, represent a strong opposition, and already rumors are afloat that the bill has been greatly modified in its protective features by the Senate committee.

A study of the new Canadian tariff furnishes little light as to the probable action of the Dominion government regarding an export duty on saw logs and pulp wood, but without doubt an American import duty of $2 per thousand feet on lumber will be met by retaliatory measures. It is probable, however, that the final revision of the United States tariff will be such as to render unnecessary any such steps. Should this not prove to be the case, our lumbermen must accept the situation, and at once take steps to devise ways and means to develop our foreign trade. How this can best be accomplished is a question which requires thoughtful consideration, and in any policy which should be decided upon the interests of the small manufacturer should be carefully guarded.

## COMMERCIAL AGENTS AND FOREIGN TRADE.

CIRCULARS were sent out some time ago by the Minister of Trade and Commerce to the various boards of trade throughout Canada requesting suggestions as to the best methods to be adopted for the extension of our foreign trade. The replies in nearly every instance recommended the appointment of commercial agents in all countries where there is a fair probability of placing Canadian goods. It is understood that the government has decided to act upon the recommendations, and will shortly appoint suitable persons for the positions. This would appear to be a step in the right direction, and if properly carried out will certainly result in developing our export trade to a much greater extent than has been done in the past. To this method of making its manufactures known the United States owes no small amount of its foreign trade, and to-day it ranks among the largest exporting countries of the world.

That Canadian manufacturers are realizing the importance of foreign markets is shown by the fact that several firms have already sent special agents abroad to report on the possibilities for trade, the success which they have met with only confirming the conviction that Canadian goods are little known in many foreign markets where bright prospects for trade exist. The pioneeer work, however, such as the introduction of the goods and the establishing of a connection, has invariably been found expensive—so much so, indeed, that only a very limited number of Canadian manufacturers could thus afford to investigate for themselves the possibility of foreign markets. Considering the wealth of Canadian forests, the number of lumbermen who have visited the markets of Europe and other countries with the object of learning their requirements is so small as to count for little, and here is where commercial agencies may be of service to the country if judiciously and carefully managed. The Canadian consuls who have been stationed in foreign countries in past years have certainly been of some benefit, and many of them are fully alive to the duties of their positions. That others might have been of much greater service will probably be admitted. The reports sent to the government are frequently so general in character as to be of little value to persons desiring information of any particular class of goods. It should be the duty of our consuls to give as far as possible specific information regarding the classes of goods which are in most demand in the country in which they are located, to furnish suggestions as to best methods of manufacture and shipping, to give approximately the cost of freight, and similar data, thus placing the Canadian manufacturer in a position to estimate his chances for developing a profitable trade.

By the courtesy of Mr. J. S. Larke, commissioner for Australia, we are permitted to publish a communication on another page descriptive of the timber trade of New South Wales, which should be carefully read by lumber manufacturers in this country. Mr. Larke clearly points out that a much larger trade might be done by Canada in dressed timber and doors, but unless mill men exercise greater care in the manufacture of stock the advancement in that direction is likely to be slow. In placing goods upon a new market, it is especially necessary that the specifications should be exactly complied with, otherwise opportunities of developing an increased trade may be permanently lost. Mr. Larke is of the opinion that we could compete successfully with the Baltic flooring, and provided that a line of steamships sailed from the St. Lawrence or maritime province ports, there would seem to be no reason why this could not be done. The question of shipping facilities is a very important one, and on which depends to a large extent the future of the Canadian lumber industry. Therefore we express the hope that before many years shall have passed the government of Canada will take such steps as will provide for a regular line of steamers between Canada and her principal importing countries.

In this connection mention might be made of the fact that, acting under instructions from the Minister of Agriculture, Mr. C. C. Eldridge, of Vancouver, is now making a collection of British Columbia products, to be exhibited at the World's Exhibition at Stockholm. Included in the display will be sections of trees, sawn timbers, and other manufactures of the forest.

THE red cedar shingle business of the Pacific coast appears to be taking on new life. For the past year or two the manufacture of shingles on the Pacific coast has been greatly curtailed, owing to the depression in the trade and the low prices ruling. Manufacturers have preferred to allow their mills to remain idle rather than operate them at a loss. The wisdom of this is now proven, as at a recent meeting of twenty of the largest manufacturers it was resolved to advance prices for eastern shipment, owing to the fact that the spring demand had increased beyond the supply.

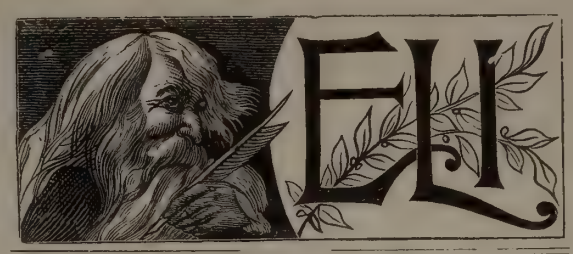
## EDITORIAL NOTES.

The bill proposed to be submitted to the Ontario legislature at its recent session, providing for the better sanitation and inspection of lumber camps, will not become law for another year at least. For some reason, probably known only to a few friends of the government, the measure was not introduced in the House. It is hinted that this step was the indirect effect of the invalidation of the statute compelling inspection of cattle at the expense of owners, inasmuch as it was intended by the act that lumbermen should bear the cost of inspection of camps and of procuring a physician and nurse in case of infectious diseases.

Apropos of our remarks in the last issue of The Lumberman regarding the necessity of uniform inspection rules for the purchase and sale of lumber, the report published in another column of a suit which was recently heard in the County Court at Toronto affords interesting reading. It was shown by the evidence that there was really no general understanding as to what constituted firsts and seconds in birch, and the contentions of the plaintiff and defendant differed widely. The decision declared that sap was not a defect. The learned judge was nonplussed at learning that the lumber business was conducted in such a manner, and suggested that the legislature should sanction some code of inspection rules which would remove the opportunities for law suits such as now exist, and which only serve to divert to the pockets of lawyers the profits which rightly belong to the lumber dealer. This and other similar suits which are fought out from time to time afford a strong argument in favor of some action being taken by lumbermen looking to the adoption of standard rules of inspection.

The Ontario government is apparently becoming convinced of the expediency of protecting from fire the unlicensed timber limits of the province, as we observe that at the last session of parliament, at the request of the Commissioner of Crown Lands, an appropriation of $3,000 was made for the employment of fire rangers for this purpose. It is gratifying that a step in this direction has been taken, yet we cannot but express regret that the amount was not larger, thus placing the department in a position to protect more efficiently an asset from which is derived annually a very large revenue. In the case of licensed limits, the expense of fire ranging is borne equally by the licensee and the government, while the latter would, of course, be compelled to bear the total cost of protecting unlicensed territory. The appropriation of $3,000 would, therefore, only provide protection for a very small section of country, leaving the balance to suffer destruction by fires such as have occurred in past years in many parts of the province, and which should have served as object lessons. Now that the government has shown itself to be in sympathy with the movement, however, we trust we may receive a much larger grant for this object at the next session of the legislature.

Saw mill owners in every part of Canada are asked to assist in making The Lumberman of greater interest to its readers by furnishing information regarding the condition of the lumber market. Particulars of sales of stock, estimated cut, current prices, etc., are solicited.



One of the latest industries to which my attention has been drawn is the collection of white pine seeds for sowing. I recently learned of a gentleman in Ontario who was devoting much of his time to this work, which he described as being very tedious and laborious. His method was to purchase the cones from the lumbermen in his vicinity. These were gathered in the fall of the year, the month of September being the best time, and threshed out by a flail in much the same manner as peas. The seeds were sold at fifty cents per pound, the principal market being in the United States.

* * *

Mr. E. W. Rathbun, the Deseronto lumber king, upon being interviewed, stated that Canadian lumbermen should not permit the United States to impose a duty on our lumber. "Within seven years," he said, "the American pine forests will be wiped out at the present rate of cutting. Then they will be as dependent on us for pine as they are for pulp wood now. Let the Canadian Government say: If you impose any duty at all upon our lumber, we will impose an export duty upon all logs, pine and pulp wood. When that fact is grasped by the Americans they will change their attitude." "There is another thing that the public have not realized," said Mr. Rathbun. "The timber limits of the country are passing into the hands of Americans who have no interest beyond clearing off the lumber. They bring in supplies free and American labor, and tow away the logs. They are protected against our competition in the lumber market by the duty of $1 or $2. That means that when they bid for the timber limits they have an advantage over Canadian bidders equal to the duty. We cannot compete against them, and every years sees fewer Canadian purchasers of timber limits and more Americans." Mr. Rathbun thinks that European capitalists will shortly establish paper mills in America, and under favorable circumstances they would locate in Canada.

* * *

A Montrealer interested in lumber, referring to the system of protection which he considers it preferable for Canada to adopt, recommends a little paternalism. He says: "I would have the government get reports from its Commissioner in England and from British consuls abroad as to lumber markets, and would have instructors travel among our smaller mill men to teach them how to saw for the foreign market. The government should advance to these small manufacturers 75 per cent. of the value of the lumber on board the vessel at the shipping port, after payment of insurance, and I would have the lumber sold for them, just as has been done in the cheese business—done so successfully that young Canada supplies 55 per cent. of the cheese used in Great Britain." The query whether a policy such as this would not meet with strong opposition, was answered thus: "At first, possibly. But when the public become educated to the fact that no sale for lumber means destruction to millions of dollars of our natural resources—that stagnation in this trade means starvation to tens of thousands of employees from Quebec to Port Arthur—that it means no freights for our railroads—they will favor the policy. Our small lumbermen need help and need it at once; for three years they have been lumbering at a loss. This policy would mean the manufacture of our logs into lumber in Canada. It means its transportation from Sault Ste. Marie and Georgian Bay, Toronto, the Bay of Quinte, Ottawa and all St. Lawrence ports on Canadian railroads or ships to the sea and to Europe. In fact, I think that if the government acts on these lines at this crisis, the McKinley Bill will do as much good as it did before when it was in force."

* * *

The season of rafting timber to Quebec for shipment across the Atlantic has now opened, and passengers enjoying an early summer tour down the St. Lawrence will pass a number of huge rafts, with their jolly crew, quietly floating along. Within the past fortnight a considerable quantity of timber has left Toronto, to which point it was brought by railroad from Ohio and Michigan. In former years all this timber was rafted at Toronto, but the risk of loss by storms on the lake is now avoided by taking the timber to the vicinity of Kingston by vessel, where it is made into rafts for floating to Quebec. This method is now adopted by most of the timber merchants. While the square timber trade is not by any means what it was years ago, when as much as twenty million cubic feet of white pine alone was exported from the St. Lawrence, and twenty firms were engaged therein, it is yet quite an important feature, and one which the average lumberman knows little about. Talking with Mr. Bickell, of McArthur Bros. & Co., the other day, he referred to the great change which had taken place in the timber trade of late years. "Less than twenty years ago," he said, "sailing vessels were employed almost altogether for carrying timber, but now very few of such found their way to Quebec, owing to the difficulty in securing a charter. The steamers were now built in such a manner as to take in a log 75 feet in length. A point in favor of the steamer was that the wood was landed at its destination in much better condition, being free from discoloration such as is likely to occur when shipped by a sailing vessel, which could only make about two trips a season, while a steamer would make half a dozen. The cost of insurance by steamers was also a mere trifle. During the summer months the rate was only one-quarter of one per cent., which was increased in the fall season." Mr. Bickell expressed the opinion that Quebec would continue to hold the timber trade, as Montreal did not afford the necessary cove and other accommodation. He hoped for the early extension of the Ottawa, Arnprior and Parry Sound Railway to the ancient city, which would be the means of restoring some of its old-time activity. He could well remember when as many as fifty vessels were built each year at the port of Quebec, affording employment to thousands of workmen. Now, owing to the general use of iron and steel, this trade had been diverted to the Clyde. Mr. Bickell goes to Quebec early in May, where he takes charge of the shipping of the timber for his company, and will remain there until the close of navigation.

# THE RETAILER AND Wood-Worker

## THE BUILDING OUTLOOK FOR 1897.

INFLUENCED by the general depression in business, the building trade in Canada has for some years been in a state of inactivity, and much below what might be expected in a young and vigorous country. As each year passed by, it was hoped that the worst had been encountered, yet the season of 1896 proved to be one of the least prosperous. The unsettled condition of the country politically, and the uncertainty with regard to the tariff both in Canada and the United States, had a depressing effect, and many buildings which would otherwise have been erected still remain in a embryo state until the action of the government is made known. The low rentals obtainable in many of the larger cities offered little inducement to speculators, and consequently a few office buildings constituted the major portion of construction. Thus the local demand for lumber has been reduced to a very fine point, and retail dealers have suffered in common with every other line of business in any way dependent upon building operations.

With the object of learning as far as possible the conditions likely to prevail in the building trades during the approaching season, letters were dispatched to architects in the different cities, asking their opinion of the outlook. The replies received, although pointing out that many projected works are yet in an unsettled state, and may or may not be proceeded with, afford some degree of encouragement. It is generally conceded that little change will be made in the tariff by the government, and the official announcement of this fact will be certain to stimulate building operations and restore confidence to business in general.

In Toronto, the new building at the northwest corner of Yonge and King streets is perhaps the largest yet arranged for; the plans are being prepared by Messrs. Darling & Pearson. A large hotel and several other buildings of some prominence are spoken of, but are not yet regarded as certainties. The renovation and remodelling of office buildings is likely to account for a considerable expenditure, as the owners will be compelled to improve their properties in order to retain their tenants. Montreal architects report the season to be opening up somewhat brighter than last year, with several undertakings hanging in the balance. The towns adjacent to Montreal are apparently more prosperous. In the city of Ottawa the prospects for building operations are decidedly encouraging, a number of recent fires having assisted in this direction. The rebuilding of the departmental block and the new building of the C. Ross Company are the most important works now under construction. The addition to the Protestant hospital and a proposed opera house will reach in value $100,000, while other buildings equally costly are either under way or contemplated. In western Ontario architects do not take a discouraging view of the future. A $60,000 hospital is talked of at London, and two buildings of good size will be erected in Hamilton. The bulk of the work in the latter city, however, will consist of residences and alterations to existing buildings. In the vicinity of Stratford a fair amount of building is reported, and at Owen Sound elevator and flour shed extensions comprise the main work. There are a large number of buildings commenced or projected at Rat Portage and other mining towns in northwestern Ontario, and in these will be consumed a large amount of lumber, the structures being mostly of frame.

Very few large buildings are likely to be erected this year in Manitoba and British Columbia. A large university building will probably be built at Winnipeg, at a cost of $60,000. In the Pacific coast province the cheaper class of buildings promise to predominate, particularly in the vicinity of mining operations. From the maritime provinces favorable reports are received, the work now in sight at St. John being greater in extent than for any season for the past ten years.

No small amount of material and labor promises to be utilized in 1897 by government work, the appropriation made by the Dominion parliament for canals alone reaching five million dollars. Comparing the situation with past years, we think there is a fair prospect of an improvement in building during the present season. The low price of lumber and other building materials affords a splendid opportunity for speculators to erect good buildings at a very low cost, and it is reasonable to suppose that this fact will be given due consideration by the wise investor, and that projected works will be proceeded with during the present season.

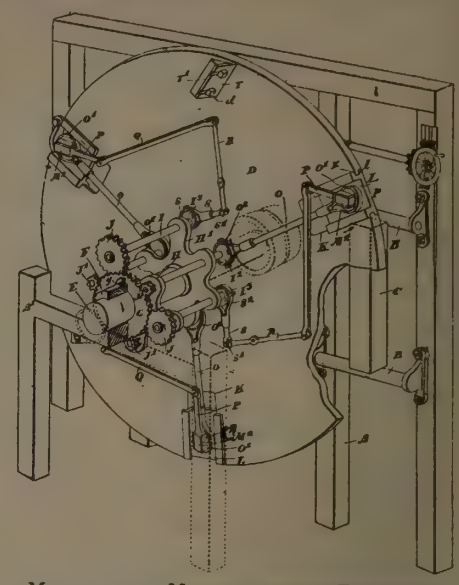
---

An English exchange states that furniture manufacturers of that country, especially the chair trades, are importing large quantities of American birch timber.

The story is told how a dry kiln failed to give satisfaction. When first built the thermometer showed 200 to 210 degrees of heat in all parts of the kiln, but this temperature ran down gradually until only 140 to 160 degrees could be obtained. Placing a recording thermometer inside the kiln and a recording gauge on the steam supply pipe resulted in the discovery that the fireman was in the habit of closing the steam admission valve in order to favor his boiler. After the fireman was duly warned, and the steam coil, which was badly clogged with grease and dirt, had been cleaned out, the temperature went up to the proper degree again.

## RECENT WOOD-WORKING PATENTS.

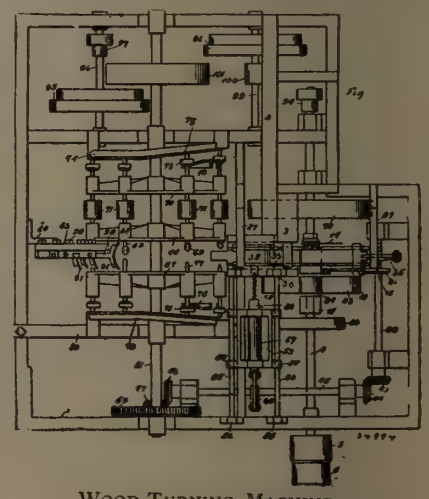
THE following patents for wood-working machinery have recently been granted to Canadian inventors:



MACHINE FOR MANUFACTURING EXCELSIOR.

Patentee: H. A. Rider, Toronto, granted 8th February, 1897; 6 years.

Claim.—In a machine for making excelsior packing, in combination a rotating disc secured on an adjustable shaft, sets of scoring knives equidistant and supported in radial guideways, and means for causing reciprocating movement to knives to cause them to travel in a straight line over the chords of the arcs of a concentric circle, and to simultaneously keep them parallel with the chords of each arc from end to end as they rotate. In combination with a rotating disc, supporting blocks peripherially equidistant and provided with side grooves, substantially radial recesses with tongues to fit into the grooves, cylindrical discs provided with a plurality of disc-shaped abutting scoring knives, suitably journalled and having cylindrical shanks extending through corresponding holes in supporting blocks, means for reciprocating the blocks, supplemental shanks to the disc and arms secured to the supplemental shanks, with connecting rods, eccentrics, spindles, gear pinions, spur wheel, etc., etc.



WOOD-TURNING MACHINE.

Patentee: Wm. T. Jones, New Westminster, B. C., granted 15th February, 1897; 6 years.

Claim.—A wood-turning machine, comprising a series of fixed cutters, a rotary block, means for rotating the blocks relatively to the carrier, saw for severing the block from the strip, and reciprocating frame for holding and operating a boring tool. The combination with a saw, a boring device, and a block carrier, of a block shifter comprising a reciprocating carriage, a fulcrumed lever having a link connection with said carriage, an eccentric shaft, a finger extended radially from said eccentric shaft, and pins arranged at opposite sides of a slot opening in said lever and adapted to be engaged successively by the finger on the eccentric shaft, the pivotal point of said lever being forward of a vertical line through the axis of the eccentric shaft, etc.

H. W. Chamberlain, Ottawa, sash and frame.

Wandell P. Jones, Woodstock, N. B., clapboard, having a tongue on one edge and a rabbet on the other edge, and which, when laid on the wall, exactly resembles the clapboard in common use.

D. M. Macpherson, Lancaster, Ont., box, having detachable cover, with notches formed in its edges and rotatable holdfasts set in the body of the box, projecting from the upper edge thereof through said notches and having their ends offset to engage said cover, etc.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. III. TORONTO, ONT., APRIL 28, 1897 No. 17.

## CANADA LUMBERMAN

PUBLISHED BY

C. H. MORTIMER

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

**Lumbermen visiting Toronto are invited to call at the office of the CANADA LUMBERMAN. We shall have pleasure in giving them any information desired.**

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.

CEDAR POSTS, ETC. APPLY TO S. R. BEETON, Anten Mills, Ont.

FOR SALE.

FOR HEMLOCK DIMENSION STOCK AND bill stuff, write to REID BROS., Hepworth Station, Ont.

FOR SALE.

100,000 FEET 1 INCH MILL RUN BASSwood, and some Birch. CRAIG & AUSTIN, Kinmount, Ont.

WANTED.

3 CARS OF 2" No. 1 AND 2 AND COMMON Soft Elm. Address, BUFFALO HARDWOOD LUMBER CO., Buffalo, N. Y.

FOR SALE—IMMEDIATELY.

PLANING FACTORY, GOOD BUSINESS, IN perfect running order; also run of chop stones, water power. Good reasons for selling. Address Box 236, Flesherton, Ont.

### BUSINESS NOTES.

W. Donough, lumber jobber, Grattan township, has assigned to T H. Grant.

George Wilson, planing mill, St. Catharines, Ont., is reported to have assigned.

F. & F. Corbeil, lumber merchants, Ferries township, have assigned to A. E. Landrian.

J. R. Vanfleet, lumber, Brantford, Ont., has assigned to A. K. Bunnell. Creditors will meet on the 29th inst.

The failure is reported of Fitch & Aldrich, sash and door manufacturers, Elmira, N. Y. Tonawanda dealers are said to be creditors to the amount of $40,000.

### CURRENT TRADE CONDITIONS.

#### ONTARIO

The reports which come to hand from mills throughout the province tell of more activity in the lumber business. Stocks which were sold in the early spring for first open water are now being shipped out, and United States dealers are buying more freely in anticipation of the duty. Manufacturers appear to be more hopeful, and are holding stock at firm prices, in the belief that the worst has been passed. In the Ottawa district shipping is quite brisk, the entire fleet of the Ottawa Transportation Company being employed loading lumber. The Canada Atlantic Railway also reports a steady call for cars for the timber trade. Several of the mills have commenced sawing, including those of W. C. Edwards & Co., Bronsons & Weston, Hawkesbury Lumber Co., Ottawa Lumber Company, J. R. Booth, and the McLaren Estate. Good lumber is constantly asked for, while there is little demand for the common grades. Culls have been in fair request, also pine and hemlock bill timber. Of hemlock some fair sales are reported for local work. Cedar also meets with some favor. Comparatively, hardwoods are in greater demand than pine. Sales have been made at better prices than last year, and stocks are smaller. Elm, maple and oak are the leaders, and in some sections these woods are commanding advanced prices. Wholesale dealers in Toronto report business fair, with prospects brightening.

#### QUEBEC AND NEW BRUNSWICK.

Preparations for shipping are now engaging the attention of the shipping houses at Montreal and Quebec, where indications give promise of a busy season. Nearly everything suitable for the British market has been contracted for, at prices equal to or in advance of last year's quotations. The stocks of timber at the coves in Quebec are small, and are given in another column. The sale of about one thousand miles of government timber limits, which is being held to-day at the Crown Lands Department, is attracting some attention. A report of the result will be given in our next issue. New Brunswick and Nova Scotia spruce continues in active demand, and the requirement of the British market has placed mannfacturers practically in an independent position so far as the United States is concerned. Such cargoes as have been sent to American ports have realized fair prices, the average being about $12, while the same stock last year sold at $10.50. The cedar shingle trade is active, and large quantities of stock have been shipped from provincial mills across the border.

#### MANITOBA AND BRITISH COLUMBIA.

In the British Columbia market very little change has taken place. The mills are busily engaged on export and local orders, and in some sections it is impossible to obtain the lumber as required for building purposes. The situation as a whole presents an encouraging outlook. Weather conditions in Manitoba and the North-west account for the depression in the lumber trade at the present time. Recent floods have paralyzed business in some parts, but as soon as the waters subside there is certain to be a brisk demand for lumber for repairs. In the city of Winnipeg more building is projected than last year.

#### UNITED STATES.

The lumber trade of the United States has not yet returned to normal conditions, and generally there is less business doing than usual at this season of the year, when the spring demand should present itself. Dealers are somewhat backward about making contracts, and only purchase when there is a fair prospect of turning over the stock. The holdings by retail and wholesale dealers have become reduced to a very low point, and the season's business can only be carried on by a replenishment of their stocks at an early date. There is a buoyant feeling shown in the west, and agricultural improvements are looked to as likely to consume a fair quantity of lumber. In the northern states the mills are preparing for the season's work, and to make piling room are shipping some stock to wholesale points. Wholesale dealers at Buffalo and Tonawanda have experienced somewhat of a revival of demand, especially for white pine for shipment to the east. Barn boards, siding and good thick boards are becoming scarce, in comparison with the stocks which have been held of late. There is also a short supply of 5/4 and 2-inch fine common. A better business is reported from Philadelphia and New York, and at the latter city spruce lumber and lath are strong. Orders are coming in freely for hardwoods, and the requests for immediate shipment show that stocks have been allowed to run low. Oak leads in the requirement, but prices are below those ruling in more prosperous years. Birch has taken on new life, and several manufacturers are reported to have made large sales at fair prices. Basswood, poplar and rock elm are in moderate request.

#### FOREIGN.

The demand in Great Britain for wood goods generally continues fair, and contracting on that side during the past winter has been exceedingly heavy, being fully one-half greater than last year. The temporary structures to be erected in connection with the Jubilee celebration have materially stimulated the demand for the lower grades of deals, particularly pine and spruce culls and 4th quality, and business throughout the summer is certain to be brisk. The first-open-water stocks have all been sold, and offerings are now confined to late arrivals, but buyers do not feel disposed to contract so far in advance. On the west coast pine and spruce are gaining ground, the number of inquiries increasing each week. At Hull shippers are holding out for high prices. The arrivals at the Clyde continue light, and stocks have been freely sold. The consumption of St. John spruce deals has absorbed the import as well as reduced the yarded stock. High prices are obtainable for 7 x 3 in. and 8 x 3 in. spruce. Deals are in favor at London, especially large lines of 2½ x 7.

Shippers have this year been somewhat disappointed in the South American market, which so far has been very dull. Several manufacturers have considerable stock which was cut for that market on their hands, which they find difficult to dispose of. The Australian and South African markets are improving.

### STOCKS AND PRICES.

#### CANADA.

A couple of American boats are loading lumber at Penetanguishene, Ont.

Three large schooners are loading lumber at the mill at Chemainus, B. C., for export.

The Rathbun Company is shipping large quantities of shingles and ties from Lindsay, Ont.

Nearly 8,000,000 feet of lumber were shipped from St. John, N. B., to British ports last week.

Alfred Dickie, of Lower Stewiake, N. S., has 10,000,000 feet of logs ready to be floated to his mill.

The steamer Coquet cleared from Parrsboro, N. S., last week, for Garston, with 1,036 standards of deals.

John Kilburn, of Kingsclear, N. B., has 250 men at the headwaters of the river waiting to commence stream driving.

John Carew, of Lindsay, Ont., has 20,000 pieces of timber in his Gull river drive and 5,000 pieces in the Burnt river waters.

Thomas Mackay, of Ottawa, is reported to have sold to W. C. Edwards, M. P., of Rockland, a quantity of board timber valued at $40,000.

A quantity of logs are held at Georgian Bay points, for which the owners are asking $11 per thousand feet. There is said to be very little demand.

The C. Beck Mfg. Co., of Penetanguishene, Ont., are shipping 2,000,000 feet of hemlock and mixed grades of pine. This stock was sold some weeks ago.

The Spanish steamer Santanderino will load at St. John, N. B., for Liverpool. Her cargo will consist of timber from Jarvis Wilson and deals shipped by W. M. Mackay.

The Ottawa Transportation Co., of Ottawa, have an exceptionally large number of barges loading at the different mills at Ottawa, Hull, Hawkesbury, Calumet, etc., for Quebec and Montreal,

and as the quantity of lumber to be moved for first open water shipment is very large, a scarcity of barges is among the probabilities.

The Calvin Co. dispatched their first raft of the season from Garden Island, Ont., on the 20th inst. This should reach Quebec, with favorable weather, about the first week in May.

Carew & McDonald, of Lindsay, Ont., have shipped over 70 car loads of rock elm blocks to the American market. These blocks are used for the manufacture of harness hames.

The city of Winnipeg invites tenders until May 5th for supplying from 500,000 to 1,250,000 feet of pine lumber. Tenders are to be addressed to H. Wilson, Chairman Committee on Works.

The steel barge Seguin, owned by the Parry Sound Lumber Company, is loading a cargo of lumber at the Conger Lumber Co.'s docks at Parry Sound for Tonawanda. She will load from 900,000 to 950,000 feet.

Two and one-half million feet of pine are being supplied for the C. P. R. elevator at Owen Sound by John Harrison and Maitland, Rixon & Co. The latter firm have in stock 3,000,000 feet of pine, and 1,000,000 feet each of hemlock and cedar.

The steamships "Eleanor" and "Cameo" are daily expected at Quebec. Both these boats will load a cargo of deals and timber, the shippers being Dobell, Beckett & Co. These will probably be the first ocean steamers to arrive in port this season.

For the week ended April 17 there cleared from St. John, N. B., for the United States, 1,500,000 feet of long lumber, 5,715,060 cedar shingles and 2,235,000 laths. To British ports there were shipped 5,315,000 feet of deals, battens and boards.

The Scott timber limits were sold at Peterboro', Ont., last week to the Dickson Company, of that town, for $298,200. This company originally owned the limits, which were sold a few years ago to J. W. Howry & Sons, who took therefrom some 10,000,000 feet of timber.

The Rathbun Company are this season driving all of Gilmour & Co.'s timber on the Trent water and its tributaries to Trenton. Their men are now at work driving on Square river, Deer river and Beaver creek, of the Trent waters, and on the Madawaska river and its tributaries.

The Tourville Lumber Mills Company, who have large mills at both Louiseville, on the north shore of the St. Lawrence, and Pierreville, on the south shore, in Quebec, have sold their 1897 cut of spruce and pine deals to Dobell, Beckett & Co., of Quebec. These deals are usually loaded on ships and steamers at Pierreville anchorage, and are shipped direct to United Kingdom.

The different timber coves along the river front at Quebec are getting ready to resume operations for the season. They start spring business with stocks much below the previous year. The quantities on hand are about 2,000,000 feet of white pine, 82,000 feet red pine, 637,000 feet oak, 78,000 feet ash, 124,000 feet merchantable pine and 524,000 feet spruce deals, 70,000 feet culls, 7,500,000 feet of spruce plank and 104,000 feet of hardwood plank, besides small lots of other woods.

FOREIGN.

A. W. Wright & Co., of Saginaw, Mich., will not operate their mill this season.

The stock of shingles at Buffalo is small, and such dealers as have a stock are meeting with ready sale.

It is estimated that 20,000,000 feet of logs will be taken to Bay City, Mich., this season from the David Ward limits.

An order for 100,000 feet of inch beech was recently given to a dealer in Bradford, Pa., for shipment to Jamestown, N. Y.

W. H. Gilbert, of Saginaw, Mich., has purchased 10,000,000 feet of logs from A. A. Bigelow & Co., of Chicago. The timber is in Wisconsin.

Since the opening of navigation there has been shipped from Alpena, Mich., 13,061,000 feet of lumber, 870,000 shingles and 19,600 pieces of cedar.

Hemlock is in better demand at New York, and some good sales are reported, including one of 1,500,000 feet. At Boston this wood is also improving.

Estimates of the Penobscot and Kennebec cuts, in Maine, place their combined totals at 300,000,000 feet. A large percentage of spruce will be required for pulp mills.

Bliss & Van Auken, of Saginaw, Mich., will shortly commence lumbering operations in the vicinity of Vienna, Mich., which, when completed, will clean up their pine in that district.

It is reported that Messrs. Swan Bros., wholesale lumber dealers, who will handle the cut of lumber made at Fenelon Falls under the name of the Bank of Toronto, have decided to locate at Tonawanda.

At Saginaw, Mich., log run is held at $14 and upwards, box at $8.50 to $9, and bill stuff at $8 to $9. White pine shingles are quoted at $1.50 to $2.50, with cedar 20 cents below. The shingle output on the Saginaw river is likely to be less than last season.

At Minneapolis, Minn., 12-inch No. 3 and 10-inch No. 2 12-foot stuff are in short supply. Very little dimension is obtainable, and shingles are scarce, both pine and cedar. Pacific coast shingles are now selling at $1.85. First and second basswood sells at $15 to $17, shipping culls, $7 to $8; box-boards, 12-inch and up, are worth $10 to $20.

A large sale of lumber was recently effected in Marinette, Wis. The H. Nitbeck Company sold to Perley, Low & Co., of Chicago, the season's cut of white pine, amounting to 35,000,000 feet. This stock has in former years been handled by Holland, Graves & Montgomery, of Buffalo. The consideration is given as $400,000, and it is intended to cut the lumber for the eastern market.

## THE COOPERAGE STOCK MARKET.

The Sutherland, Innes Co., Chatham, Ont., write as follows regarding the condition of the cooperage stock market:

It is a long time since the cooperage stock market was in such good condition as it is at the present; the demand is far in excess of the supply for all classes of goods, and it is only a question now of cooperage stock manufacturers hustling to get out all the stock they can so as to be able to fill the orders which are pouring into them by every mail. It does not seem to be a question of price with the coopers, millers and other consumers, but a question of getting stock.

From present appearances, the scarcity is going to continue till the end of June at the very earliest, as while a little stock has already come in of this year's cut, the inclement weather has prevented the staves getting dry, and as far as we can see there will be little or no stock of this year's cut on the market before the 1st of June, and it will take all June for manufacturers to catch up with their orders.

There has been a little flurry in the United States on account of the Dingley Bill, which proposes to put a duty of 10 per cent. on staves, and if this duty goes into effect it will be a case of the consumers in the United States paying the duty for at least this year, as there will not be nearly enough stock manufactured in the United States to fill the wants of the trade there. This constant occurrence of disturbing elements every election time in the United States has made manufacturers and contractors in other countries very dubious about accepting any orders from that country, and it has been proposed (and we believe will be carried into effect), that all contracts made with users in the United States should be subject to tariff changes, the consumer in every case paying the duty, if any, which may be put on by the American Congress.

We are informed by our agents in Europe and other countries that it is more than likely that the government there will retaliate by putting a duty on American forest products in all cases where duty is put on goods of the manufacture of the countries to which the Ameriean forest products are exported. As we are very heavy manufacturers of cooperage stock in the United States as well as in Canada, we have felt this threat of retaliation quite a little, and some of our largest consumers of cooperage stock on the continent of Europe have stopped shipments going forward until the tariff matters are settled, the consequence being that in the tight barrel stock in the south there has been a slight lull.

## CANADIAN GOODS IN SCOTLAND.

Allison, Cousland & Co., Glasgow, Scotland, held an auction sale of deals and timber on the 14th inst., at which the following prices were realized:

| | | Per cubic ft. |
|---|---|---|
| 1st Quebec deals | 12/13x12/23x3 | 2s 9d |
| " " | 11/16x 11 x3 | 2s 4d |
| " " | 9/10x 11 x3 | 2s 2d |
| " " | 16 x 7/10x3 | 2s 2d |
| " " | 13 x 7 | 2s |
| " " | 10/11x 7/10x3 | 1s 11d |
| " " | 9 x 7/8 x3 | 1s 10½d |
| 1st Quebec scantlings | 9/13x 3/6 x3 | 1s 6½d |
| 1st Quebec pine boards | 12/16x 8/20x1½ | 2s ½d |
| 2nd " " | 12/16x 8/20x1½ | 1s 3d |
| " " deals | 14/16x12/20x3 | 2s 2½d |
| " " " | 9/10x 11 x3 | 1s 6d |
| " " " | 9/11x 7/10x3 | 1s 5d |
| " " " | 13 x 7/8 x3 | 1s 2d |
| 4th Quebec pine deals | 12/16x12/ 0x3 | 11d |
| " " " | 13/16x 11 x3 | 10½d |
| " " " | 7/10 x3 | 10d |
| " " " | 9/16x 7/8 x3 | 9d |
| Quebec red pine deals | 16/21x 11 x3 | 1s 1½d |
| " " " | 12/13x 11 x3 | 10¼d |
| Bathurst spruce deals | 16/22x 11 x3 | 12½d |
| " " | 12 x 10 x3 | 11¾d |
| " " | 9/10x 10 x3 | 10¾d |
| " " | 11 x 8 x3 | 10½d |
| " " | 9 x 8 x3 | 10d |
| " " | 16/22x 7 x3 | 10½d |
| " " | 9 x 7 x3 | 10d |
| St. John spruce deals | 18/30x 11 x3 | 12¾d |
| " " | 9/11x 11 x3 | 11d |
| " " | 15/15x 9 x3 | 11d |
| " " | 10/14x 9 x3 | 10½d |

A large quantity of 1st ends, 2 to 5 ft. long by 3, at 1s ½d to 1s 9½d, and 2nd quality, 2/5 ft. x 4/19 x3, at 9d to 11d.

## SHIPPING MATTERS.

A steamer has been chartered from Quebec to Roun, deals, 46s 3d.

The bark Avoca will load deals at West Bay for w. c. England at 41s 3d.

The steamer Langham has been chartered to load deals at St. John, N. B., for Bristol Channel at 39s.

Steamer Coquet finished loading deals at West Bay last week for the U. K. Two other barks are now loading there.

The steamer City of Wakefield, 1937 tons, has been fixed to load deals at Grindstone Island for w. c. England at 40s.

Navigation is now open in the port of Quebec, and the channel is clear between that port and Montreal. The shipping booms at the different coves, however, are still full of ice, and it will be a week or ten days before these are free and in a condition to permit of putting timber in shipping order and shipping same.

The following charters are reported: A bark, 274 tons, Richibucto to Rhyl, deals, 52s 6d; three barks, 247, 257 and 279 tons, Richibucto to United Kingdom, deals, 51s 3d; bark, 794 tons, same, 50s; two barks, 307 and 289 tons, Richibucto to Belfast, deals, 48s 9d and 51s 3d respectively; bark, 216 tons, Richibucto to Preston, deals, 51s 3d; bark Angola, West Bay to w. c. England, 41s 3d; ship Ellen A. Reed, Herring Cove to Liverpool, timber and deals, 19s and 40s respectively.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft., (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Arnprior to Montreal, $1.50 per M ft.; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.: Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. To New York for boat delivery, lots 50 M ft. and over, $2.50 per M ft., under 50 M feet $3.25 per M ft. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts per 100 lbs. Boat delivery, lots 50 M ft, and over $3.00 per M ft., under 50 M ft. $3.75 per M ft Parry Sound. $4.00 per M feet; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghamton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2 45 and $2.60 respectively. Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Spragge, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Central Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods.

## NOTES FROM NOVA SCOTIA MILLS.

(Special Correspondence of the CANADA LUMBERMAN.)

IN nearly all lines of commercial enterprise there is a period which is termed "between seasons," and the month of April is that period for the maritime province lumbermen, especially those in Nova Scotia and the eastern part of New Brunswick, where winter sawing is carried on. The winter mills being mostly portable, the owners plan to finish their cut in the woods and get moved out while the roads are passable, and set up in places where logs have been piled for summer sawing. The absence of the shrill shriek of the mill whistle and the "hum" of the rapidly revolving circular saw attests that the "between period" season is here.

The large stationary saw mills are undergoing the usual spring overhauling, so as to be in perfect order when the drives come in. The output of logs generally, owing to the very favorable winter and the stimulus given by an advance in prices in the English markets, has been such that the mills will be fully employed converting the logs into such specifications as the markets call for. This fact tends to inspire all lines of business into greater activity, as there is no business in the maritime provinces that causes the "circulating medium" to flow so freely and directly among all classes of the people as the lumber business.

The Rhodes, Curry Co., Ltd., Amherst, N. S., have three million feet of logs at their mill at Athol, some of which they saw into deals, but the greater part is for use in their building, house furnishing and car building trade. In their mill they have a circular saw, patent edger, lath and shingle machine and planer. Mr. Clarence McCabe is the superintendent. The company also buy a large quantity of sawn lumber outside, which is finished in their large factory at Amherst and shipped to all parts of Nova Scotia and New Brunswick, where they contract to build anything from a modest dwelling to a fully equipped railway station. They also build railway and street cars; a sample of the latter can be seen in Halifax in the new electric railway system. The City Hall, Halifax, Grand Hotel, Yarmouth, and the Intercolonial Railway station, St. John, N. B., besides others too numerous to mention, are monuments of their ability and enterprise as builders.

Curran Bros., Amherst, will saw about one and a half million feet of spruce into deals and building timber.

Kelley Bros., River Hebert, have three million feet of spruce for deals to drive to their steam mill.

Pugsley Bros. & Co. purchased the River Hebert mill and timber property of Young Bros. & Co., Ltd., last year, and are getting out three and a half million feet. Formerly the lumber from Kelley Bros.' and Young Bros.' mills was loaded into scows and floated about six miles to the vessel's side, but Messrs. Pugsley and Kelley have in view the project of building a water sluice and doing away with the scows.

Rufus F. Christie, West River Hebert, has thoroughly overhauled his mill during the past winter, having put in a large engine and new machinery. He will saw about one million feet of deals and boards, as well as some laths and shingles.

E. & R. A. Christie, River Hebert, put a large portable saw mill to work in their timber lands last fall, and have sawn and hauled to shipping point at Two Rivers one million feet of deals.

B. B. Barnhill, Two Rivers, lost his large steam saw mill by fire last fall. He then purchased a new portable mill and sawed through the winter, and about the first of March last had the misfortune to have it burned also. Not to be daunted, however, he began rebuilding at once, and is now sawing again.

Harkness & Sutherland, Maccan, have two portable mills, in which they will saw about two and a half million feet of deals during the winter and spring.

The Londonderry Iron Co., Ltd., Acadia Mines, have a large quantity of spruce on their lands, and have had several mills sawing during the winter. There will be in the vicinity of three million feet of spruce and hardwood deals shipped from their property.

C. B. Lindsay, Belmont, has two mills sawing on a long term contract, and is turning out deals rapidly. T. G. McMullen & Co., Truro, handle the cut.

Henry Hunter, Westchester, will ship one million feet of deals cut in his portable mill on Westchester Mountain.

The Nova Scotia Lumber Co., of Sherbrooke, will cut about eight million feet on the St. Mary river. Their property was formerly owned by James Miller & Co., St. John. The new company are principally the members of the Shulee Lumber Company. They bought the Economy timber lands from James Miller & Co. as well, but are not lumbering it this year. Messrs. John Seaman and Gideon Prescott, members of the company, are in charge of the operations at Sherbrooke.

## NEW BRUNSWICK LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

THE St. John saw mills have about all started up, with one or two exceptions, and are just getting the men and machinery warmed up and tested with the logs that laid over winter in the booms, and when the new logs come in they will be ready to slaughter them in good shape. During the past year or two, since the advent of the band saw, the mill owners of St. John have been looking into the new devices for handling logs, and where they have met their views have adopted them, and when repairing and changing have put them in practice, with the result that all the mills now have some of the modern appliances that suit their conditions. Formerly the St. John mills were specially adapted for sawing deals. The price of deals until a few years ago was low, and they turned their attention to the American market, but gang saws were not so well adapted for American specifications as for deals, so some of them put in circular saws, and later the band saw came along, which filled the bill very well, with the result that most of the mills are now fitted up for sawing advantageously for either market.

Hilyard Bros. have put in a continuous log sluice, log kickers, etc., have one gang and shingle saw, with a capacity of 60,000 feet per day, besides laths, pickets and boxes. James Hamilton has one band saw complete, built by the Waterous Company, also lath machine and planer. Their capacity is 45,000 to 50,000 feet per day. J. R. Warner & Co. have one gang and circular, lath and box board machines, capacity 60,000 feet per day. They have also a slab slasher for making short wood. The equipment of Purves & Murchie, Carleton, consists of one gang and circular—the latter put in this winter. This mill was rebuilt last year, having been burned, and started up with gang only. It also has lath machines and planer; present capacity 75,000 feet per day. W. H. Murray has one gang and steam feed circular, lath and stave machinery, the capacity being 90,000 feet daily. A. Cushing & Co. have two band saws and Wilkins gang, with all the latest improvements. The capacity is 125,000 feet per day. Miller & Woodman have two gangs and Mulay saw, lath and shook making machines. They put in a continuous haul-up with modern bed during the winter, with steam jump up cutting-off saw, and now have a capacity of 125,000 feet per day. This firm also have a well equipped shingle mill running thirteen shingle machines. Stetson, Cutler & Co. have two mills, one being at Pleasant Point, of which L. H. Jordan is superintendent, having one band mill and six shingle machines, with lath, box and clapboard machines. Capacity of the band mill, 60,000 feet per day. At Indiantown they have one gang and one band mill, also lath, box and barrel heading machines. Capacity 100,000 feet per day. Charles Miller has one band mill, eight shingle machines and lath machines and planer; daily capacity of band mill 60,000 feet. Mr. Miller also carries on lime burning, utilizing the refuse of the mill for fuel for the lime kilns. The band mill was put in new last year, and a considerable addition was made to the mill. George E. Barnhill has one gang, lath, stave and heading machine; daily capacity about 60,000 feet. William Rivers, superintendent. S. T. King & Sons have one gang and steam feed circular, with lath and shingle machines; capacity about 90,000 feet per day. Mr. Horace King is superintendent. Randolph & Baker have two gangs, with lath, box, stave and heading machines; capacity about 120,000 feet per day. This firm also have lime kilns. John Galey & Co., Carleton, have one circular, also box board machines. Box making is their principal business, large quantities of onion box slats being manufactured for Bermuda. The working mill hours in St. John are nine hours per day, which lowers the capacity of the mills considerably.

John Dewar & Son, St. George, will get two and a half million feet to their steam mill to be sawn into deals chiefly. They also run a large general store in St. George.

The lumber business at St. Stephen and Calais is very quiet this spring. Compared with other years only a small amount of lumber has been taken out. F. H. Todd & Sons are getting only three to four million feet, where formerly they have had 30,000,000 feet in one season. H. F. Eaton & Sons have about the same quantity at St. Stephen, but have eight million feet to drive down the St. John river to St. John, taken from their lumber lands in Quebec.

Hale & Murchie, Fredericton, are getting out six million feet on the Tobique river. They are building a furnace to burn the refuse, which will be about 120 feet high and 20" inside diameter. Mr. A. H. Hale is the superintendent and Mr. James Rankin mill foreman. Donald Fraser & Sons are getting eight million feet to be sawn in their mill at Fredericton, and will also saw a considerable quantity at their River Dechute mill. They also saw clapboards and shingles at both mills. They have sold their season's cut to A. Gibson & Sons. Their logs come down the Tobique river. R. A. Estey will saw about three and a half million feet in his steam mill at the same place, which also come from the Tobique. Mr. Estey saws a lot of dimension lumber for local trade, and runs two shingle machines.

A. Gibson & Sons get their supply of logs for their Marysville mills up the Nashwaak river, and will have about forty million feet this year. They also saw about ten million feet at their Blackville mills, situated on the Canada Eastern Railway.

The Morrison mill at Fredericton, owned by James Murchie & Sons, Calais, is operated by John A. Morrison. They saw shingles exclusively. The mill is the largest of its kind, having about twenty shingle machines in operation. The cedar logs come from the head waters of the St. John river in the state of Maine. James Murchie & Sons operate mills at Deer Lake, Benton and Edmundston, in Canada, besides a large mill at Calais, making a total cut of eight to ten million feet, which they ship principally to the American markets. They also saw large quantities of shingles at their Edmundston mills, the logs coming down the Madawaska river, Mr. George A. Murchie having charge of the latter mill, and Mr. Theodore Murchie of the Deer Lake and Benton mills.

Fred Moore & Sons, Woodstock, have purchased the old Sawyer mill and equipped it with a first-class circular, in which they intend cutting about two and a half million feet, mostly for the American market. The logs come down the Meduxnekeag river. They are also putting in three shingle machines to saw the cedar into shingles. James Hayden & Son will saw about two million feet in their mill at Woodstock. They also make doors and sashes and other house materials, shingles and clapboards, and propose also going into the manufacture of pails, tubs, washboards and other lines of like nature. Mr. Albert Hayden is the manager of the business.

Robert McElroy, Grafton, saws about three quarters of a million feet, largely for the local trade. James T. Car has a nice circular mill on the Fredericton branch of the C. P. R., where he saws about one and a half million feet of spruce, birch and hemlock.

A. H. Sawyer, of Calais, Me., has a fine gang mill at Hartland, and has about five million feet ready to stream drive, some of which will be sawn into deals and rafted to Fredericton for the British market; the balance will be sawn into American specifications and shipped by C.P.R. to St. Stephen, thence by schooner to market.

George W. Upham, Perth, has a circular mill with lath mill, and intends sawing about three million feet of spruce, which he is now getting out from the Tobique river.

James McNair, Arthurette, has a saw mill in which he will saw one million feet. The lumber will be shipped on the Tobique Valley railroad, which is about being taken over by the C. P. R. Mr. McNair also logs extensively for some of the large mill owners in St. John, and has the contract for driving the corporation logs on the Tobique river to the St. John river.

James Burgess & Sons have a fine water power saw and shingle mill at Grand Falls, on Little river. The mill is only a few yards from the Grand Fall on the St. John river. They will saw about one million feet of logs and run four shingle machines, sawing cedar shingles besides.

The Stevens Lumber Co., Salmon River, have a finely equipped saw and shingle mill, circular saw, lath machines and ten shingle machines. Their lumber, lath and shingles are taken in scows down to the St. John river, about four miles, then hauled to Ortenville station, on the C. P. R., and shipped to market, nearly all going to the United States.

The prospect for getting the logs out of the brooks in time to reach the main river are good. There is from two to three feet of snow in the woods yet, which, with the rains pretty sure to come, ought to make very favorable river driving.

W. J. P.

## OTTAWA LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.

GEORGIAN BAY DEPUTATION.

THE city has of late been beseiged with deputations, each seeking some measure of relief from the government. One of the most important came from the Georgian Bay district, and was composed of a number of persons representing the lumber industries of that vicinity, among whom were Messrs. H. L. Lovering, Coldwater; A. L. Vick, Orillia; P. H. Spohn, A. Tessier and T. Payette, Penetang; C. E. Newton, Victoria Harbor, and many others. The deputation was introduced to the Minister of Finance by W. H. Bennett, M. P., and a resolution was presented providing that in the event of a duty of more than $1 per thousand feet on white pine lumber being imposed by any country, then the export of white pine saw logs from Canada be absolutely prohibited. Mr. Fielding in his reply stated that the government fully appreciated the importance of the question, and their requests would receive careful consideration.

FAVOR RETALIATORY LEGISLATION.

Lumbermen in the Ottawa valley have at last recognized the necessity of taking steps to protect their interests, and have declared themselves in favor of retaliatory legislation. An important meeting of persons engaged in the lumber trade was held at the Russell House last week, when the Dingley bill was thoroughly discussed. Mr. Allan Gilmour presided, and there were present Messrs. Alex. Fraser; J. R. Booth; W. C. Edwards, M. P., representing W. C. Edwards & Co., Rockland, and the Canada Lumber Co., Carleton Place; Thos. Mackie, M. P.; E. C. Whitney, St. Anthony Lumber Co.; J. B. Klock, M. P., of R. H. Klock & Co.; Frank Bronson and Levi Crannell, of the Bronsons & Weston Lumber Co.; Peter Whelan, Sheppard & Morse Lumber Co.; E. W. Rathbun; J. Gillies, of Gillies Bros., Braeside; Chas. Reed, Buell, Hurdman & Co., Hull; William Mason, Mason & Sons; Jackson Booth; H. K. Egan, Hawkesbury Lumber Co.; Ward Hughson, Gilmour & Hughson; and Claude McLachlin, McLachlin Bros., Arnprior. Upon motion of J. R. Booth, seconded by Levi Crannell, the following resolution was adopted: "At a meeting of the umber and timber trade of the Ottawa valley it was unanimously agreed that the government should take power from the House to protect the sawn lumber and pulp interests of Canada against serious discrimination threatening it as contemplated under the Dingley bill."

Mr. Albert E. Reed, a large paper manufacturer of Maidstone, England, arrived in the city recently on a visit to his uncle, Dr. Wm. Saunders, of the Experimental Farm.

Some of the mills have commenced sawing, and others are receiving the finishing touches preparatory to commencing the season's work.

OTTAWA, April 21st, 1897.

## BRITISH COLUMBIA LETTER.

[Regular Correspondenc of the CANADA LUMBERMAN.]

CROWN TIMBER COMMISSION.

THE chief topic of conversation among lumbermen in this province is the investigation which is now being made by the Dominion government into the working of the crown timber agency. Mr. Archer Martin was appointed commissioner, and the managers of nearly all the mills and a very large number of loggers and farmers have been examined under oath. Pending the result of the investigation, Mr. T. C. Higginson, crown agent, sent in his resignation, in accordance with the departmental rules in such cases. For some time past rumors of dissatisfaction have been current, and the government resolved to make a thorough investigation. From the evidence submitted it would appear that the authorities had not received payment for all the timber cut on government land, and that many inconsistencies had been brought to light, but as the country is of immense area, rendering it necessary to give the agent much latitude to enable him to act in the best interests of the country, it is probable that everything may be satisfactorily explained.

The commission is far reaching, the companies being compelled to submit figures showing the amount of timber cut and the dues paid thereon. Mr. Higginson explained that he sometimes gave verbal permits, as the settlers could not always pay the cash deposits for a regular permit before they commenced cutting, and his object was to assist the settler. The result of the commission is awaited with interest.

TAKUSH HARBOR TIMBER COMPANY.

According to reports, the manufacture of cypress lumber which was commenced about a year ago at Takush Harbor is to be abandoned. This was a new industry on the Pacific coast, and was somewhat of an experiment. An English syndicate purchased some cypress limits from Vancouver capitalists situated about 300 miles north of Vancouver, and fitted up a mill on an extensive scale. The men were recently paid off, and it is stated that work will not be resumed, as the timber is not there for profitable working, the majority of the trees having turned out to be of inferior quality.

G. O. Buchanan, of the Kootenay Lake saw mill, has acquired 1,000 acres of fir and white pine timber lands on the Moyie river, East Kootenay. A gang of men is taking out 1,000,000 feet of logs.

NEW WESTMINSTER, B. C., April 19, 1897.

# THE NEWS.

—Laking, Thompson & Patterson, of Hamilton, have lately put in an improved dry kiln.

—D. & J. Hadden, of Foxmead, Ont., intend putting in a stave mill this spring.

—Sargent's mill at Nelson, N. B., has been fitted with an electric light plant for night sawing.

—J. P. Ryley, of the Victoria planing factory, Lindsay, Ont., has added a new dry kiln to his plant.

—A joint stock company has been organized at Summerside, P. E. I., to erect a woodworking factory.

—Mr. Douglas, of Stanley, N. B., is making improvements to his mill and putting in an electric light plant.

—Alexander McKinnon, of Hillsburg, Ont., has purchased from the Waterous Engine Works Co., Brantford, an improved shingle mill.

—At Coggin's mill, near Sission, Cal., loggers cut a tree which was 404 years of age. It was eight feet in diameter and produced 15,000 feet of lumber.

—Ritchie Bros., of Aylmer, Ont., have purchased the old Cormier saw mill for the sum of $3,500. The mill and adjoining factory will be thoroughly repaired.

—The Shultz Bros. Co., of Brantford, Ont., are seeking incorporation to acquire the business of Shultz Bros., contractors and lumber dealers. The capital stock is $90,000.

—W. C. Edwards & Co., of Ottawa, have donated the lumber necessary for finishing a room in the Canadian headquarters at Bisley, Eng. Other materials have also been given by different firms.

—The Wilson Company, of Montreal, is a new company which proposes to manufacture lumber, tan bark, etc. The capital stock is $100,000. Among the promoters is David Mitchell, lumber merchant, of Forestdale.

—The Dominion government has increased the quantity of green timber which may be cut by a settler from 1,800 to 3,000 lineal feet, and no restriction is placed upon burnt or fallen timber which may be taken for building purposes.

—The Woodstock Woodworking Co., of Woodstock, N. B., have elected the following officers: Wendell P. Jones, president; James W. Astle, manager; Herbert A. Seely, secretary-treasurer. The company have now about fifty men engaged at the factory and in sawing, hauling and piling lumber.

—A company is seeking incorporation, to be known as Twidale, Dunn & Company, for the purpose of carrying on business in the city of Montreal as manufacturers and dealers in lumber. The capital stock is $20,000. Among the promoters are Michael Dunn, of Montreal; Henry Aylen, of Ottawa; and Duncan McPhail, of the township of Wakefield.

—A meeting of lumbermen engaged in operations in the Georgian Bay district was held in Toronto on the 20th ultimo, at which there were present, Ald. Scott, H. H. Cook, John Bertram; Robt. Thompson, Hamilton; W. Thompson, Longford; J. B. Smith, W. H. Pratt, and T. D. Master. Resolutions were passed favoring an export duty on saw logs in case a duty is imposed upon lumber by the United States, and disavowing all reports to the effect that they were willing to pay an import duty of $1 per thousand feet.

—In a paper read before the Imperial Institute, London, Eng., entitled "The Timber Supply of the British Empire," Dr. Schlich, C. I. E., Professor of Forestry at the Royal Indian Engineering College, stated that Canada was estimated to contain 1,248,798 square miles of woodlands, but enormous tracts of that area did not contain any useful timber, while the remainder was by no means so well taken care of as it ought to be. Fires were frequent and disastrons, and the quantity of timber thus lost to the colony was calculated to be many times more than that cut down and exported. Notwithstanding those drawbacks, however, he believed that with proper management and careful conservation of the forests Canada might, at a moderate relative expenditure, supply the whole world for many years to come. He advocated the creation of a forest department in this country, the careful conservation of existing and the creation of new forests by planting vacant lands, the establishment of schools of forestry, and model plantations for the guidance of private owners, and government grants in aid of those objects.

## CASUALTIES.

—Hormidas Tailleur, an employee of the W. C. Edwards Company, Ottawa, died in the bush near the firm's shanty on the Kippewa, having lost his way in the woods.

—Frank Armstrong, of Pennfield, employed in the lumber mill of S. H. White & Co. at Alma, N. B., caught his arm in the belting and was instantly killed.

—A serious accident occurred to Samuel Anderson, of Kazabazue, Que., recently. By the breaking of a picket that was holding a rollway of logs, he was knocked down and thirteen logs rolled over him. It is thought he will recover.

## SHAVINGS.

Mr. W. H. Winnett, lumber dealer, London, in renewing his subscription to the LUMBERMAN, reports business very good, and that he finds the LUMBERMAN very interesting.

Patents have recently been granted in Canada as follows: Fred. Cluff, Mar, Ont., saw guide; H. M. Wilcox, Owen Sound, Ont., cutter-head for wood-working machinery; J. A. Ulman and Victor L. Emerson, Baltimore, U. S., lumber truck.

Mr. Campbell, of Barrie, Ont., is making a jubilee cane for the Queen. It will contain 1,897 pieces of wood, birch, maple, cedar, ash, oak, walnut, thorn, Russian mulberry, sumach, lilac, cherry and acacia, with pearl and ivory, inlaid with foreign wood. The cane is 2 feet 10 inches long.

The McEachren Heating & Ventilating Co., of Galt, Ont., have started in their new premises recently occupied by Messrs. Cant Bros., where they will manufacture a full line of ventilating fans, electric fans, shaving fans, blowers, exhausters, etc., besides their dry kiln machinery and "Little Wonder" boiler. They have received a number of orders recently from Ontario and the lower provinces.

Many persons feel that the loss of one brace or one stay is not of very great importance, and go on using a boiler with full knowledge that one or even more braces are broken. The loss of one stay throws double the work upon others adjacent; but, more than this, the plate protected by it, while it may not give way at the moment, is unsustained, and will be depressed to a greater or less extent. Braces and stays should be carefully looked after every time the boiler is opened for inspection, which last duty should be done every month.

Speaking of the reduction of duty on rubber belting made by the new tariff, Mr. J. H. Walker, manager of the western branch of the Canadian Rubber Company, remarked that the present duty would permit of the importation of some inferior grades of belting, and for a time competition would be felt in this connection. The public would soon become convinced, however, of the economy of purchasing a first-class article, and the trade would then resume its normal condition. "We manufacture the best frictional belting in America to-day," said Mr. Walker, "and this fact has been acknowledged even by our competitors. The business of the western branch last year showed a gain over 1894 of $140,000."

# WOOD PULP DEPARTMENT

## THE PULP INDUSTRY AND ITS POSSIBILITIES.

STRONG pressure has been brought to bear upon the Dominion government within the past month to induce them to impose an export duty upon Canadian pulp wood, but as is the case with every question having different bearings, this proposal has both its advocates and opponents. Canadian pulp manufacturers are, of course, a unit in its favor, and rightly so, inasmuch as the pulp wood is now exported free of duty, while a tax equal to about $2 per ton is imposed on the manufactured article by the United States government. The opinion is also becoming more general among lumbermen that our pulp wood should be manufactured at home, and many of them have thus declared themselves. The main opposition to the export duty on pulp wood comes from settlers, who have in the past been enabled to earn a livelihood by selling the wood to the American concerns, and who fear they may lose their bread and butter by the change in the tariff.

Foremost among the advocates of the duty has been Mr. P. J. Loughrin, general labor organizer for Canada, who has been lecturing at different points in Ontario. He states that 600,000 cords of pulp wood are exported annually to the United States, for which from $2 to $3 per cord is paid. This raw material is then manufactured into pulp and paper, at a cost of from $7 to $11 per cord, which amount, he claims, should be expended in Canada. In support of his arguments that the United States must have our spruce, he states that there are 232 pulp mills in that country idle for want of raw material.

Mr. Milton Carr, of Trout Creek, does not agree with Mr. Loughrin, and has endeavored to point out through the Toronto Globe wherein he errs. In his vicinity, he says, the sale of pulp wood is the chief source of revenue, and without it the settlers could scarcely maintain themselves.

Mr. E. B. Eddy, of Hull, believes that an export duty on pulp wood would result in building up an immense industry in Canada, and favors a duty of $4 per cord. He says: "If an export duty is levied to the extent I have stated it would lead immediately to the investment of some five or six million dollars in the erection of mechanical pulp mills, stretching all the way from St. John, N. B., in the east to the Lake of the Woods in the west, and this would lead to the building up of scores upon scores of villages where waste lands now exist, and give employment to thousands upon thousands of the laboring class, and the demand for labor would be more than we could supply. The labor required to manufacture one million tons of pulp and to freight it to the border would necessitate an outlay of some $5,000,000 annually."

In view of the many conflicting interests bearing upon this question of an export duty, it may not be amiss to give some figures and review briefly the possibilities of the Canadian pulp industry. First, it must be admitted that Canada possesses a greater supply of pulp wood than any other country in the world, and that no other suitable raw material has yet been found, or seems likely to be discovered in the near future, for the manufacture of pulp for paper making. The quality of pulp produced in Canada is said to be superior to the Scandinavian article, and has been given a favorable reception by British paper manufacturers. It has recently been pointed out by a Canadian paper manufacturer of wide experience that the climate of Canada is particularly adapted for growing spruce for making pulp, that at the close of a comparatively hot summer the advent of winter puts a sudden stop to vegetation and growth of fibre, which is not the case in other climates where the advent of winter is slower, and which leaves a fibre that is too hard, while the trees grow too knotty for the best quality of pulp.

That British capitalists are already turning their attention to Canada for a supply of pulp is shown by the statement published within the past fortnight that Mr. Reed, a large English paper manufacturer, had purchased the Masterman pulp mill at Chatham, N. B. This is believed to be an indication of the trend of the trade.

Norway and Sweden have in the past furnished the pulp supply of Europe, but the timber in these countries is becoming exhausted. Hence the market for Canadian pulp in Europe is at once opened up, an opportunity which manufacturers should not allow to pass.

Turning now to figures, it is estimated that there are in Canada thirty-four pulp using paper mills, operated in connection with which are nine chemical fibre and eight ground pulp mills. The paper made in Canada amounts to about 64,000 tons a year, the chemical fibre to 27,000 tons, and the ground pulp to 125,000 tons a year. The value of the annual output of the mills is given as $6,500,000. Canada exported to the United States last year $557,000 worth of pulp wood. To Great Britain the pulp exported was valued at $113,000, and pulp wood at $27,000.

It is estimated that in the United States the annual output of ground wood pulp is 700,000 tons, and of chemical and sulphite pulp 480,000 tons, for the manufacture of which 1,000,000,000 feet of spruce would be required. The increase of the ground wood pulp business in the past fifteen years has been 1058 per cent.

Some statistics of the foreign imports of Great Britain should prove interesting. In 1895, the last year for which we have any returns, that country imported 297,094 tons of wood pulp, valued at $7,600,000, an increase of over $900,000 over the previous year. Of this Canada supplied only $400,000; United States, $250,000; Sweden, $1,700,000; Germany, $380,000; Holland, $330,000; Russia, $250,000, and Austria, $125,000. The British importations of foreign paper in the same year amounted to $1,442,000.

According to the Statistical Year Book Canadian wood pulp sold in Great Britain in 1893 at $24.80 a ton, while the Scandinavian product only commanded $20.77.

## PULP NOTES.

A pulp mill will probably be erected this summer at Lake Megantic, Que.

The St. Johns News understands that the Canada Paper Co. will build a large pulp and paper mill at the new dam at Windsor Mills, Que.

The new pulp mill at Sturgeon Falls, Ont., is nearing completion. The contract for four large pulp grinders has been given to the Bagley & Sewall Co., of Watertown, N.Y., the machines to be delivered before the first of June.

The Petewawa Lumber, Pulp & Paper Company has been incorporated by the Ontario government, the promoters being A. Drewson, New York; A. T. Mohr, Niagara Falls; and Geo. Urban, jr., T. C. Becker and Geo. Dakin, of Buffalo.

Mr. Windler, of New York, has purchased lands on the Saguenay River, Que., from the Terres Rompers to Caron's Falls, near the mouth of Rievere aux Sables, and will build a pulp manufactory there employing from three to four hundred men.

The St. Raymond Company, of St. Raymond, Que., is seeking incorporation, to carry on business as pulp manufacturers. The promoters are John Macfarlane, F. W. Evarts, W. Drake, G. F. O'Halleran and E. H. Barber, and the capital stock $50,000.

It is reported that Sir William C. Van Horne, president of the Canadian Pacific Railway Company, and Mr. R. B. Angus, president of the Bank of Montreal, have become associated with General Alger in operating the Laurentide Pulp Company, of Grand Mere, Quebec.

Paper and pulp boards are in demand among apple growers in Canada for use in the barrel heads. It is stated that they preserve the apples better than th wooden barrel heads. Paper pulp is also being used in America as a substitute for wood in the manufacture of black-lead pencils.

We learn that a small lot of about 15 tons of Canadian sulphite has been disposed of in the London market, and that the mills it has gone to have given it a very good report; in fact, in some cases we believe it was reported to be better than the best Scandinavian makes. It is said to be very clean and easily bleached.—Wood Pulp, London.

The largest paper mill is at work in Germany, in the straw pulp manufactory of Tannicht, near Croswig, Saxony. It is a cylindrical mill of 4,000 kilogrammes capacity, and fourteen metres in length, worked by electricity. It requires forty to forty-five minutes to fill it, and it is emptied in five to ten minutes. The straw pulp is washed, crushed and bleached in the mill.

Chemical pulp will probably be scarce in Great Britain this year. Half the Norwegian mills are reported to be sold out for the whole year, and the others have only unimportant lots left. Buyers show more and more disposition to meet makers' price ideas, and sellers will most likely soon be able to obtain fully those high prices which they are now quoting. Sulphite pulp has been in active demand lately.

Mr. Albert E. Reed, a large paper manufacturer of Maidstone, Kent, England, is at present on a visit to Canada, and is said to have purchased the Masterman sulphite pulp mills located on the Miramichi river, at Chatham, N. B. He proposes to enlarge the capacity of this mill to thirty tons per day. The greater part of the pulp will be required in England to supply the needs of the paper mills operated by Mr. Reed, which has hitherto been obtained mainly from Norway and Sweden.

Do you propose making any changes in the equipment of your mill? If so, drop a card to the CANADA LUMBERMAN giving the particulars. The publisher is always pleased to hear from subscribers.

## LEGAL DECISIONS.

LINDSAY VS. KLOCK.—This suit was instituted in the Superior Court at Hull, Que., by Archibald Lindsay, to recover $20,000 damages from R. H. Klock & Co. for the burning of the former's mill at Aylmer. From the judgment delivered by Judge Gill the following is taken:

The Messrs. Klock had leased the mill and had the right to make certain repairs. They started to make the repairs to the mill; and the twenty-ninth day of the month of March the mill was burned during the night-time.

It was shown that the defendants had a night watchman; that they had made new repairs; that they had put in "Dutch ovens," so as to create more steam, and the fire was attributed to this innovation, from the fact that it is said that the Dutch ovens allow sparks to escape more easily than the former apparatus; and plaintiff endeavored in the evidence to prove facts which would place the responsibility on the defendants. On the other side it was proven that these Dutch ovens are adopted in mills, and that the customary manner of adapting them was resorted to in this mill. Moreover, it is alleged that they are no more dangerous than other appliances, and that it is not known how the fire occurred; that it may have taken place and arisen from sparks, but that they don't know. A steam pump was there in case of fire, and all precautions which are usually taken to protect property from fire were used, and consequently defendants were held not liable.

---

S. C. KANADY LUMBER CO. VS. THE BROADFOOT & BOX FURNITURE CO.—This was an action tried last month at the County Court at Toronto, and will interest lumber dealers in general. The following particulars are obtained from a report furnished by the counsel for defendants: The defendants gave the following order to plaintiff's traveller:

TORONTO, 24th Sept., 1896.

S. C. KANADY.

DEAR SIR: Please ship to Broadfoot & Box Co., of Seaforth:

| Quantity. | Description. | Price where, per M. | Terms. |
|---|---|---|---|
| 1,000 ft. ½ in. | Birch 1 and 2 | | |
| 1,000 ft. 2 in. | Birch 1 and 2 | | |
| Balance of car 1 in. | Birch 1 and 2 | 23 | Seaforth |

Put on 500 ft. of 3 in., if possible 4 in. and up wide, cut two years.

(Sd.) "BROADFOOT & BOX FUR. CO."

Defendants stated in conversation that led up to above order that red dry birch for a particular purpose was wanted. Mr. Broadfoot was not at home when car arrived, and the lumber was unloaded. The inspection made by defendants, however, found the order unsatisfactorily filled, and they refused the car. Plaintiffs sued, and the point fought out in the trial and decided against the defendants was that saps in birch are not a defect, and that if one wants "red," it must be specifically mentioned. The evidence was sadly conflicting, and made the court and counsel wonder how lumber business could possibly be carried on without law suits, when no two lumbermen agreed on the qualifications of Nos. 1 and 2. Defendants' contention was, Nos. 1 and 2 gave them the best two grades in the log; plaintiffs', that the red could be picked out, and an order for 1 and 2 filled. Defendants contended that firsts and seconds called for standard lengths, which were 12, 14 and 16 ft., admitting ten per cent. of 10 foots. Plaintiffs replied that you could go down to 8 feet, provided board was perfect otherwise. As to other qualifications, defendants set up the qualifications of firsts and seconds as follows:

Firsts are to be 8 inches and over in width.
8 to 10 inches wide shall be clear.
11 to 14 " " will admit ⅓ bright sap on one side, or one standard knot.
15 to 20 inches wide will admit ⅓ bright sap on one side, or two standard knots.

Seconds are to be 6 inches and over in width.
6 and 7 inches shall be clear.
8 to 10 " will admit one standard knot.
11 to 14 " " " two " knots.
15 to 20 " " " three " "
In seconds, bright sap shall not be considered a defect.

Culls include all lumber not equal to the grade of seconds, one-half of each piece being merchantable. Other than above shall be classed as mill culls.

A scale of the lumber on this basis showed about ninety per cent. seconds and culls, and ten per cent. firsts, with about ten per cent. red in the whole car.

Defendants further contended they were entitled to fifty per cent. of firsts, and that the reds had been picked out. The evidence of the plaintiffs went to show that the minimum width of firsts and seconds is six inches, and that saps are not a defect in either firsts or seconds; further, that there is no settled proportion of firsts and seconds in a combined order of firsts and seconds. The judge smilingly said the Legislature, as they were so anxious to pass new acts, might try their hands at settling the rules of lumber inspection; but he was unable to find that the defendants had not filled substantially the order.

---

THE following decision in the case of Deslauriers vs. the B. A. Land Company, rendered by Mr. Justice White, will be of interest to proprietors of timber limits: "The plaintiff, one of several laborers employed by his father in the manufacture of logs, ties and pulp wood, sued the company for thirteen days' wages due him by his father. His pretension was that the company was liable, because they had taken from his father a quantity of ties, pulp wood and logs in settlement of their claims for trespass, and had disposed of them. The court held that any rights of accession in value by the added labor belonged to the employer of the labor, who could validly transfer such rights to the owner of the material, and that the several laborers had no privilege upon the wood manufactured in trespass upon the lands upon which the manufacturer had no rights whatever. Action dismissed with costs."

---

## PUBLICATIONS.

The New Brunswick Tourist Association, of St. John, in publishing "The Gripsack," is performing a desirable work. Its main object is to make known the many seaside attractions possessed by the maritime provinces, and the illustrations in the last number convey a clear idea of their beauty.

The April number of the Ladies Home Journal is an Easter issue, and is brimful of entertaining reading. Clifford Howard tells the story of the most beautiful Easter service in America, and ex-president Harrison has timely articles describing "The Social Life of the President." Other equally popular articles go to make up a complete number.

THE J.C.McLAREN BELTING Co MONTREAL

## AN ELECTRIC SAW MILL.

AT Folsom, Cal., the American River Land and Lumber Co. recently started its new saw mill. This mill in most respects is like other modern band mills of 75,000 feet daily capacity, or about 120,000 feet when running double time.

The interesting feature about this mill is that all its machinery is driven by electric motors. The motor that runs the band is of 75 horse power and has a speed of 600 revolutions per minute. The edger has a 50 horse power motor that runs 700 revolutions per minute. Then there are three motors of 30 horse power each, one of which runs the log roller and refuse conveyor, another runs the carriage and friction reverse, while the third runs the trimmer and live rolls. A 5 horse power motor runs the filing room machinery.

When the mill was started on the morning of the first day of December, it worked successfully from the start. In the words of a spectator: "At the hour appointed two of the men, with pike in hand, picked out logs that were suitable for the initial sawing and they were drawn up the chute from the pond below and rolled on the table. The switch was touched and the big saw began its work, smoothly and evenly. The machinery began to turn as easily and quietly as if, instead of being new and untried, it had become used to its business, and everything went on without a hitch."

The waterfall which furnishes the power for the motors is 600 feet distant from the mill. The company estimates that there will be considerable saving in wear and tear over the ordinary steam-driven machinery. The comparative cost of equipment and operation are not given in an article in a Sacramento paper, from which these statements are taken. It is the intention of the company to build a planing mill and box factory in connection with the saw mill, using electrically transmitted power.

Readers of THE LUMBERMAN are reminded that correspondence is invited upon all subjects of interest to the lumber trade. A free discussion of current topics will always be given.

Mr. Gregory proposes erecting a saw mill at Midland.

W. H. Kelly is erecting a saw mill at Buckingham, Que.

W. W. Carter is erecting a shingle and planing mill at Fesserton, Ont.

A new saw mill has been erected at Bake Lake, Ont., by Frank Buchanan.

A number of Pembroke citizens, including Hon. Peter White and Francis Inglee, lumber merchants, are seeking incorporation as the Pembroke Navigation Company, for the purpose of towing rafts of timber and saw logs, etc.

CHATHAM, ONT., June 19th, 1896.

JAS. S. PARMENTER, Flushing, N. Y.

DEAR SIR: We take very great pleasure in being able to say from nearly one year's use of your Patent Dry Kiln, we find it away ahead of anything we ever yet tried for thoroughly drying lumber without injuring it in the least. So far we have found exhaust steam alone sufficient for our purpose, so that it absolutely costs us nothing to run it. We thoroughly dry white oak, rock elm, balm and other hardwood lumber in less time than we ever did with a blast kiln, and especially find it a splendid kiln for drying white oak hubs It does its work so naturally that neither hubs nor lumber are injured by it.

## MESSRS. KING BROS.

AMONG the largest manufacturers of pine and spruce lumber in the province of Quebec are Messrs. King Bros., Limited, whose first operations were commenced nearly seventy-five years ago by the late Charles King, who erected a small mill at St. Antoine de Tilly. The present firm is composed of Messrs. Edmund Alexander, Charles and James King. The particulars given below of the various mills operated by this firm are obtained from a special Canadian edition of the Timber Trades Journal :

At Grand Pabos, in Gaspe county, is situated a large mill, having a capacity of 10,000,000 feet annually. Spruce is the principal lumber manufactured, but on their 500 miles of timber limits adjoining there is also considerable pine.

A mill at Cedar Hall, in the county of Rimouski, has a capacity of 8,000,000 feet, principally spruce, the raw material being obtained from the limits surrounding Lake Matapedia, comprising 125 square miles. The lumber is shipped either from Dalhousie, N. B., Rimouski, or Riviere du Loup, Que., such are the shipping facilities. On the above timber limits there is also a quantity of cedar.

Messrs. King Bros. have two mills at Riviere Ouelle, on the Intercolonial Railway, which we illustrate on this page. Their joint capacity is 8,000,000 ft. The timber is furnished from private lands owned by the firm, and from about 350 square miles of limits under license from the Quebec government. The wood is chiefly spruce, with a light supply of pine. An area of 135 miles of timber land, in the county of Lotbiniere, is also owned by this firm, which furnishes the timber for three mills, located at Kingsbury, Brousseaus and Hadley. The combined capacity of these three mills is probably 16,000,000 ft. per annum.

At Lyster, on the line of the Grand Trunk Railway, about forty miles from Quebec, is another mill, with an annual capacity of 8,000,000 feet, the supply of logs for which is obtained from private and licensed lands.

Three other mills of this firm are situated on the line of the Quebec Central Railway, the output of which finds a market chiefly in the United States, a small portion being shipped to Great Britain from the port of Quebec. The annual capacity of these mills will average from 10,000,000 to 12,000,000 feet. From the above it will be seen that Messrs. King Bros. manufacture in their own mills probably 60,000,000 feet of spruce and pine per year, while in addition they control the output of several smaller mills situated at different points. Their goods have a wide reputation in the European markets for superior quality. The business has recently been converted into a joint stock company.

SAW MILLS OF KING BROS. AT RIVIERE OUELLE, QUE.

## GUARDING AGAINST MIILL ACCIDENTS.

SAW mill owners are endeavoring to guard the machinery in their mills so as to render accidents to employees less liable, says the Mississippi Valley Lumberman. During the last few years many improvements in this direction have been made. Such improvements can only be made as their necessity is seen, and saw mill men say that all accidents occur in a different way, and it is only after they have happened that a need of guarding a machine is seen. During the past winter Minneapolis saw mill men have held several conferences with the state labor commissioners, and the matter of protecting employees in the mills as well as the factories has been carefully considered, and as a result many additional precautions will be taken the coming summer in the Minneapolis saw mills and sash and door factories. This is a move in the right direction. Employers as well as employees realize the necessity of guarding life and limb in mills and factories. Employees are often prone to complain of apparent negligence on the part of their employers in this respect, but no wise and careful manager will omit a single step that will tend to further protect his employees. Accidents often occur because of the negligence of foremen and others to whom the duty of looking after these matters has been entrusted by their employers. To be sure, the employer is liable for the sins of commission or omission on the part of his agents, but we believe that by far the greater part of saw mill owners are anxious to do all they can to prevent the occurrence of dangerous as well as fatal accidents that are frequent in the busy sawing season. It has been noticed that accidents to mill hands occur more frequently with night crews than with those who work in the day time. This is due to the fact that the day crews are made up of old and experienced men, who soon learn to know and understand the machines with which they are working. In the rush season night crews are put on, and usually these men are not as experienced as are the day men, for the best men are selected for the day crews; but after the night crews get their work well under way accidents are less frequent. Still there are certain accidents that will always occur where many men are employed at dangerous machines, and all that employers can do is to lessen this liability as far as lies in their power.

Readers of THE LUMBERMAN are reminded that correspondence is invited upon all subjects of interest to the lumber trade. A free discussion of current topics will always be given.

## ONTARIO CROWN TIMBER AGENTS.

SUCH are the relations existing between crown timber agents and lumbermen that no apology should be necessary for placing before our readers the accompanying portraits and particulars of the gentlemen to whom is entrusted the supervision of the cutting of timber in Ontario. The portraits appearing herewith do not represent the complete staff of crown timber agents, several photos not having come to hand at time of going to press. These we hope to make subjects of the engraver's art in our next issue.

### MR. J. B. MCWILLIAMS.

Located at Peterboro', and having charge of the Midland division, is Mr. J. B. McWilliams,

MR. J. B. MCWILLIAMS, Peterboro'.

who is also superintendent of woods and forests for the entire province, which appointment was made on the 15th of May, 1894. Mr. McWilliams may be said to be a thorough Canadian, his father coming to Canada from Ireland when only eight years of age and settling in the county of Peterboro'. He was born in the township of Belmont in the year 1845, and removed with the family to Peterboro' in 1857, being educated at Norwood and Peterboro' grammar schools. At the age of nineteen years he launched into business on his own account, conducting a successful carriage-making trade for seven years, employing eighteen hands. In 1869, owing to ill-health, he disposed of his business and accepted the position of deputy-sheriff for the county of Peterboro', and three years later, in February, 1872, was appointed crown timber agent for the Midland division, a position for which he was well fitted, having obtained an early training with his father, who was an extensive lumberman in the pioneer days of the province.

Although not aspiring to public honors, Mr. McWilliams has filled a number of offices in the gift of the municipality. In 1877 he was elected a member of the town council, was a director of the Agricultural Society for 1885 and 1886, and in the latter year was appointed Justice of the Peace. He was elected to the School Board by acclamation for four successive years, then retiring, and at the last municipal contest was again elected to the town council by the largest vote ever polled in the town by any candidate. For fifteen years Mr. McWilliams held the position of County Master of the Orangemen, and has also been Deputy Grand Master and Grand Director for Ontario East. His name has been frequently before the Liberal conventions as candidate for the House of Commons and local legislature, but he has refused to accept the honor. Mr. McWilliams served in the Fenian raid as a member of the old Peterboro' Rifles, and many an interesting incident can he relate.

### MR. WM. MARGACH.

Mr. Wm. Margach, who has charge of the Rainy River district, was born in Scotland in 1837 and came to Canada when twenty years of age. He entered the service of the Ontario government in 1879 as superintendent of colonization roads, and was appointed crown timber agent for the district of Thunder Bay in August, 1882, being transferred to district of Rainy River in 1888, with headquarters at Rat Portage.

The boundaries of the district under Mr. Margach's able management extend from Hunter's Island to the north of Minnesota, thence along the international boundary to the north-west angle of Lake of the Woods, a distance of 200 miles, thence north along the western boundary of Ontario to English river, 100 miles, easterly along same river to the eastern end of Lake Seul, 200 miles, and thence south to south-east end of Hunter's Island. In this territory there are large quantities of red and white pine, which is manufactured at Rat Portage for the western market. There are large quantities of pine on the height of land and on the small rivers not yet sold on account of the distance from market. This objection, Mr. Margach claims, would be overcome by the construction of a railway to the south of the C. P. R. But pine is not the only valuable timber to be found in this district, as there is probably no part of the province of Ontario where such large quantities of spruce exist. For a distance of 80 miles along the Rainy river, with a depth of 10 miles, the land is largely covered with spruce and poplar timber, while along other rivers spruce is also to be found in large quanti-

MR. WILLIAM MARGACH, Rat Portage.

ties. These rivers furnish immense water powers, which at no distant date will be utilized in the manufacture of pulp. About half of the territory is covered by water, and many of the lakes abound in fish. As the population of Manitoba and the Territories increase, Mr. Margach looks for a marked improvement in the lumber trade of that section. There is now large quantities of ties taken out for the C.P.R., probably about 500,000 each season, as well as stave bolts for the Lake of the Woods Milling Co.

### MR. HUGH MUNRO.

The territory known as the Thunder Bay agency is under the supervision of Mr. Hugh Munro, whose headquarters are at Port Arthur. It extends from a line running north from the mouth of the Michipicoton river to a point near Fort Henley, on the Albany river, thence west to a line running from the east end of Hunter's Island north to a point between Lac Seul and Lake Joseph, the Albany river being the northern boundary and Lake Superior and the international boundary the southern. The area is probably over 60,000 square miles. The principal timber in the district is spruce, with areas of Norway and white pine, which as far as known would amount to 250,000,000 feet B.M. Owing to the

MR. HUGH MUNRO, Port Arthur.

depression in the lumber business, the amount cut of late years has not exceeded five million feet. The territory north of the C. P. R. track is yet unexplored, either for timber or minerals.

Mr. Munro was born in Aberdeenshire, Scotland, in the year 1833, and came with his parents to New York city in 1836, attending the public schools until apprenticed with a firm of artificers in marble, for whom he became foreman. For a time afterwards he studied medicine, then went into business in New York as a member of the firm of Dillanay, Foster & Co., sculptors and artificers in marble, and in 1858 engaged in general contracting, but owing to ill-health was compelled to give up the business. He then removed to Canada, settling in West Zorra, where he taught school for several years, afterwards devoting his attention to farming. In 1863 Mr. Munro was appointed a Justice of the Peace for the county of Oxford, and in 1882 received a similar appointment for the district of Algoma. In 1872 he was appointed Clerk of Works under the late Archibald McKellar, afterwards holding a similar position under the late Alexander McKenzie. Owing to political changes his services were dispensed with, when he removed with his family to Texas, where a partnership was formed to survey, explore and assay minerals. While there he was induced to associate with a Galveston company to go to Mexico to explore and purchase mines; made examinations of various mines, but was compelled by ill-health to resign his position of managing superintendent and return to Canada. He was reinstated in his former position by the late C. F. Fraser in 1882, and was in Rat Portage during the transition period. In May, 1889, he was transferred to the Crown

Lands Department as crown timber agent at Port Arthur.

In politics in the United States Mr. Munro was one of the old Abolition Society, being associated with such men as Theodore Parker, Birney and Walker. Upon coming to Upper Canada, as Ontario was then called, he became identified with the Reform party, and gave his first vote for the Hon. Wm. McDougall. He declined the nomination for the first local House offered by the Reformers of West Zorra. For five years Mr. Munro was county deputy of the I.O.G.T.

MR. E. GARROW.

The eastern division of the district of Algoma, in charge of Mr. Garrow, commences at the north-east corner of the township of Rayside, and

Mr. E. Garrow, Webbwood.

includes ten townships west, thence south to Lake Huron, between the townships of Shedden and Victoria, taking in the broken front on Lake Huron and Georgian Bay to the boundary between Nipissing and Algoma districts, which is the eastern boundary. Pine, spruce, cedar, tamarac, birch and balsam are found in this section in large quantities, with separate ridges of maple and hemlock.

Mr. Garrow was born in the township of North Dumfries, county of Waterloo, Ont., in January, 1848. When six years of age he removed with his father to the county of Huron, McKillop township, where he lived on the old homestead until the year 1868, when it became necessary either to get more land or find some other employment, as several members of the family were verging on manhood. The subject of this sketch determined to learn the millwright trade, and with that object in view, on the 6th of January, 1868, he commenced an apprenticeship of 3½ years with Robert Thompson & Co., afterwards Thompson & Williams, of Mitchell. After serving his term of apprenticeship he entered into partnership with a fellow millwright and purchased a grist mill and a small saw mill in the village of Belmont, 14 miles south-east of London, and in this connection obtained his first lessons in running a circular saw. At the end of three years Mr. Garrow sold his interest in the property and entered into partnership with his brother, erecting a good saw and shingle mill in the village of Cranbrook, Huron county, this partnership continuing until the first of January, 1880, when he assumed full control. He continued to operate there until the spring of 1885, when a number of portable saw mills were started in the neighborhood, and competition became so keen as to leave no profit in the local trade. Mr. Garrow then transferred the machinery to Nipissing Junction, in the district of Nipissing, where he continued to operate and do a fairly profitable business until the night of the 22nd of January, 1890, when fire left nothing for years of toil and hardship but a heap of ruins and ashes. This for a time, and probably for life, terminated his sawmilling career and 18 years' of practical experience in manufacturing lumber. One year previous to the burning of his mill, Mr. Garrow was employed by the Crown Lands Department in the capacity of colonization road overseer on a local road, which position was given unsolicited. Afterwards he received the appointment of wood ranger, being dispatched as a special to Rainy River district to watch the government interest during the season of 1891-92. The following season he was placed on the permanent staff of the Department and delegated to assist Mr. P. C. Campbell, crown timber agent at Sault Ste. Marie. This position he held until October, 1895, when it was decided to divide the district of Algoma, and the government gave Mr. Garrow the appointment of agent for the eastern division.

MR. E. J. DARBY.

The Ottawa district, for which Mr. E. J. Darby is acting crown timber agent, contains about 7,000 square miles, and embraces all territory in Ontario drained by streams flowing into the Ottawa river from the mouth of the Mississippi to the head of Lake Temiscamingue, which is the highest point under license up the Ottawa on the Ontario side, going back from the Ottawa to the head waters of the Madawaska, Bonnechere,

Mr. E. J. Darby, Ottawa.

Petewawa and Mattawa rivers. The principal output is pine saw logs, the square timber trade having been of late years comparatively small, but a large trade is now springing up in other woods, owing to railway facilities. The importance of this territory may be estimated from the fact that the revenue therefrom to the province of Ontario since confederation amounts to over $6,000,000.

Mr. Darby was born in the city of London, England, in 1839, being now in his 58th year. He came to this country in 1857, making the city of Ottawa his objective point, where he engaged with the lumbering firm of Messrs. Hamilton Bros., with whom he remained for a year. He was then engaged with Messrs. Gilmour & Co., and continued with them until the spring of 1872, his experiences being altogether in the saw log business in the Gatineau river district. At that time he took charge of Mr. Benson Bennett's business on the Gatineau, with headquarters at Desert, and continued with them for one year. For the next two winters Mr. Darby was employed by the Quebec government as wood ranger in the Upper Gatineau district. In 1875 he entered the employ of the federal government as clerk in the timber office at Ottawa, that government then having the control, and on the abolition of the office in July, 1889, he was employed by the Ontario government as clerk in the new Ontario crown timber office. In January, 1892, W. J. Macdonald, the late agent, died, and Mr. Darby has been in charge since that time.

Saw Mill of W. T. Murney & Co., Sarnia.

## A WESTERN ONTARIO MILL.

The business of Messrs. W. T. Murney & Company, of Sarnia, Ont., was only established last year, but in that short time the firm have built up a fair trade both in Canada and the United States. They manufacture all kinds of lumber, but make a specialty of long bill stuff and ship timbers in white oak and pine, cutting stock 64 feet in length. The mill, which is shown above, is 140 feet long by 40 feet wide, and has a capacity of 50,000 feet per day of ten hours. The principal feature of the mill is its economy in fuel, being fed by sawdust carriers from the machinery edgers, slab saws, lath mill, etc. The logs are conveyed to the carriage by the usual endless chain, the carriage being operated by rope feed. The company's shipping facilities are unsurpassed, and under the able management of Mr. X. Baechler, their trade is certain to increase in volume.

The steamship Montezuma sailed from Montreal last month, having on board the first consignment of building materials for the Canadian building at Bisley. The shipment was composed wholly of Canadian woods, including cedar shingles, hardwood flooring, etc., from the manufactory of W. C. Edwards & Company, Ottawa.

Nathaniel Lusty's mills at Rodney, Ont., are running to their full capacity. Mr. Lusty has secured a large stock of logs during the winter and looks forward to a profitable business for the season. He has hardwoods of all kinds, and showed a correspondent of The Lumberman nineteen different woods. He also deals extensively in pine lumber, and has a well equipped planing mill in connection with his business, furnishing the building trade of his district.

CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

C. H. MORTIMER
PUBLISHER
CONFEDERATION LIFE BUILDING, TORONTO
BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

*TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## PROPOSED LABOR ORGANIZATION.

WITHIN the past two months a movement has been commenced among the workmen employed in the different branches of the lumber industry to organize an association, or, more properly speaking, a labor union, having for its object the securing of a higher remuneration for the services of the men thus engaged, the shortening of the hours of daily labor, and the general betterment of their condition. The idea, so far as we can learn, appears to have originated in the mind of Mr. William Hood, who has conducted a general store at Baysville, Ont., for some years, and who, at a meeting held at that place on the 26th of April last, was appointed general president. It is stated to be his intention to put a large number of organizers at work throughout Ontario to form local associations, and eventually to spread the movement to every province of the Dominion. The promoters of the organization claim to have been prompted to take such action by the long hours which men were compelled to work for a small remuneration.

While admitting that any movement which will improve the condition of the masses of the people is to be commended, and without desiring to condemn the proposed organization before giving the subject due consideration, we cannot but question the expediency of taking such a step at the present time, which, for reasons which will be briefly mentioned, we consider to be the most inopportune in the history of the lumber trade.

Indications now point to the fact that Canadian lumber entering the United States will be subject to a duty, probably $2 per thousand feet, a duty which all will admit will shut out from the American market a portion at least of our lumber, while thus far the Canadian government have made no declaration of their intention to impose an export duty on saw logs. Thus it would appear that should the above circumstances come to pass, the result would be that the manufacture of much of our lumber would be diverted to the American side, notwithstanding that the raw material is to be obtained at our doors. This is the outlook at the present time, and anything which will increase the price of manufacturing in Canada will certainly assist this movement.

It is also well known that lumber manufacturers have of late years made very little money, owing to the high figures paid for timber limits and lower prices obtained for lumber. True it is that supplies may be purchased at a less cost to-day than ten years ago, but this and other like advantages are more than offset by the facts mentioned above. Glancing over the province of Ontario, we can scarcely point to one lumber concern which may be said to be making more than a fair interest on the money invested, and we have it on the authority of several leading manufacturers that the lumbermen are not making money to-day in manufacturing lumber. There are some wealthy lumbermen to be found, but in most cases their riches have been obtained by speculation in timber limits and in contracting for getting out logs, rather than in the conversion of the logs into lumber. Manufacturers of white pine lumber have in recent years been confronted with strong competition from southern pine, which is produced by negro labor at the lowest possible cost, and which also has the advantage of cheap transportation. In many of the yards in the Eastern States which were once stocked with millions of feet of white pine, there is now very little of this article to be found, but a much greater quantity of the southern product. This has not only reduced the selling price of white pine, but has made the lower grades very difficult of disposal, hence the absolute necessity of cheapening the cost of production in order to meet the competition from southern pine.

Lastly, the question of remuneration for services is governed almost entirely by the law of supply and demand. During the past winter the number of men seeking employment in the woods was much larger than the requirement, and consequently the average wages paid was correspondingly less. We doubt whether by means of organization the standard of wages could have been raised, inasmuch as the history of similar labor unions is that only a portion of the persons engaged in any particular calling can be induced to become members.

Notwithstanding our views as above expressed, we are free to admit that in some instances workmen have been compelled to give their services for a remuneration altogether too small, yet most manufacturers realize that only by paying a fair wage, as governed by the prices obtained for their product, can the best results be obtained.

## THE DINGLEY BILL AND THE CANADIAN LUMBER TRADE.

ANOTHER step has been taken by the United States government towards the adoption of the Dingley bill. On May 4th the Finance Committee reported the bill to the Senate, having made such changes as were deemed expedient. In the lumber schedule some modifications were made of importance to Canadian lumbermen. The rate of $2 per thousand feet on sawn lumber is allowed to remain, but the extra duty of $1 for planing on one side and tonguing and grooving is reduced to seventy cents, and that for planing on two sides and tonguing and grooving from $1.50 to $1.05. This reduction has met with a strong protest from American lumbermen, who claim that the United States government is simply offering a premium for the establishment of planing mills in Canada. They argue that the difference in weight of lumber after being dressed will enable Canadian manufacturers of white pine to ship their dressed lumber into the American markets as cheaply as they could the rough stock.

Another alteration made by the Finance Committee has reference to the retaliatory clause. The 25 per cent. ad valorem addition to be imposed on lumber in case any country should place an export duty on saw logs or pulp wood is changed to add the amount of such export duty instead of any fixed sum, and the words "pulp wood" are eliminated from the clause. If we clearly understand the revised tariff, the Canadian government may impose an export duty on pulp wood without increasing the duty on lumber, but should an export tax be placed upon saw logs, then the amount of such tax will be added to the duty on rough sawn lumber. On the other hand, another clause of the bill provides that the amount of the export duty placed on pulp wood by any foreign country shall be added to the duty on manufactured pulp entering the United States. By the new arrangement the lumber and pulp industries are in no way dependent upon each other, but are considered as entirely separate. This, to the mind of the writer, is the only fair manner of dealing with the question, as we fail to realize the justice of imposing an additional tax on lumber because a duty is imposed on pulp wood. Let each industry stand upon its own footing.

Reverting to the changes made by the Finance Committee, the duty on shingles is reduced from 30 to 25 cents per thousand, and clapboards are taxed at $1.50. The rebate clause, under which a refund of a portion of the duty was made on such lumber as was manufactured into boxes and shipped to foreign countries, is abolished. These constitute the most important changes.

While it is by no means probable that the bill will become law in its present form, there is, nevertheless, a possibility that Canadian lumber entering the United States will be subjected to a duty, whether great or small. It therefore behooves our lumbermen to take early steps to place themselves in a position independent of the United States market, as should the Dominion government see fit to impose an export duty on

saw logs, it would certainly mean the closing of our markets to the greater portion of our lumber.

The letters from prominent lumbermen printed on another page are worthy of the consideration of the trade. Hon. J. B. Snowball, probably one of the best informed lumbermen in Canada, points out that in may foreign countries there are splendid openings for the extension of the Canadian lumber trade, particularly in manufactured and partially manufactured stock. Instead of our lumber finding a market in the United States, it would be shipped abroad and would replace the lumber which is now shipped from that country to the foreign markets. With the raw material at our door, it seems strange indeed that the United States should export over four times as much lumber to foreign countries as Canada. But two essentials are necessary before any great development can be expected, namely, the investment of considerable capital in manufacturing plant, and a better acquaintance with the requirements of foreign markets.

## EDITORIAL NOTES.

Many of the methods adopted by our American cousins for the extension of trade and a better acquaintance of their customers are worthy of the consideration of Canadian lumbermen. We note that arrangements are being completed for an excursion of eastern retail lumbermen to the Pacific coast, with the object of inspecting the timber of that section of country, much of which finds a market in the Eastern States. The party will leave Minneapolis on the 21st of July, and will be entertained by the Puget Sound lumbermen.

It is a significant fact that manufacturers who have felt the sharp edge of competition to the least extent are those whose mills are equipped with improved machinery and appliances. There are manufacturers who are running along year after year with an equipment which may have been considered modern twenty-five years ago, but for which there is no place at the present day. They cannot understand why their neighbor can undersell them in the same market, and under precisely the same conditions, but the secret frequently lies in the adoption of up-to-date machinery, by which the maximum of production is attained at the minimum of cost. During hard times the tendency is no doubt towards a curtailment of expenses, but money spent in cheapening the cost of production is at all times money saved. The live manufacturer is constantly on the watch for new ideas.

The adoption of an alien labor law by the Canadian government, which at time of writing seems probable, is a step in the right direction. While not in accord with the principle involved, we believe the government of this country is fully justified in taking such action, in view of the unfair treatment which has been accorded Canadians by the United States government. The bill as framed only applies to such countries as shall enact a similar law. So far as the lumber industry is concerned, the bill is certain to be in favor of Canadian workmen, as a very large number of men are brought each year from Michigan to work in the lumber woods in the Georgian Bay district. In the maritime provinces the situation is different, and probably as many Canadians find employment in the woods of Maine as there are Americans engaged to work on the Canadian side.

The contention of American manufacturers that lumber was produced in Canada much cheaper than in the United States has been somewhat shattered by a report made by the Labor Commissioner of the United States, showing the cost of production in the two countries. The statistics were compiled from the books and pay rolls of lumber concerns in the Ottawa district on the one hand and in Wisconsin and Minnesota on the other. While the average wages in saw mills in the United States are shown to be $1.71 per day, and in Canada $1.41, the average labor cost of one thousand feet is given as 91 cents in the United States and $1.23 in this country. This discrepancy is accounted for by the improved machinery used in the United States. The cost of logging in Canada is also shown to be greater by $1.30, making the actual labor cost of producing one thousand feet $1.60 greater in Canada than in the United States. Add to this the additional price paid in this country for timber limits, and we fail to see wherein American manufacturers have suffered from the alleged "ruinous Canadian competition."

Late reports received at this office regarding the condition of the lumber and shingle trade of British Columbia are of an encouraging nature, and lead to the belief that manufacturers in that province have entered upon a new and more prosperous era. During recent years of general business depression, probably no section of the Dominion, so far as the lumber trade is concerned, has suffered to a greater extent than British Columbia, where the price obtained for lumber has been very little greater than the actual cost of production. And so with the shingle trade. Some manufacturers ceased operating their mills rather than carry on business without even realizing the interest on the money invested. The wisdom of this action is now proven. The market has become bare of stock, and the demand has increased to a point where it is reasonable to expect that more remunerative prices will be obtained at an early date. The foreign trade for the first four months has shown a marked expansion, and is, we believe, capable of still further development. The efforts to re-organize the lumber combine, for the purpose of controlling the foreign trade, have so far proved unsuccessful.

## DOMINION GOVERNMENT TIMBER LANDS.

The timber lands owned by the Dominion government embrace those in Manitoba, the North-west Territories, and within the railway belt in the province of British Columbia. According to the annual report of the Department of Interior, the timber dues collected in this territory in 1896 amounted to $69,646.25, being less than the previous year by $3,504.48. Of the revenue derived from timber, $18,793.96 was for bonuses, ground rents, royalties and dues on timber cut from lands in the railway belt in the province of British Columbia, being a decrease of $4,791.96 as compared with the previous year. The total revenue received from timber in Manitoba and the North-west Territories was $1,128,126.25, and the total revenue from timber within the railway belt in British Columbia up to the same date $294,450.55. During the year 34,817,909 feet of lumber were manufactured from timber cut under license. In the Winnipeg agency, which comprises Manitoba and portions of Assiniboia and Saskatchewan, the following quantities of lumber were sold :—

| | Feet. |
|---|---|
| Canadian pine (from Lake of the Woods) | 42,000,000 |
| Canadian pine (from Fort William) | 2,000,000 |
| Canadian spruce (manufactured in Manitoba) | 15,418,185 |
| United States pine and oak | 11,957,740 |
| British Columbia products (approximately) | 10,000,000 |

Following is a comparative statement of the average prices of lumber within the several crown timber agencies during the past twelve years. The cost of this article to the settler has been very much reduced within that time :—

| Agency. | 1885. Per M. | 1894. Per M. | 1895. Per M. | 1897. Per M. |
|---|---|---|---|---|
| Winnipeg | $13.50 to $25 | $17 | $17 to $19 | $16.45 |
| Brandon | 20 to 22 | 15 | 15 | 13.45 |
| Whitemouth | 11 to 12 | ..... | 10 | 12 |
| Calgary | 25 to 30 | $ 8 to 16 | 8 to 16 | $ 8 to $16 |
| Fort McLeod | 30 | 10 | 10 to 16 | 13 to 16 |
| Lethbridge | ..... | 9 to 16 | ..... | ..... |
| Prince Albert | 30 to 45 | 10 to 25 | 8 to 25 | 8 to 25 |
| Edmonton | 25 to 30 | 18 | 13 to 16 | 11 to 12 |
| British Columbia | ..... | 10 | 7 to 9 | 8 to 10 |

Returns received by the Department give the following quantities of building material as having been manufactured and sold during the year within the five Dominion agencies :—

| | Manufactured. | Sold |
|---|---|---|
| Sawn lumber | 34,817,000 feet | 32,545,721 feet |
| Shingles | 3,615,948 " | 3,438,839 " |
| Laths | 338,083 " | 450,375 " |

The areas licensed in the province of Manitoba, the three provisional territorial districts, and on Dominion lands in the province of British Columbia, are as follows :—

| | Sq. Miles. |
|---|---|
| Manitoba | 658.79 |
| Alberta | 1,308.15 |
| Assiniboia | 95.00 |
| Saskatchewan | 246.54 |
| British Columbia | 370.03 |

The figures below show the annual receipts from timber dues since 1873 :—

| | |
|---|---|
| 1873 | $ 109 25 |
| 1874 | 2,710 55 |
| 1875 | 2,335 25 |
| 1876 | 387 00 |
| 1877 | 320 00 |
| 1878 | 1,620 00 |
| 1879 | 325 00 |
| 1880 | 25,121 46 |
| 1881 | 32,028 34 |
| 1882 | 58,753 14 |
| 1883 | 90,066 46 |
| 1884 | 147,983 10 |
| 1885 | 87,474 99 |
| 1886 | 64,820 31 |
| 1887 | 65,111 74 |
| 1888 | 94,964 55 |
| 1889 | 90,290 00 |
| 1890 | 84,642 95 |
| 1891 | 102,902 71 |
| 1892 | 106,461 35 |
| 1893 | 105,865 24 |
| 1894 | 81,200 51 |
| 1895 | 74,079 20 |
| 1896 | 61,923 47 |

A peculiar inquiry, not a little out of the ordinary, was received recently by the American Clay-working Machinery Company, of Bucyrus, from a business man of Saginaw, Mich. The request was for figures on a machine to mix and pug sawdust into shallow blocks, to be used on the market for fire-kindling. The intention was to mix the sawdust with resin and oil, and after a thorough mixing, to pass it to a brick machine to be pressed lightly into blocks about 12x18 in size, and then cut automatically into slabs an inch or two in thickness. The sawdust fire-kindling of this kind is well known on the market, but the trouble has been that the price is too high. The Saginaw man figures that by taking the sawdust of several of the largest mills and handling it in large quantities he will be able to produce a fuel which may not be limited to kindling alone, but may, by making it more compact and lessening the cost of production, come within the realm of possibility as a fuel block.—Ohio State Journal.

## LOWER QUEBEC AND NEW BRUNSWICK NOTES.

[Correspondence of the CANADA LUMBERMAN.]

THE saw and shingle mills are running full swing now, many of them day and night. The season has been an excellent one for the lumbermen, notwithstanding the fact that the snow they looked for in December and January did not put in an appearance till about the first of March, but then they made the best possible use of it, with the result that a full supply of logs was got to the streams ready for stream driving. The large quantity of snow, with some rains, made the streams in good shape for driving, and nearly all the logs cut will reach the mills during the spring freshet.

S. W. Teed has taken the shingle mill at Fort Ingalls, Que., on the Temiscouata railway, and is sawing for James Hoyes & Co. He will run day and night all summer, sawing with two machines. The mill is lighted by electricity, and has a capacity of from sixty to seventy thousand per twenty-four hours.

James Hoyes & Co. have a mill at St. Louis, Que., where they run constantly winter and summer, day and night, sawing shingles, the better grades being shipped to points throughout the Eastern States.

George St. Pierre & Co., of Fraserville, have a gang, circular and shingle mill at St. Honore, Que., on the Temiscouata railway, the saw mills cutting deals principally for English markets.

J. J. Wheelock has bought the Connor's saw and shingle mill at Connor's Station. There is a circular saw and five shingle machines in the mill, which is running to its full capacity. Mr. Wheelock also has a saw mill across the St. John river from Connors in the state of Maine, the stock from which is shipped from Connors to eastern states points, via the Temiscouata railway.

The Kennedy Island Lumber Co. have a fine circular saw and shingle mill near Clair station, on the Temiscouata railway, which was built last summer, and is splendidly situated for getting logs from the St. John river, the product being loaded directly on the car. Mr. Thos. Crockett is the manager and one of the owners of the mill. Mr. Crockett is also manager of the Temiscouata railway, the connecting line between the river St. John, in New Brunswick, and the St. Lawrence river, in Quebec. This railroad also connects the C. P. R. at Edmundston with the I. C. R. at River du Loup, a distance of 87 miles. The road also continues up the St. John river from Edmundston to Connors, some 32 miles.

Joseph Lavoir, Bic, Que., has a fine circular and gang mill, with double edger and re-sawing machine. Mr. Lavoir will this season saw about one hundred thousand logs into deals for the English market.

The Rimouski Lumber Co., of Rimouski, Que., have a water-power circular mill, in which they will saw about sixty thousand logs, a portion into English deals and the remainder into American specifications. They also have a fine shingle plant of ten machines, which they keep fully employed. Mr. Carlton is superintendent and Mr. J. A. Talbot agent.

At St. Moise N. Cayouette has a shingle mill which runs day and night the year round. He is building up a nice village around the mill, which is about one mile from St. Moise station on the I. C. R. F. R. Morneault & Co. have a shingle mill at the lake, three miles east of St. Moise, which runs continually. The product is shipped to western points. Two miles further east E. Bellavance has a circular saw mill and two shingle machines operating throughout the whole year.

At Sayabec John Fenderson & Co. have a saw and shingle mill. The saw mill consists of a fast cutting circular, with double edger and patent trimmer, lath machine, etc. In the shingle department there are five machines which run constantly from early spring till late in the fall. Mr. Fenderson is a New York state man and is well up in the shingle business. Mr. Ahearn, of Ottawa, is bookkeeper. The mill was built by Macpherson & Schell, the well-known mill-owners of Alexandria, Ont., from whom Messrs. Fenderson & Co. purchased it, together with the larger timber limits, about three years ago.

Messrs. King Bros., Ltd., of Quebec city, have a fine circular saw mill at Cedar Hall station, on the I. C. R. It is situated near the station, and the logs are taken from the lands surrounding the lake. The firm own the timber all around the lake for a distance of three miles. The lake is about fifteen miles long and three miles wide. The output is deals, which are shipped from Dalhouse, N. B. Mr. Nolan is resident manager. King Bros. have a number of parties sawing shingles for them at different points in the vicinity, shipment of which is made from Cedar Hall, Sayabec and other stations of the I. C. R.

Messrs. Price Bros. & Co., of Quebec, have a large gang and circular saw mill at Amqui, one mile from Amqui station, where they saw about seven million superficial feet of English deals, which are shipped from the port of Dalhousie, N. B. They have also a large shingle mill about two miles distant, in which they saw large quantities of shingles. Mr. Smith is resident manager. M. Blacquire, St. Alexis, Que., had his mill burned in April. It was a circular saw and shingle mill with three machines. He will probably rebuild. F. Stancliffe, Flatlands, N. B., runs three shingle machines day and night, under the management of David Inglis.

A. E. Alexander has a circular mill and two shingle machines running during the winter and spring at Tobique, six miles from Campbellton. He has a large shingle mill at Campbellton which he runs during the summer, and which contains thirteen machines. Mr. Alexander is in his sixth term as mayor of the town of Campbellton, which speaks well for his ability.

Kilgour Shives is making some changes and improvements in his saw and shingle mill at Campbellton. He has added an engine of 100 h. p., changed the location of his boilers, put in patent furnaces, a new gang, new circular saw rig, patent log chain haul up and live roll bed, as well as improved his shingle bolting department. These improvements make a very complete and convenient mill. Mr. Shives saw the necessity of a machine for cutting up, at the least possible expense, the refuse edgings and slabs into fire wood stove lengths, and devised one to suit his own conditions, which does the work admirably. He has made some for other mills and may possibly add the manufacture of these to his already extensive lumber business. He expects to saw from eight to ten million feet of deals during the season. David Richards, Campbellton, N. B., runs shingle and clapboard machines, getting his logs sawn into deals in mills owned by J. D. Sowerby, Oak Bay, Que., and W. W. Doherty, Campbellton, N. B.

George Moffat, Dalhousie, N. B., has a gang mill, in which he saws six to seven million feet of deals. He also has resaws, lath machine and planer. Mr. Moffat can load any size ship or steamer direct from his mill wharf.

George Montgomery, Dalhousie, is building a new mill having circular saw and shingle machines, which will be ready to start early in June. The machinery is made by the Waterous Engine Works Co., of Brantford. A. G. Wallace, Dalhousie, has a shingle mill, running two machines, and saws summer and winter.

J. & P. Nadeau, Grand Caspedia, Que., have a circular saw mill and three shingle machines. The Caspedia Lumber Co., of Maria, Que., have a fine gang and circular saw mill, built last year. This mill ran only a short time last season, and a quantity of logs were left over. The firm expect to saw from ten to twelve million feet this season. Mr. A. Charlebois is the president of the company and Mr. C. H. J. Maguire the secretary, the office being at Quebec.

Wm. Currie & Co., Eel River Crossing, N. B., has a circular saw and shingle mill which runs day and night, having electric light. Gray & Lawrence Bros., Charlo, have a fine shingle mill of six machines, which runs continuously except in the winter time.

Messrs. Adams, Burns & Co. bought the property of the St. Lawrence Lumber Co. at Bathurst, N. B., and are doing an extensive business, cutting from six to eight million feet. They also have mills at Burnsville, on the Caraquet railway. Mr. P. J. Burns is the superintendent. Messrs. Sumner Co., Moncton, N. B., have a gang mill and two shingle machines at Bathurst village. This mill was thoroughly rebuilt last year, and is now complete. Mr. Frank Curran is the efficient superintendent.

At Newcastle, N. B., Messrs. D. & J. Ritchie have rebuilt on the site of their mill burned last season. It is a two gang mill, complete with all modern appliances for hauling logs and lumber quickly and economically. One very material point kept in view in re-building was to make the mill absolutely fireproof, and in this they appear to have succeeded.

Messrs. Richards & Hickson, of Newcastle, have a one gang mill and four shingle machines, with a capacity of eight million per season. Mr. W. E. Hickson is manager. Clark, Skillings & Co., of the same place, make a specialty of spool wood, which is sawn from white birch. The company seem to have acres of ground covered with the sawn squares piled up to dry. Mr. C. D. Manny is the manager. The firm's headquarters are in Boston. The spool wood is shipped, after drying, to Glasgow, Scotland, the headquarters for thread.

Sargeant Bros., Nelson, N. B., have a gang mill in which they saw a large quantity of logs into deals, also lath, staves, heading and box boards. George Burchill & Sons, Nelson, have one gang and lath machines and small box machinery. T. W. Flett has a gang mill and box factory. E. Hutchinson, Douglastown, N. B., operates a one gang mill, with lath and box board machines. All these mills have a capacity of sixty to seventy thousand feet of deals per day, and usually run from spring until fall. The ships load at the mills.

J. B. Snowball, Chatham, N. B., has a fine three gang mill, with a full equipment of small machinery for manufacturing the refuse into laths, pickets, palings, box boards for lobster canneries, etc. This is the second largest saw mill in the maratime provinces. Mr. Snowball has a large machine shop as well, and a large gang and circular saw mill at Tracadie, some fifty miles up the coast. He is one of the most progressive lumbermen in Canada, and is also a senator. While attending to his outside business his son, Mr. W. B. Snowball, ably fills the position of manager, while each department of his immense business is under the direction of an efficient head.

William Richards, Chatham, is also an extensive and successful lumberman. He has a large two gang mill in Chatham, and supplies several of the large saw mills on the Miramichi river with logs, handling from thirty to forty million feet per year.

George I. Vaughan, Black Brook, N. B., last year bought the mill property and timber limits formerly owned by Guy, Bevan & Co. He is cutting about eight million feet this season. The Maritime Sulphite Fibre Co., Chatham, use in the vicinity of twenty thousand cords of wood in the manufacture of pulp.

W. J. P.

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## THE QUESTION OF LOG SCALING.

WAKEFIELD, QUE., May 3rd, 1897.

To the Editor of the CANADA LUMBERMAN:

SIR,—In regard to the scaling of logs, and the letters published in your journal of April and May, I desire to say that the government cullers, or the wood rangers, appointed to check and look over the operations of lumbermen in the different districts and provinces, cannot measure every log, for the simple reason that their districts are too large, and they have not sufficient time to do the work in a minute way. Therefore, they can simply measure a sample of logs on the skids in the bush during the fall operations, and again on the ice or banks of the streams. All experienced lumbermen will agree with me that except the logs are rolled, it is impossible for the government wood ranger to cull the logs and allow for defects, rots, etc. Mr. R. A. Johnson's clause in his letter of May, showing "How logs should be measured," is quite reasonable, and is the only rule left for wood rangers to adopt under the system at present adopted by the government.

The lumbermen's scalers, who are supposed to be sworn cullers with a certificate and license from the government, measure and cull the logs; they are as a rule placed in charge of one or two camps only, and have ample time to watch the operations very closely, and can even measure the logs almost as fast at they are manufactured. They have a good opportunity of observing the defects, as in many cases they see the trees being felled, and also from day to day study the general quality of the pine in the particular district in which they are placed for the year's operations. Therefore, I consider that if the scaler who represents the lumberman is an honest man, abides by his oath of office, and is true to the government license he holds as a culler, he will do justice both to his master and the Crown.

I would suggest that the government employ more wood rangers, placing a wood ranger in charge of one, two, or three camps at the most, and measure every stump and every pine top belonging to that stump that the lumberman would cut down, as well as establish a scale of duty lower than the present one. This would be the saviour of the pine forests. It would place the brakes on all friction between government and lumbermen; it would make the lumbermen employ more experienced log makers, and wastage of pine would be out of the question. It would also have the effect of making the multi-millionaire kings of our forest study the utility of the coarser grades of pine. In fact, the Crown would reap almost an unknown benefit, in which our farmers and laboring people would derive a very fair share, and the lumbermen would solve the problem of manufacturing at home the coarser grades of pine at present wasted and left in the woods.

Yours truly,

J. D. ROCHE,
Forest Ranger.

# THE RETAILER AND Wood-Worker

## MR. WILLIAM EDWARDS.

We have pleasure in presenting to our readers the accompanying portrait and particulars of Mr. William Edwards, lumber dealer, of Brantford, Ont. Mr. Edwards was born in London, England, in the year 1851. After leaving school and engaging in different branches of business there, he resolved to remove to Canada, arriving here in 1872, and after visiting different parts of the country decided to locate in Brantford, embarking in the lumber business. Under his able management his trade has grown to large dimensions, and now embraces lumber, cement, coal and wood. By a visit to his yards and mills, situated at the corner of Grant and Winnett streets, West Brantford, the visitor will find them commodious and well equipped. The mills are furnished with the latest machinery and every convenience for handling his large trade, all departments being in a high state of efficiency. The shipping facilities are excellent, tracks running into the yard. Mr. Edwards' yards are well stocked with the different grades of lumber demanded by his extensive patronage. He makes a specialty of hardwood lumber, in which his dealings extend over a large part of Canada. His coal, wood and cement business is also extensive.

During his business career the subject of our sketch has been largely interested in timber limits

Mr. William Edwards.

throughout Ontario, his judgment of standing timber being well known among lumbermen as very accurate, and his services being often in demand as a valuator. He has handled a number of limits in different parts of the province, converting the standing timber into lumber with portable saw mills, and giving employment to a large number of men.

Mr. Edwards is held in high esteem by his fellow townsmen. He has unbounded faith in the future prosperity of Brantford, having already invested considerable money in real estate. His staff of employees are at present very busy in getting out the first consignment of lumber for the city contract, which he has again secured this year for the third time.

With an active and vigorous m ind and body, Mr. Edwards attends to all of the many details of his business, giving it that keen supervision which has made his business ventures so uniformly successful. His kindness of heart and courteous manner has procured him many friends in all parts and among all people with whom he has been brought in contact. He is an old subscriber to The Lumberman, and states that the perusal of its columns is always a pleasure, and that no up-to-date lumber dealer can afford to be without it.

## BREAKING SHINGLE BUNCHES.

How much money has been made, or rather lost, in the selling of a part of a bunch of shingles? The aggregate would no doubt be large if it was only known. I never yet met a man, aside from those who were, or had been in the business, that knew what a shingle was, says C. H. Ketridge, in the Mississippi Valley Lumberman. A shingle was a shingle to them, whether it was wide or narrow, and for that reason this one item in the details of retailing lumber is the cause of much dissatisfaction on the part of him who wants so many shingles and thinks the dealer is beating him in his charge for them. It is generally known that 250 of them make a bunch; they figure it out that way because four bunches make a thousand, and if you give a man two or three dozen of loose shingles it takes a good proportion of a bunch. Most dealers are in the habit of guessing at the value of them, but it rarely suits the buyer. I have a way of getting at this that suits me.

It is an accurate way of getting at it, and it can be shown to the buyer as a fair one. Instead of pulling them out of the end of a bunch, I break the band and take them from the top as they are packed. I then count the layers that are left, and charge the buyer for that per cent. of the bunch I have given him. To illustrate, there are twenty-five layers in a bunch. Supposing a customer wants two dozen, this will take on an average five layers, or one-fifth of the bunch. If you sell them at the rate of seventy-five cents a bunch your charge for this part of it will be fifteen cents. This is an easy method of counteracting any charge of unfairness a buyer may make. He can see that you have charged him only for a just proportion of the value of the whole bunch. This is one of the many little things that goes toward the holding of your trade, for the probabilities are that by the overcharging of only a few cents you might lose the sale of several thousand shingles when the man has to shingle his whole roof.

## MESSRS. HAWES & MATCHETT.

Situated on Ross street, in the city of St. Thomas, Ont., is the planing mill and factory of Messrs. Hawes & Matchett. This firm are among our leading wood-workers and contractors, and from their well-stocked yards supply a large quantity of lumber, principally to the local trade. Their planing mill, of which we give an illustration, is equipped with modern machinery, making it possible to produce goods at the lowest possible cost. Twelve years have elapsed since the organization of the firm, during which time a steadily increasing trade has been the result of energy coupled with business ability.

Mr. S. Hawes, the senior member of the firm, was born near London, Ont., in 1846, and after leaving school engaged in several minor mercantile lines before commencing his present business. Mr. Hawes was elected alderman for three successive years, then refused further nomination, is a member of the Oddfellows' Society, and is well-known and highly respected.

Mr. Edmund Matchett, the junior member, was born in the county of Haldimand in 1852. He learned the carpenter trade, and in 1880 engaged in the contracting business in St. Thomas, forming his present partnership five years later.

The trouble with too many in the lumber and shingle business is that they figure too much on their profit and forget their expense. They fail to remember that the profit side will take care of itself if the expense account is all right.

Wood veneer is used to some extent for doing up bundles, instead of paper. Curtain pole manufacturers, for instance, when shipping or delivering poles in small lots, wrap them up in veneer. It costs a little more than paper, but not much, and it is much better for the purpose. Poles thus wrapped up are less likely to be creased by the cords tied around them, and the veneer is a better protection from bruises in handling. The veneer used for this purpose is usually of elm wood and made in the same factories where the poles are made. Veneer is also used for wrapping picture mouldings.

## LETTERS FROM THE TRADE.

PROMINENT LUMBER MANUFACTURERS EXPRESS THEIR VIEWS OF THE PROPOSED LUMBER DUTY.

WITH a view of ascertaining the opinions of Canadian lumbermen regarding the effects of the United States import duty of $2 per thousand feet on sawn lumber, as provided by the Dingley bill recently reported by the Finance Committee to the Senate, letters were sent to a number of manufacturers in the different provinces of the Dominion in which the following questions were asked :

1. To what extent would such a duty injure the Canadian lumber industry ?

2. What action should be taken by the Canadian government in case such a duty is imposed on lumber by the United States ?

3. What class of lumber would be affected to the greatest extent ?

4. Presuming that we are compelled by the duty to abandon the United States markets, what methods would you propose for the extension of our lumber trade with Europe and other foreign countries ?

For some reason, which we hesitate to attribute to a lack of interest in a question so directly affecting their own interests, some manufacturers to whom a letter was sent failed to respond. The replies received are printed below :

MIDLAND, ONT., May 20th, 1897.

DEAR SIR,—Replying to your four questions respectively our views may be summed up as follows :

1. The passage of the clause relating to a $2 import duty on lumber would paralyze the industry in Georgian Bay and Muskoka districts.

2. 1st, put a similar duty on all American lumber coming into Canada. 2nd, give the United States government to understand that the Canadian government deems it a breach of faith, considering the agreement entered into between the late Sir. John A. Macdonald and Hon. Jas. G. Blaine, whereby the duty was taken off logs, to take the stand they are now doing. We should intimate to them that if the Dingley bill is carried out the duty on logs will be reimposed, or if the Canadian government should not be willing to do that, lumbermen should endeavor to bring sufficient pressure to bear on the Ontario government to forbid logs being taken from the country, which, we understand, they have the power to do.

3. Common lumber.

4. That Canada should send agents, thoroughly posted in the lumber business, to different countries of Europe for the purpose of working up trade in this industry and keeping the government posted, and through them the manufacturers, as to condition of trade, necessities, etc. We trust that in case the Americans do not conclude to reduce the proposed import duty to $1.00 per M., such measures will be taken by our government as will protect our interest in this behalf.

Yours truly,

CHEW BROS.

PENETANGUISHENE, ONT., May 13th, 1897.

DEAR SIR,—In reply to your recent letter on the lumber tariff question we are glad to give you our views, and consider the matter a most important one :

1. Such a duty would simply mean the exclusion of our coarse grades from the United States.

2. As a $2.00 duty would exclude our coarse lumber, and we have a good market in England for the better grades, and the Americans if they want them must pay the advanced price, it would be to the benefit of lumbermen and the country at large to prohibit the exportation of saw logs, pulp wood and hemlock bark. As we have almost a monopoly of the pulp wood there is no doubt that if it is manufactured largely here considerable English capital will be attracted to this country. In regard to hemlock bark, it is almost a sin to allow the hemlock to be slaughtered as it now is, when there is a small market for the timber, and so much of it is slashed down and allowed to rot in the woods in order to furnish bark for the Americans, when no doubt in a few years the timber would be valuable if cut only in quantities sufficient to supply bark for our own tanneries. Any one taking a trip through our hemlock woods must realize the truth of this.

3. Coarse grades only.

4. At the present time there are large quantities of Canadian lumber manufactured in the United States into box shooks, etc., and shipped to South America, the West Indies and Europe. Our government, for one thing, should send agents to these countries and divert considerable of this trade to us.

THE C. BECK MANUFACTURING CO., Ltd.

BRACEBRIDGE, ONT., May 20, 1897.

DEAR SIR,—In reply to yours enquiring as to my opinion regarding the lumber tariff, I would say, by all means put an export duty on Canadian logs equal to the import duty on lumber going to the United States, and in my opinion the sooner our government takes this step the better. The export duty on logs should take effect just as soon as the duty on lumber comes into force. We should also impose an export duty of $2.00 per cord on all Canadian pulp wood going into the United States.

Now, I believe that if our Canadian government takes steps firmly and decisively, we will not hear much more about the duty on lumber and shingles. This step should be taken at once, and if the United States government should increase the proposed duty on lumber to the amount of the export duty on the raw material from Canada, there will then be plenty of time to back down, but to back down in the face of a bluff would simply prove disastrous to the Canadian lumber trade in general. I am sorry, indeed, to hear some of our lumbermen talk as though they would be willing to submit to an import duty for fear that the American people would increase such duty in addition to the already proposed $2.00 to the amount of the export duty on raw material. This, to my mind, is a matter of great importance to Canadians, and should be dealt with firmly. We are in a position to do as well without their trade as they without our timber. We have the Americans to blame for the hard times in the Canadian lumber business at present, as it was they who increased the price of stumpage on our timber.

Personally, I am willing to give our American friends equal footing in the trade, but I do protest against paying them tribute and then let them take away our raw material free. I fail to see how, as a loyal Canadian people, we can support any administration that will allow us to be imposed upon in any such manner.

Yours truly,

J. D. SHIER.

HEPWORTH STATION, May 22nd, 1897.

DEAR SIR,—Replying to your recent circular asking what effect the Dingley bill will likely have on our Canadian lumber industry, I beg to say that, in my opinion, it will in no way injure us, under present existing conditions, as far as the hardwood lumber industry is concerned. In the first place, when lumber was made free, we submitted to a reduction in price equal to the amount of the remitted duty of $2 per M. Now, when the Americans see fit to reimpose this duty, are we not entitled to again add this amount to our prices. As far as the hardwood trade goes, I can safely say that any duty our neighbors see fit to impose cannot make trade much worse than it has been for the past three years. There has been no money in the trade with the United States for this period of time. In a conversation recently with a large exporter of Canadian hardwoods, he declared there was no money for him in United States markets, and that he did not care how high they made the import duty, and I am of precisely the same opinion.

Regarding pine, the duty will no doubt for a time injure this branch of the lumber industry, especially in the lower grades, but not to so very grevious an extent that we need to crawl on hands and knees to beg that this duty be not imposed. The tariff is a weapon that is as free for the use of our people as our neighbors. They have thrown down the gauntlet, and if our government do their duty, and I think they will, by striking back good and hard, and placing an export duty on pine saw logs and pulp wood, these coercionists will conclude that they have gone on the wrong track. They want our lumber, our pulp wood, and our saw logs. Let us make them pay for them. They are a good asset, all of them, and if we don't sell to-morrow or the next day they are good things to keep in stock, and it is only a matter of time when our neighbors will realize the fact that our pine is an actual necessity among them. England, Germany and France are all looking towards America, and Canada in particular, for forest products. I regret to observe, however, that the bulk of the wants of these countries are being supplied through American channels, and often are the products of Canadian forests bought by American middlemen and sold again in the markets of Europe.

Whatever evil results may temporarily accrue to the lumber industry through the reimposition of this duty, pine will undoubtedly suffer most. It will not materially affect hardwoods. Better prices, with no closer inspection, can be realized in European markets for our hardwoods than can be obtained in the United States. True, the paths of commerce between here and Europe are not so well trodden as they are to United States markets. This feature can soon be overcome. Let the lumber producer familiarize himself with European methods and learn the wants of European markets, and then carefully manufacture the timber to suit those wants, and if he succeeds in producing a suitable article he will never regret being closed out of American markets. An organized effort should be made by the hardwood lumber dealers or producers to have lumber cut in our Canadian mills to suit European consumers, and to familiarize the trade generally with the various details of railway and ocean freights and to learn the most advantageous routes to forward their goods by, and whom to forward to, for I have no doubt there are as reliable commission men to be found in England, Germany and France as there are in the United States.

Yours truly,

J. E. MURPHY.

CHATHAM, N. B., May 14, 1897.

DEAR SIR,—In answer to question No. 1, I think the injury would be only temporary, excepting, it may be, in laths. I do not know any other market for any large quantity of them.

2. The Canadian government should put an export duty on saw logs and pulp wood, the latter to amount to almost a prohibition of its export, so as to allow the small trees to mature and make good logs. Each year's growth in a good healthy forest would add at least ten per cent. annually to their value.

3. Principally laths.

4. I do not think anything can be done to largely increase our exports to Great Britain. We already consign more to that market than circumstances justify, and unfortunately keep it so crowded that an advance in price is almost impossible. We could, however, cultivate with profit the South American, West Indies, South African, Canary Islands and other such markets with rough sawn and other more fully manufactured stock, such as doors, sashes, frames, small boxes, etc., that are now largely bought from the United States, and on which the extra duty imposed by them will make dearer (if protection is a reality) and enable us to successfully compete. Orange, lemon, banana, fig, date, tomato and other small boxes are wanted by the million, and a profitable business can now be done in them, if any person would embark in their manufacture. The United States have done some of this business, but it has been entirely neglected by Canadians so far as I am aware.

My policy would be to carry the war into the enemies' camp by invading their present markets, which we can well do, having the cheapest stock to manufacture from.

Yours truly,

J. B. SNOWBALL.

AMHERST, N. S., May 19th, 1897.

DEAR SIR,—We beg to reply to your four questions asked in your letter re United States lumber tariff as follows :

1. In the lower provinces we should say that the producer would be injured $1.00 per M, or half the duty on long lumber, and probably the full amount of duty on laths and shingles.

2. As to the action Canadian government should take in case this duty becomes law, we think our government should put an export duty on saw logs of $2.00 per M feet board measure, as well as an export duty on pulp wood of say $2.00 per cord.

3. The classes of lumber most affected in the lower provinces would be spruce and hemlock, also cedar shingles.

4. As to what methods the Canadian lumber trade should adopt to open up new markets, in our opinion we would lose nothing in the long run if compelled to abandon the United States markets. The United States are also exporters of lumber, and their lumber dealers handle large quantities of Canadian lumber for export. If Canadian lumber merchants would visit foreign markets, study the requirements of the different countries, and form good connections, Canadian lumber would net more per M to the producer than it does now, and the merchants or middle-men's profits would be enjoyed by Canadians instead of Americans.

Yours very truly,

RHODES, CURRY & CO., LTD.,
N. Curry, President.

CONDITIONS OF SALE.

The above limits will be adjudged to the highest bidder on payment of the purchase price in cash or by cheque accepted by a duly incorporated bank. Failing payment they will be immediately re-offered for sale.

The annual ground rent of three dollars per mile, with fire tax, is also payable immediately.

Those timber limits, when adjudged, will be subject to the provisions of all timber regulations now in force or which may be enacted hereafter.

Plans of limits offered for sale are opened for inspection in the Department of Lands, Forests and Fisheries, in this city, and at the office of the Crown Lands and timber agents in the different agencies in which said limits are situated, up to the day of sale.

N. B.—No account for publication of this notice will be recognized, if such publication has not been expressly authorized by the department.

G. A. NANTEL,
Commissioner of Lands, Forests and Fisheries.

## LAND SALES.

Quebec, 15th May, 1897.

Notice is hereby given that the water powers hereinafter mentioned will be offered for sale at public auction, in the sales room of the Department of Lands, Forests and Fisheries, in this city, on TUESDAY, THE 15TH OF JUNE NEXT, AT HALF PAST TEN A.M., at the upset price hereinafter mentioned :

The "water power" formed by that portion of the river Ottawa, opposite the township of Onslow, at the rapids and falls called Des Chats, together with the islands lying therein situate within the limits of the Province of Quebec, at a distance of four miles from Quyon Station, Pontiac Pacific Junction Railway. Upset price : $35,000.

The water power formed by the river Ottawa, situate in front of lots 14, 15 and 16, 1st range of township Litchfield, at the Grand Calumet falls, with the adjacent islands, the whole lying at a distance of three and a half miles from Clarke Station, P. P. J. Railway. Upset price : $6,900.

The water power formed by the river St. Maurice, at the Great Shawenegan falls, with the islands lying therein and being within a distance of one mile from the line of the Great Northern Railway. Upset price : $10,000.

The sale of the water power of Des Chats to be subject to the following reservations, that is : That the Upper Ottawa Improvement Company will retain the enjoyment and possession of all the works, slides, dams, piers and booms which they have constructed for the purpose of floating logs and timber at the Sturgeon Falls and the use of the north Channel of Black Chute, with the right to repair and have access to the same when required.

The whole as designated on the plans depesited for the information of intending purchasers, in the Department of Lands, Forests and Fisheries, Quebec, and at the agent's office at Hull

The upset price as above is based on valuation derived from special inspection and study.

CONDITIONS OF SALE.

The above water powers will be adjudged to the highest bidder on payment of the purchase price in cash or by cheque accepted by a duly incorporated bank. Failing payment, they will be immediately re-offered for sale.

N. B.—No account for publication of this notice will be recognized, if such publication has not been expressly authorized by the department.

G. A. NANTEL,
Commissioner of Lands, Forests and Fisheries.

Berths Nos. 512 @ 517..... 300 miles.

Terms : Cash, or ½ cash ; balance on time, with interest.

C. M. BROCKLESBY,
Commission Merchant and Mining Broker,
10th May, 1897. 119 St. Peter St., Quebec.

## CURRENT TRADE CONDITIONS.

ONTARIO

Business in the lumber trade is less active at the present time than earlier in the month. Some lumber is being shipped to the United States, but since the passage by the Senate Committee of that country of the tariff bill imposing a duty of $2 per thousand on lumber, the trade has been somewhat unsettled. Buyers on the American side invariably ask for quotations delivered at certain points across the border, and unless the stock is shipped immediately, the Canadian dealer leaves himself liable to pay the duty. This has a tendency to confine business to such orders as can be filled at once. Trade in the Ottawa district is reported to be fair, all the available barges being engaged. The logs are making good progress in the rivers, and very few, if any, are likely to be hung up. Along the line of the Ottawa, Arnprior and Parry Sound Railway operations are brisk, and the cut of timber this season has been very large. A recent visitor to Long Lake and Canoe Lake estimates the output in the vicinity of the road at five hundrek million feet, but this we believe to be an excessive calculation.

QUEBEC AND NEW BRUNSWICK.

Shipping is now very active at the ports of Montreal and Quebec, and every effort

is being made by shippers to place goods upon the British market. Spruce deals are very firm. Charters from Montreal have been made at lower rates than earlier in the season. The deal market at St. John is easier, and quotations on both spruce and birch have dropped about fifty cents. The demand from the United States shows little life, but manufacturers are looking more to the British trade, and are becoming less dependent on the American markets. The drives are coming along well, but some small quantities have been hung up.

MANITOBA AND BRITISH COLUMBIA.

Prospects continue bright for the lumber trade of British Columbia and Manitoba. The mills are working to their full capacity to fill orders, which continue to come in liberally. Prices remain stationary, with a tendency to harden. There is an increasing call for shingles, and the lower rate on these for shipment to the east is likely to further improve the demand.

UNITED STATES.

Lumber purchases by United States dealers are confined to stock required for the immediate wants of customers. Very little speculation is observable in transactions, while no attention is being paid to stocking up yards. Some large sales of northern pine have been made, but dealers realize that the stock will be required for their regular line of customers. The volume of spring business throughout the country is about equal to that of one year ago, but in the Eastern States there has been a greater demand. Prices, however, are rather lower for most grades, especially the poorer qualities of pine and hardwoods. Oak is stronger, and in constant enquiry. Some encouragement is afforded the trade by the improved collections, which would go to show that money is easier. At Buffalo trade is only fair. Barn boards are scarce and prices strong, while low grade pine meets with slow sale. There is a decided scarcity of elm at that point, while ash, basswood and maple show little life. Pine and hemlock are selling well at Philadelphia, but at New York the pine and spruce trade is unusually dull. Dealers are purchasing in very small quantities.

FOREIGN.

Generally speaking, the lumber trade of Great Britain is in a healthy condition, with a specially good demand for oak timber, waney pine, spruce and pine deals. Special sized red pine and spruce deals, such as 2″ x 7″ and 2½″ x 7″ are particularly enquired for. So far as shippers are concerned, very few transactions are heard of, as a large proportion of the stock to arrive during the summer months has been sold. Arrivals of spring goods at several ports are reported, included in which has been a very large quantity of spruce deals from the maritime provinces. At Liverpool and Manchester orders for square timber and deals are being booked freely, outdoor operations being stimulated by favorable weather. This is also the situation at Hull. All classes of goods, with the exception of flooring, are said to be advancing at London, notwithstanding that a large quantity of goods has lately been offered by auction. Birch timber sold at 45s a load at Glasgow. Quebec deals are in short supply, and first-class waney pine timber is wanted. The latest advices from South Africa state that the timber trade there is dull, and orders show a decided shrinkage.

## STOCKS AND PRICES.

CANADA.

L. B. Knight has got out 5,000,000 feet of logs for his mill at Musquash, N. B.

Mark DeCew, of Essex, Ont., is shipping a quantity of staves and lumber.

The Dominion Bank mill at Lindsay, Ont., was sold last week to S. G. Parkin, of that town.

The drive of George H. Vaughan, of Black Brook, N. B., containing 13,000,000 feet, is in safe waters.

Twenty-two vessels have been chartered to load lumber at Shediac, N. B., this summer, Messrs. McKean and Mackay, of St. John, being the principal shippers.

A tow of logs, containing three quarters of a million feet, recently arrived at Orillia, Ont., for A. Tait's mill.

The Ottawa Lumber Company's mills at Calumet, Que., commenced sawing on the 19th inst., with a staff of 250 men.

The Calvin Co.'s No. 4 raft and the Collins Bay Rafting & Forwarding Co.'s No. 1 raft are now due at Quebec, and will probably arrive within the next day or two.

The square timber belonging to Wm. Mackie, of Pembroke, will be loaded on the cars at Eau Claire and taken by rail to Papineauville, from whence it will be rafted to Quebec.

Steamship Greta-Holme is discharging in the Louise basin, Quebec, a consignment of steel rails for the new electric road, after which she will load a cargo of lumber for Europe.

N. N. Bently, of Five Islands, N. S., has purchased the lumber property of Hill & French at Ship Harbor. The area is about 25,000 acres, and the price paid in the neighborhood of $35,000.

There is now said to be 450,000 cubic feet of timber on the lakes en route to Garden Island, where it will be rafted for Quebec. The Calvin Company report the season thus far to be very active.

The steamship Malin-Head, after taking on board portion of cargo at Indian Cove, Quebec, proceeds to Montreal for another portion, after which she will complete loading at Quebec, for Dublin.

Ship Erling is now at Three Rivers, loading a cargo of deals for Messrs. Dobell, Beckett & Co. The steamship Greylands left this port on Sunday morning, after completing cargo for United Kingdom.

Messrs. H. R. Goodday & Co. have acquired the property in Quebec known as the Priests' Wharf, where they are now loading the steamship Starlight with a cargo of spruce deals, etc. for the European market.

The steamship Regina has arrived at Quebec with a cargo of coal from Louisburg, C. B., which she is now discharging and will afterwards load a cargo of timber and deals for Europe, supplied by Dobell, Beckett & Co.

Barque Hoxding is now at Pierreville, Que., anchorage, loading a cargo of spruce deals, &c., which are being supplied by the Tourville Lumber Mills Co. from their mills at Louiseville and Pierreville, on account of Messrs. Dobell, Beckett & Co., of Quebec.

By the breaking away of a large dam on Ponhook Lake, about eight miles from Windsor, N. S., over 3,000,000 feet of logs were carried out to sea. The logs were the property of T. G. McMullen, of Truro, and as very few are likely to be recovered, the loss will be about $100,000.

The tug Traveller arrived at Bay City, Mich., on the 19th inst., with the first raft of the season from the Georgian Bay. It contained over three and a half million feet of logs, which were distributed among the various mills. Another large raft is expected to arrive this week.

A report from Halifax, N. S., states that up to May 12th about 25,000,000 feet of lumber had been shipped from that port this season, and that the total shipments will amount to 80,000,000 feet, eclipsing all former records. The Intercolonial Railway handled in two months over 1,800 cars of lumber.

The steamers Loughrigg-Holme and Akaba have almost completed loading their cargoes of timber, deals, &c., in the Louise basin at Quebec, and will sail for Yarmouth and London respectively this week. Both these vessels are taking large quantities of deals from the Lake St. John road, which are being shipped by Messrs. Dobell, Beckett & Co.

All the mills in the Ottawa district are under full pressure, shipping out orders both by barge and rail for steamers loading at Montreal and other St. Lawrence shipping points, and both the railway companies and barge forwarders are taxed to their utmost in supplying the necessary cars and craft for this purpose. The rush is much greater than it has been for many years past.

Reports from New Brunswick are to the effect that most of the lumber drives on the Upper St. John river are in the corporation limits, among which are those of Kilburn & McIntosh, Dickie, Morrison & Cushing. John R. McConnell's drive on the Aroostook, containing 13,000,000 feet, is also out. On the smaller streams several drives are hung up. Neil McLean, operating for Miller & Woodman, has 2,500,000 feet hung up on Nigger Brook, W. H. Murray has 2,000,000 feet on Birch river, Chas. Jones 600,000 feet on Fox Brook, and Page & Malleat 500,000 on Fish river. Guy McCollum will probably leave one million and a half on the South West.

FOREIGN.

Large shipments of lumber are being made from Marinette and Menominee, Mich.

McBurney and McCaul, of Marquette, Mich., have sold their logs to Saginaw parties.

G. W. Ellis, of Bay City, Mich., has 3,000,000 feet of Canadian logs to store for future sawing, and expects 9,000,000 feet more from the Georgian Bay.

A cargo of 1,500,000 feet of pine lumber has arrived at Buffalo from Duluth, for the new firm of R. Laidlaw & Co. They are also receiving from Canada a quantity of 16-inch shingles.

Hardwoods are selling at Saginaw, Mich., as follows: Merchantable basswood, $14, firsts and seconds, $19; red oak, merchantable, $22, firsts and seconds, $30; black ash, $15 and $22.

Log run is held at Saginaw, Mich., at $13.50 upwards, and box at $8.50 to $9. The demand is said to be very limited. The movement of lumber by lake is comparatively light. The rate is $1.25 to Buffalo and Tonawanda and $1.12½ to Ohio ports.

The steamer Nellie Torrent and schooners Jackson and Antelope have arrived at Bay City, Mich., from Spanish River, Ont., with 1,413,957 feet of lumber for E. B. Foss & Co., which this firm has purchased from the Spanish River Lumber Company. The schooner Mary C. Perew brought over from the same concern 404,440 feet for Briscoe and Plumsteel Company.

The following is the result of an auction sale held on 13th May by Churchill & Sims, London, Eng.: Per steamer "Caldy," from Quebec—12 x 3 x 10, 3rd pine, £7 15s; 13/15 x 3 x 10, 3rd pine, £7 15s; 12 x 3 x 9, 3rd pine, £7 15s: 12 x 3 x 8, 3rd pine, £7 10s; 13 x 3 x 8, 3rd pine, £7 5s; 13 x 3 x 7, 3rd pine, £7. Per steamer "Daybreak," from Quebec—13 x 3 x 10, 3rd pine, £7 15s and £8; 13 x 3 x 9, 3rd pine, £7 15s; 12 x 3 x 8, 3rd pine, £7 5s; 12 x 3 x 7, 3rd pine, £7 5s. Per steamer "Olaf Kyrre," from Quebec—6/12 x 1½ x 11/18, 1st pine, £19; 6/13 x 1½ x 10, 1st pine, £17 5s; 6/13 x 1½ x 9, 1st pine, £16; 6/13 x 1½ x 4, 1st pine, £12 15s; 6/8 x 1¼ x 6/7, 1st pine, £11 15s; 12/16 x 1 9/13, 1st pine, £16 5s. Per steamer "Rosarian," from Quebec—12/13 x 3 x 10, 2nd pine, £12 10s; 12 x 3 x 9, 2nd pine, £11 15s; 13/14 x 3 x 9, 2nd pine, £11 10s; 12 x 3 x 8, 2nd pine, £10 10s; 13 x 3 x 8, 2nd pine, £10 10s; 9/11 x 3 x 8, 2nd pine, £9 15s.

## SHIPPING MATTERS.

The steamship Micmac gets 40s. on deals from Pictou, N.S., to w.c. England.

A number of schooners are getting $2.50 on lumber from St. John, N.B., to New York.

Deals are a little easier at Montreal, and charters are now being made at 37s. 6d. to 40s. to United Kingdom ports.

Freight rates from Duluth to Buffalo are now $1.62½. Many boats are offering, and it s probable rates will drop to $1.50.

The C. P. R. has issued a new tariff on shingles, sidings and lumber from British Columbia ports to Montreal and other eastern points. The new rate is 65 cts. per hundred pounds.

Lumber charters reported are: A steamer, 2,000 tons, Bastican to London, deals, 41s. 2d.; steamer, 1,079 tons, Halifax to Glasgow, deals, 40s.; steamer, 1,968 tons, St. John, N. B., to Manchester, deals, 39s.

The ship Annie E. Wright, which finished loading off Hopewell Cape last week, went ashore while beating down the bay. She listed, and lost the greater portion of her deckload. She was loaded with lumber by Nelson Smith.

The following vessels are reported to load at St. John, N.B., or neighboring ports: Steamer Gladestry, for w. c. England, deals, 40s.; Whitburn, Miramichi to w.c. England, 42s. 6d.; bark Sayre, for Londonderry, 43s. 9d.; str. Ardandhor, for w. c. England, deals, 39s.; Lisnacrieve, from Hopewell Cape for w. c. England, deals, 39s.; steamship Athon, for Liverpool, 41s.; Aldborough, for w.c. England, 37s. 6d.; bark Laudskrona, for Buenos Ayres, $8.

## BUSINESS NOTES.

We were apparently misinformed regarding the assignment of C. Peters, lumber dealer, Toronto, reported in our last issue. Mr. Peters states that such is not the case The error no doubt occurred by a confusion of names.

Mr. E. R. C. Clarkson has been appointed permanent liquidator for the Reid Lumber Co. of Toronto. A statement of the affairs of the company is now being prepared, which it is expected will show a surplus of about $20,000. A meeting of creditors will be held this week.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Arnprior to Montreal, $1.50 per M ft.; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. To New York for boat delivery, lots 50 M ft. and over, $2.50 per M ft., under 50 M feet $3.25 per M ft. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Boat delivery, lots 50 M ft. and over $3.00 per M ft., under 50 M ft. $3.75 per M ft Parry Sound, $4.00 per M feet; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Sprague, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c. From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Central Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods.

# WOOD PULP DEPARTMENT

## DUTY ON PULP WOOD.

THE Dominion government have not as yet taken any action towards imposing an export duty on pulp wood, and as the present session is drawing to a close, there does not appear to be much ground for hoping that such a step will be taken. Sir Charles Tupper recently read in the House the following communication : "The season for peeling the bark for pulp wood has now arrived. It lasts two months. The custom is to peel the wood now and ship it next winter. It is very important to know if the government, in case they impose an export duty on pulp wood, will allow that peeled this spring to be exported free of duty next winter. Unless the government will declare that they do not intend to impose an export duty, or if they do impose one they will allow the wood peeled this spring to go out free of duty, no one will attempt to contract for pulp wood, and in that case very little will be done." Sir Charles said: "In the absence of the Finance Minister, I do not expect a declaration from the government, but as the matter is one of great urgency, and it was intimated by Mr. Fielding that the government would state its policy at a later period of the session, I wish to point out the importance of that declaration being made as early as possible, also of the announcement being made whether wood peeled now will be allowed to be shipped next winter free of duty."

In reply, Sir Richard Cartwright has since stated that he was authorized to say that action would be taken to prevent parties who were now making contracts for pulp wood from suffering, whatever the course adopted by the government might be.

## THE ARCADIA PULP AND PAPER MILLS COMPANY.

A COPY of the prospectus of the Arcadia Pulp and Paper Mills Co., Ltd., which has been incorporated to take over the properties of the Milton Pulp Co. and the Morgan Falls Pulp Co., has been received. According to a report by Mr. I. P. Eastick, the Milton pulp mills are situated on the Liverpool river at Milton, N.S. They have developed a water power of about 3,000 to 4,000 h.p., but are at present only using 1,500 h.p. There are four grinders, and the average output of dry pulp has been 414 tons monthly. The average cost of wood is $2.83 per cord, and the actual cost of manufacturing the pulp is $8 per ton.

The Morgan Falls pulp mill is situated on the La Hare river, Lunenburg county, N.S., and has a water power of 1,100 h. p. There are three grinders, with an average output of 250 tons dry pulp per month.

The production of the mills has been sold in the United States at prices ranging from $16 to $18 duty paid, netting at shipping point $12.34 to $13.84 per ton. The new company propose to ship a large portion of the output to England.

The Maria Pulp and Timber Company, of Maria, Que., expect to commence operations early in June.

## NEW PULP SCREEN.

A NEW form of pulp screen has been devised by James Bishop, of Hull, Que., for which he has recently received an American patent. Figure 1 is a top view of the pulp screen, which is partly broken away to show the inclined divisions in the trough ; Fig. 2, a side elevation of the same ; and Fig. 3, a section on line X X, Fig. 1, the screen shown as entire.

The invention has for its object to prevent the meshes or perforations in a paper pulp screen from

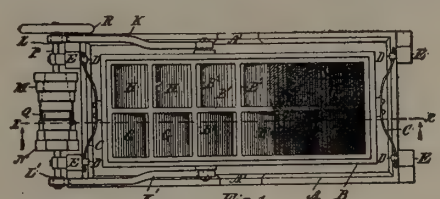

Fig. 1.

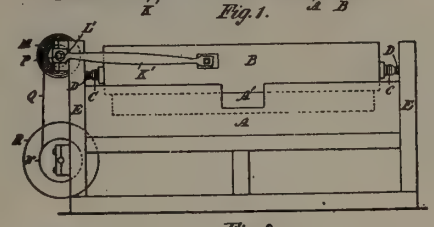

Fig. 2.

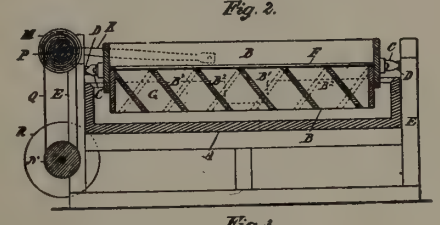

Fig. 3

becoming clogged with pulp by passage of air through one-half the meshes in alternate and opposite directions, and also to prevent the accumulation of "strings" of solidified pulp hanging from the bottom of the screen, which, dropping into the vat, do not amalgamate with the semi-fluid pulp, but cause irregularity and breaks in the paper when the pulp is made into paper. The invention consists of a bottomless trough divided by one or more vertical longitudinal partitions and inclined traverse partitions, the alternate rows of spaces formed by the divisions inclining in opposite directions, a screen within the trough and above the divisions, and means for reciprocally agitating the trough, so that when moving in one direction the correspondingly inclined series of divisions will force the air upward through the meshes, and the reversely inclined series of divisions will suck through the meshes above them, and when the trough moves in the opposite direction a vice versa air action through the screen meshes is produced.

According to the new Canadian tariff the duty on pulp making and paper making machinery is reduced from 27½ to 25 per cent.

Artificial silk, made mostly of wood pulp, is being sold in many New York dry goods stores. It is said by an expert in silks that the merchants selling artificial silks do not know that the fabrics in question are not the product of the silkworm. The same expert says that but for a lack of tensile strength when wet, the wood pulp fibre is in no way to be distinguished from natural silk, except perhaps by a slight superiority in lustre. Generally speaking, the cost of production of the wood pulp fabric is just one-third that of natural silk.

## PULP NOTES.

The American Paper Trade & Wood Pulp News states that the Sault Ste. Marie Pulp & Paper Company, of Sault Ste. Marie, Ont., contemplate the erection of a new chemical pulp mill.

The price paid for the Masterman pulp mill at Chatham, N. B., which was reported in our last issue to have been purchased by Mr. Albert E. Reid, of Maidstone, England, is given as $185,000.

Mr. P. J. Loughrin, who has been a strong advocate of the imposition by the Dominion government of an export duty on pulp wood, is said to have been deposed from his position of Canadian organizer for the American Federation of Labor.

Mr. Thos. Allison recently entered an action against the owners of the Masterman pulp mill at Chatham, N.B., to recover a stated sum for services in connection with the erection of the mill. A settlement is now said to have been made at $2,000.

The Sissiboo Falls Pulp Company, of Digby, N. S., made a shipment in one week of 40 car loads of wood pulp to the British market. This cargo is said to have been sold before it left the factory, and makes a total of 80 car loads shipped to Great Britain this year.

The Paper Trade Review, of London, England, is authority for the statement that during the past few weeks thousands of bales of American pulp have been received at London, Liverpool and Glasgow. Canadian pulp is held in high appreciation at various English mills where it has been given a trial, and at the present time several large orders are pending.

A decision has recently been handed down by an appellate court in northern New York to the effect that no stream is a public highway for log driving unless it is navigable in its natural state. This decision, it is said, will shut out many thousand acres of forest lands from their natural market as effectually as if there were no streams in the territory.

Ex-Senator Warner Miller, of New York, who is interested in the Laurentide Pulp Company, recently gave it as his opinion that a considerable boom would be experienced in the pulp and paper industries of Canada during the coming year. The direction which the expansion of the business would take would be in trade with Great Britain, where the product sold at a higher price than in the United States. Mr. Miller has purchased the right to the water power of the Shewanigan Falls, near Three Rivers, Que., where it is proposed to erect a pulp mill at an early date.

A meeting of the shareholders of the Laurentide Pulp Company, of Grand Mere, Que., was held in Montreal to ratify a by-law increasing the capital stock of the company to $900,000. It is understood the company propose erecting additional works at their mills at Grand Mere, on the St. Maurice river, where valuable timber limits have been acquired. A change has recently been made in the management of the company, the directors now being : President, Mr. R. B. Angus ; Vice-President, Sir W. C. Van Horne ; General Russell A. Alger, Secretary of War, Washington ; Mr. A. Pagenstecker and Mr. Warren Curtis, New York ; Mr. R. D. McGibbon, Q. C., Montreal, and Mr. John P. Riley, Secretary, Grand Mere, Que.

Saw mill owners in every part of Canada are asked to assist in making THE LUMBERMAN of greater interest to its readers by furnishing information regarding the condition of the lumber market. Particulars of sales of stock, estimated cut, current prices, etc., are solicited.

PULP MACHINERY

We are prepared to supply Pulp Grinders, Wet Machines and Baling Presses. . . .

WRITE FOR ESTIMATES.

Robb Engineering Co., Ltd., Amherst, N.S.

# THE NEWS.

—Geo. F. Beach is erecting a steam saw mill at Dumbarton, N. B.

—Castule & Juvenale, of Leterriere, Que., have erected a new saw mill.

—Dovey Bros., of Lindsay, Ont., are building a new shingle mill 70 x 30 feet.

—It is rumored that W. H. Murray, of St. John, will build a saw mill at Gibson, N. B.

—Forest fires are reported to have destroyed considerable timber in the state of Minnesota.

—Gilmour & Co.'s workmen have been removed from the Trenton mill to Canoe Lake.

—Genelle, Peter & Co., Nakusp, B. C., have amalgamated with the Vancouver Sash & Door Company.

—A saw and shingle mill will be operated at Liskeard, Nipissing district, by J. Wilson, recently of Lindsay.

—The Aberdeen mills at Fredericton, N. B., owned by Donald Fraser & Sons, are now lighted by 100 electric lights.

—Hon. J. B. Snowball has had his steam saw mill at Chatham, N. B., put in first-class order, at a cost of about $10,000.

—H. Elderkin & Co., of Port Greville, N. B., intend building a pole railway to convey their logs to the mill during the summer months.

—The British Columbia Mills, Timber & Trading Company have opened an agency at Winnipeg, Man., with Mr. T. T. Sisson as manager.

—An address was recently given by Sir Henri Joly de Lotbiniere before the Horticultural Society at Ottawa, on "Forestry and Tree Planting."

—Geo. Montgomery is building a mill at Dalhousie, N. B., equipped with rotary, four shingle machines, planer and matcher, and other machinery.

—Australia is said to be again suffering from drought. Within ninety miles of the coast all timber, with the exception of river gums, has entirely died out.

—The Pembroke Navigation Co., of which Hon. Peter White is president, has given a contract for a steel boat to the Polson Iron Works Company, of Toronto.

—The Barker Lumber Company, of Burford, Ont., have enlarged their buildings and added new machinery. They will manufacture woodenware, handles, etc.

—T. L. Buller, of Ridgetown, Ont., has been running his mills and lumber yards at that place for about three years. He is doing a large business in his lumber, sash and door and building trade, besides exporting considerable hardwood lumber to Germany.

—The Board of Trade of Yorkton, N. W. T., is endeavoring to have a new road opened up from Yorkton to the Dickinson timber limit, ninety-six miles north. A recent estimate of the timber on this limit places the amount available at 70,000,000 feet board measure.

—The Ontario government is said to have entered suit against Thomas Hale and John R. Booth, of Renfrew, James T. Hurst, of Detroit, Hiram Sebley, of Bay City, Mich., and Isaac Bearinger, of Rochester, to recover the sum of $16,661 and interest, which is claimed to be owing as timber dues.

—E. McCann & Sons, saw mill proprietors, Dorchester Station, Ont., report business prospects bright. They have now entered on their 25th year, and find the demands of their trade necessitate still further enlargements. They are dealing very largely this season in white basswood and soft elm.

—At a recent mass meeting at Oswego, N. Y., a resolution was adopted protesting against the proposed United States duty of $2 per thousand feet on lumber, and setting forth that such a duty would enforce excessive drafts upon and the speedy exhaustion of the white pine forests of that country.

—Mr. George Gooderham, of Toronto, has a farm near Hamilton, Ont., on which 40,000 black walnut trees have been set out. It will be 35 or 40 years before the timber will be ready for market, but as black walnut is worth nearly $200 per thousand feet, Mr. Gooderham considers it a profitable investment.

—Captain Yates, of Victoria, B. C., is urging upon the Minister of Trade and Commerce to grant a subsidy of $100,000 for a line of steamers between British Columbia and Central and South American ports. Should the subsidy be granted it will prove a benefit to the British Columbia lumber industry.

—A charter has been secured for the Restigouche & Western railway, a line projected to connect with the Baie des Chaleurs at Campbellton, N. B., and extend to St. Leonards on the St. John river, a distance of 110 miles. By the construction of this road an impetus will be given to the lumber and pulp wood industries of the vicinity.

—The Nova Scotia Lumber Company, whose mill at Sherbrooke, Que., was recently destroyed by fire, is composed of Dr. C. W. Hewson, W. W. Pipes, Clarence Purdy, John W. and Job. Seaman, of Baronsfield, N. S., and John Gillespie and G. K. Preston, of Shulee. The burned mill included a gang and rotary mill and box shook machine.

—Mr. Adam Beck, of London, Ont., believes the Canadian government should impose an export duty of $2 on logs in retaliation against the duty on lumber proposed by the United States. Mr. Beck does a large trade in this lumber with Detroit, and claims that if the Americans are allowed to take elm logs from the peninsula free, his business will be ruined.

—Messrs. A. McKillop & Sons, who have been in business at West Lorne, Ont., for about thirty years, report an active trade. The business has grown from a small saw mill to its present dimensions, which include saw mills, flour mills, a large building trade, besides an extensive trade throughout Ontario and large shipments to the United States in hardwood lumber.

—The Howry mill at Fenelon Falls, Ont., is being rebuilt by the Bank of Toronto, and will commence operations about the 1st of August. The equipment, which is being furnished by the Wm. Hamilton Mfg. Co., of Peterboro, will consist of two band saws, with necessary trimmers and edger, a lath machine, and probably three shingle machines. The capacity of the mill will be 150,000 feet per 24 hours.

—The Dyment-Baker Lumber Company have purchased the planing mill formerly occupied by J. G. Dodd & Son, at the corner of Wellington and Bathurst streets, London, and also the adjoining vacant property from the Richard estate, and have started a sash and door factory, box factory and lumber yard. The building has been thoroughly overhauled and painted, and machinery modernized, particularly that used in connection with box manufacturing. The firm is composed of Messrs. N. Dyment and Thos. Baker, of Barrie, and A. E. Dyment, M. P., of Thessalon. They report business very fair and are now employing thirty hands. Their lumber supply comes from the Dyment mills at Thessalon, Gore Bay, Gravenhurst, Severn Bridge and Barrie.

## CASUALTIES.

—J. King, of Sherbrooke, Que., while working on a boom, was drowned in the river.

—Leo. Doucette was drowned while employed on H. Morel's drive, near Klocks Mills, Ont.

—Two brothers named Chapman were drowned on Gilman's Black River drive in Quebec recently.

—John Wilkes, of Marmora, while on the Rathbun Company's drive, was drowned at Deer River Falls.

—While stream driving near Wolfville, N. S., David McCallum missed his footing and fell between the logs. His body was crushed and he died in three hours.

—A serious accident occurred in the Huntsville Lumber Company's mills at Huntsville, Ont., by which Robert Brady was instantly killed. He was engaged in hauling a shingle block to the saw when he slipped and fell directly under the saw, which severed his head from his body.

—At Bracebridge, Ont., on April 29th, Wm. Hale, foreman for the Muskoka Slide & Boom Company, whilst engaged at the South Falls with a gang of men trying to take up stop logs in the main chute so as to lower the water in the slide, was struck on the head by a pike pole, knocked off the pier into the chute and carried over the falls.

## LEGAL DECISIONS.

LEWIS VS. MALTBY.—E. C. Lewis, of Essex, Ont., entered into an agreement with Mr. Maltby, lumber merchant of Detroit and Bay City, to purchase for the latter in Canada two million feet of white oak plank, for which he was to receive a commission of $1 per M. Mr. Lewis then entered into a deal with Ed. Smith, of Ruscomb, for the purchase of 200,000 feet at $15 per M., log run, and Mr. Smith began cutting. An inspector was sent by Mr. Maltby, who would accept only the two best grades worth $22 per M., refusing the two cheaper grades worth $6 and $10 per M. Mr. Lewis had been advanced $140 on his commission in the form of a note signed by Mr. Clifford, manager for Mr. Maltby, but both Messrs. Maltby and Clifford repudiated the note and suit was entered. Judgment was given in Mr. Lewis' favor for full amount and costs.

CHAPLEAU VS. MATTON.—Justice MacMahon has given judgment in the case of Chapleau vs. Matton, an action arising from a dispute over a sale of timber limits. The action was tried at Ottawa at the winter assizes, his Lordship reserving judgment. The parties to the suit were connected in a timber limit deal, the purchase and sale of the north half of berth No. 1 in range 5, block A, on Lonely river, in the province of Quebec. The sale was made on the most advantageous terms, and the dispute arose over the division of the profits. The plaintiff claimed a share, but defendant denied his claim on the ground that he had not advanced any capital. The contention was made by the plaintiff that it was he who negotiated both the favorable purchase and sale of the limits, and that it had been agreed that he should receive a percentage of the profits. His Lordship Justice MacMahon gave judgment in favor of the plaintiff, allowing him $3,350 and costs.

Messrs. D. & J. Ritchie & Co., of Newcastle, N. B., are having their mills and yards fitted up with electric light. The dynamo and entire installation for about 200 lights is now being put in by John Starr, Son & Co., Ltd., the electrical engineers and contractors of Halifax, N. S., under the superintendence of Mr. George C. Siebert, one of their best experts.

## PERSONAL.

Mr. C. W. Hellems, a pioneer Canadian lumberman, died at St. Catharines, Ont., last month, at the age of 89 years.

Mr. J. W. Scatcherd, the well-known lumber dealer of Buffalo, was one of the judges at the recent horse show in Toronto.

The death is announced at Shawville, Que., of Mr. Patrick Maloney, who for a number of years was engaged in lumbering.

Mr. Robert Armstrong, who has been head sawyer in Dundas and Flavelle's saw mill at Lindsay, Ont., has accepted a similar position with Sadler & Co. at Biscotasing.

Mr. John White, ex-M.P. for Halton county, died at Milton, Ont., a fortnight ago. Deceased came to Canada in 1823, and carried on an extensive lumber business for many years.

Mr. Wm. Creswell, who for a number of years has been foreman for M. M. Boyd & Co., of Bobcaygeon, will be removed to British Columbia, where the firm own extensive timber limits. It is probable he may reside there permanently.

The news of the sad death of Mr. W. C. King, of the well-known firm of G. G. & W. C. King, lumber operators, Chipman, N. B., was learned with regret. Deceased was about 40 years of age, and was a brother of Senator King.

Mr. Henry W. Miller died at St. John, N. B., on the 15th ultimo. Deceased was born in 1826, and entered the lumber business when quite young, in which occupation he remained until within a year of the time of his death. His first interests were at Chamcook and Elsworth. About forty years ago he removed to St. John, where he formed a partnership with C. F. Woodman under the firm name of Miller & Woodman.

## PROTECTION FOR MAGNOLIA METAL.

THE Magnolia Metal Company, of New York, write us under date of May 11 as follows:

We desire to inform you that the firm of Sugden, Pound & Wagner, of London (former selling agents for Magnolia Metal in Europe, and who traded under the name of the Magnolia Anti-Friction Metal Co. of Great Britain by special permission of our company), have been dispossessed of their agency by the English courts, and that our London office and our foreign business are now under the management of Mr. Chas. B. Miller, the president of this company. We beg also to inform you that Sugden, Pound & Wagner were recently perpetually enjoined, together with the Atlas Metal Co., Limited, of London, John Sugden, Max Wagner, Arthur George Brown, the Globe Engineering Co., Ltd., of Manchester, the Atlas Bronze Co., Limited, and the Atlas Bronze Co., from continuing the fraudulent business of making an anti-friction metal and branding it with the trade mark of the Magnolia Metal Company, of New York, imitating their ingots, marking the boxes in which the metal is packed "Made in the United States," and otherwise deceiving and imposing upon purchasers of anti-friction metal in Great Britain and Europe. Justice Collins heard this case, and gave judgment against Sugden, Wagner, Brown, the Globe Engineering Co., Ltd., and others for selling counterfeit goods and deceiving the public by representing that the goods they sold were made in the United States by the Magnolia Metal Co.

An appeal was taken from the injunction above referred to. This appeal was tried before the Court of Appeals, Lord Esher presiding, and the perpetual injunction granted by Justice Collins was confirmed. It was in this trial that Lord Esher denounced the action of the parties above named, and characterized their performance as "a disgusting fraud."

It has come to our notice that parties in this country have attempted to perpetrate a similar fraud, and we now have one western firm in the courts over this matter, and we desire through your columns to warn the engineers and the general public, users of anti-friction metal, against these fraudulent attempts to pirate and appropriate the use of our trade marks and name of our metal.

Every bar of Magnolia Metal bears the steel stamp of the magnolia flower and the impression of the steel die "Patented June 3rd, 1890" and "Manufactured in the United States," with the exception of the metal manufactured by this company in Russia, which bears the stamp of the magnolia flower and the words "Manufactured in Russia."

The Greco-Turkish war, the Cuban insurrection, and the sealing question are the principal topics covered by the May Review of Reviews, in editorials, special articles, and magazine and book reviews, together with cartoon and other illustrations.

Mr. T. H. Hoskins, writing to Garden and Forest, takes the stand that there is to-day more and better standing timber in New England than ever before since lumbering was commenced. Many, he says, seem to fear that the forests are being robbed for the manufacture of wood pulp. Observations, however, will show that poplar trees of the best size for wood pulp can be grown in a very few years, six to ten, and I think it will not be long before the growing of such wood will become a regular and profitable business on our rocky mountain farms.

## IMPROVEMENTS FOR DRYING LUMBER.

MESSRS. W. C. Edwards and Company, of Rockland, and Mr. E. C. Whitney, of the St. Anthony Lumber Company, of Ottawa, are now having constructed at their works modern plants for the purpose of drying lumber under the well-known Emerson patent automatic compression moist air system. The same spirit which has been characteristic of Mr. Edwards and Mr. Whitney, for having everything the most complete, seems to have decidedly expressed itself when selecting the equipment for their drying plants, which possess many new and novel features.

The trucks for conveying the lumber through the dryer are of a new design, having a great capacity for their weight, each car having eight wheels, with hardened steel roller bearings. The frame of car being entirely of steel, it is not affected by the heat, and is so arranged as to give four supports to the lumber, keeping it straight through the process of drying.

The steam equipment is of the most substantial character, arranged for heating either by exhaust or live steam, and rests on an iron base, and is perfectly insulated from the building. The tracks through the dryer are secured to iron stands every 2 feet, which holds the track firm and in alignment, at the same time allowing for expansion, and doing away entirely with the wooden track supports,, which soon dry out and often cause disastrous fires. The kiln houses, owing to the moist air process, are always wet, entirely overcoming any liability of fire being started spontaneously. It is claimed that with this process of drying the strength of the lumber is not impaired or the lumber baked, and while the lumber is greatly reduced in weight in a remarkably short time, it produces no evil effects which are characteristic in general kiln drying, and the color of the lumber remains the same as newly air-dried stock.

The Reliance Dry Kiln Company, of Baltimore, Maryland, U.S.A., who are the manufacturers of this equipment for Messrs. Edwards and Whitney, would be pleased to give any information desired to manufacturers who are interested in lumber drying.

## SLABBING FOR THE GANG.

A MINNEAPOLIS sawyer, in an interview with a representative of the Mississippi Valley Lumberman, says: "In slabbing for the gang, there is a very important point which is not given sufficient attention. If you stand and watch a circular saw in operation, especially in sawing up cants, you will appreciate my remarks. Most all logs taper from one end to the other, and it is not always practicable to begin sawing from the butt. Tough knots and limbs are the rule rather than the exception. When the circular goes up against the uneven side of a log, it has a decided tendency to spring against the outside rim, and the pressure prevents it from coming back to a perpendicular position. I have seen circulars, when in operation, vary 1½ inches from the centre. While a band will deviate from its course fully as readily as a circular, its construction compels it to almost immediately swerve back in the other direction and resume its regular course. These facts have to be taken into consideration by the sawyer, and when he is operating a circular he is compelled to take off generous slabs, not only to ensure perfect lumber, but also to protect the saw. Where I am now engaged the orders are to get out every board that will measure four feet long and four inches wide, and by judicious slabbing much of this class of lumber is saved which would otherwise go into the refuse pile."

The Campbell Logging Co., New Westminster, B. C., is being incorporated, with a capital stock of $10,000.

### A SYLVAN ROMANCE.

WHEN first he cedar she was so spruce and cherry that he began to (sigh) cypress his heart and pine for her.

He said: "I want to ash yew a question."

"You'd butternut," she replied.

He rose and took her palm in his.

"Oak-um!" he said. "Do not make me a weeping Will, O! Let us orange to be a-hem! locked together.

Suddenly he 'elder in his arms.

Only one thoroughly bass wood peach on any pear, tho' these are so pop(u)lar yew pine for news.

I can only say they have been olive for each other ever since that date.—Louis Campbell Barter, in Saturday Night.

### AN APPLE TREE'S FREAK.

AN exchange says: A certain Road Island greening apple tree, in an orchard near Lake Erie, last year produced ordinary fruit on the northeast side, while that on the southwest half was of a mixed character, each apple being partly a greening and partly a Talman sweet. The two varieties appeared in sections for the most part corresponding with the carpels.

In some examples three sections, or three-fifths of the apple, were greening, and two-fifths Talman sweet, while in others the proportions were reversed. In others one-fifth was greening and in others the proportion was smaller yet. The different parts were in most cases easily distinguished by the color and by the greater protuberance of the greening, as forming a part of a larger apple, and the flavors of the different parts was as distinctly those of different apples as if they had grown on separate trees. The line of separation, though not very definite, in most cases corresponded with divisions between the carpels, and ran to the summit of the apple, except that a small part around the summit seemed in every case to be greening.

## BRITISH COLUMBIA LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

TIMBER manufacturers generally view the outlook for a good season's business very hopefully, and if the shipments to foreign countries for the first four months can be taken as any criterion, they are not likely to be disappointed. In that period nearly forty vessels sailed for foreign ports loaded with lumber, six going to Delagoa Bay, South Africa, eight to the United Kingdom, and six to Australia. Several others are now loading at the different ports.

Much interest has been taken by the lumber trade in the legislation which has been obtained to provide for the grading of lumber. The bill was introduced in the House by Mr. R. P. Rithet, who is largely interested in the Chemainus mill, and passed with little opposition. The chief provisions are as follows :

Whereas it is desirable to provide some definite mode of ascertaining the grades of lumber exported to foreign markets and determining upon the qualifications and fitness of persons to act as surveyors of lumber : Therefore, Her Majesty, by and with the advice and consent of the Legislative Assembly of the province of British Columbia, enacts as follows :—

1. This Act may be cited as the "Lumber Inspection Act, 1897."

2. The Lieutenant-Governor in Council may appoint a board of lumber commissioners, to consist of not more than four persons, for the purpose of carrying out the provisions of this Act.

5. Any person desiring to obtain a certificate of competency as a surveyor of lumber shall file an application with the secretary, setting out his name, age, place of residence and qualification for appointment, and shall also with such application lodge with the secretary the sum of five dollars.

8. The board may (subject to the approval of the appointee by the Lieutenant-Governor in Council) appoint a fit person, well skilled and practically acquainted with the export lumber trade of the province, to be inspector of lumber surveyors, who shall supervise and control the surveyors.

14. Surveyors shall be remunerated by the persons who may employ their services, but should an inspector be appointed as provided in this Act, the board shall have power to levy dues on all lumber exported by sea from the province of British Columbia, for the purpose of creating a fund to be used in paying the said inspector's salary and the other expenses. Such dues, however, shall not in any case exceed two and one-half cents per thousand feet board measure, and the amount of dues payable in respect of any lumber shall be collected by the surveyor and remitted to the secretary of the board.

The new drying kiln at the Royal City Mills having been completed, the company is now building a fine large addition to the mill. In this wing will be sawn the lumber to be used in making salmon boxes. This part of the business is assuming large proportions, and this year, with an expected increased salmon pack, there will be an extra large number of cases required by the canneries.

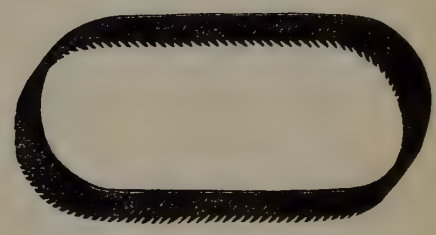
WHY BAND SAWS BREAK

SIXTEEN REASONS, AND HOW TO AVOID THEM



Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking; analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner of properly setting irregular teeth is described. In connection with the treatise is a history of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, ONE DOLLAR.

Address— CANADA LUMBERMAN, Toronto Ont.

CHATHAM, ONT., June 19th, 1896.

JAS. S. PARMENTER, Flushing, N. Y.

DEAR SIR: We take very great pleasure in being able to say from nearly one year's use of your Patent Dry Kiln, we find it away ahead of anything we ever yet tried for thoroughly drying lumber without injuring it in the least. So far we have found exhaust steam alone sufficient for our purpose, so that it absolutely costs us nothing to run it. We thoroughly dry white oak, rock elm, balm and other hardwood lumber in less time than we ever did with a blast kiln, and especially find it a splendid kiln for drying white oak hubs It does its work so naturally that neither hubs nor lumber are injured by it.

## St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

## Simonds' Process

in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

---

CAMPBELLTON, N. B., Nov. 17th, 1894.

R. H. SMITH CO., Ltd., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

---

CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., Ltd., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62″ SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W. G. S.

## THE DUTY ON HARDWOODS.

MR. J. McGregor, of Owen Sound, Ont., writes to the Toronto Globe as follows on the subject of a duty on hardwood lumber :

Some dissatisfaction is being expressed by the lumbermen throughout the Georgian Bay district at the government because they have failed to make any provision for an export duty on saw logs in the event of the Dingley bill, now before the American Senate, becoming law in its present form, as far as it is applicable to Canadian lumber. But the lumbermen have shown a want of unanimity of opinion among themselves on this subject, as instanced by one body who waited upon the government a few weeks ago, asking for an export duty on logs in case the Americans should impose an import duty of more than one dollar per thousand feet on manufactured lumber, whilst another body who met a few days ago repudiated the views of the former and disowned their willingness to submit to a duty of over one dollar on lumbe and asked the government to meet any such import duty by an export duty of a similar amount on saw logs and pulp-wood.

Our government have no doubt acted wisely in deciding to hold out no threat of retaliation in this matter, while the bill is yet before the American Senate, and where it is likely to be considerably modified before it finally becomes law. That body is well aware of the temper of the Canadian people in this matter. A large number of saw mill owners, operating in Michigan, and who depend upon Canadian logs to supply their mills—together with other Americans who are operating on this side of the line—are, or have been, in Washington for some time, fighting against the imposition of more than one dollar on Canadian pine lumber ; and while there is yet a strong probability of the duty being placed at the latter figure, and a possibility, however remote, of its being entirely abolished, our government have, I think, acted wisely in waiting the issue of events. It is altogether likely that the Canadian parliament will still be in session when the Dingley bill finally becomes law, and there will then be opportunity to act upon it.

I understand that in the Dingley bill, as passed by Congress, hardwoods are taxed equally with pine at $2 per thousand feet, and as no one has been saying a word for the poor hardwood men, it is likely to be left at that figure, no matter what is done with pine. Now, this will be a great hardship on hundreds of small saw mill men throughout the Dominion, but principally in western Ontario, who operate almost exclusively in hardwoods, the pine having long since disappeared from their lands. They purchase their logs chiefly from the surrounding farmers, who cut and haul them in the winter season when other work is scarce, and it is a considerable source of revenue to them. These saw mill men, like the pine men, depend largely upon the American market to dispose of their products, and if the two dollar clause goes into effect, it will almost entirely shut them out of that market, for a time at least, until the return of better times may have the effect of stimulating the demand and raising the price.

It is to be hoped, if any hint has been, or is likely to be given by our government to the authorities at Washington as to its probable action in the matter of an export duty on logs in case the lumber duties are not modified, that the interests of the hardwood men will receive equal consideration with those of the larger and wealthier pine men.

## MR. D. H. GILLIES.

WE have pleasure in presenting to our readers the accompanying portrait and particulars of Mr. D. H. Gillies, manager of the firm of S. Gillies

MR. D. H. GILLIES.

& Son, lumber dealers and saw mill proprietors, of London, Ont.

Mr. Gillies was born near Buckinham, on the Ottawa river, on May 21st, 1861. When about 12 years of age his father moved to western Ontario, starting a lumber business at Ailsa Craig. After leaving school the subject of our sketch entered into partnership with his father and brother in the Ailsa Craig mills, and two years ago, wishing to still further enlarge their already prosperous business, they purchased the London mill, which Mr. D. H. Gillies is now running. The volume of business of the first year, coupled with present prospects for a large trade in 1897, indicate his good judgment in the venture.

Mr. Gillies confines his operations at London mostly to hardwoods, sawing the greater part of his lumber from logs brought in from all parts of the country, and shipping the products of his mill to different points in Ontario, Quebec and the United States. He has already acquired an enviable reputation for the quality of his output, and always obtains the highest prices ruling.

Owing to the first-class education in the business obtained under the direction of his father, Mr. S. Gillies, of Ailsa Craig (who is well known as one of the best experts in the timber line), Mr. Gillies is enabled to give a practical supervision to the minute details which always ensure success to any line of business. To meet the demands of his trade he has been obliged to put in a larger engine, of Leonard make, which together with a new Waterous carrier, has just been put in operation. He is also a clever machinist, as evidenced by the labor-saving and work-facilitating devices of his own construction in his mill, which has a capacity of 50,000 feet per day. As an expert judge of timber and lumber he enjoys a wide reputation. The yard at the mill is well stocked with logs, and orders are already booked to cover almost the entire season's output. Eighteen hands are employed at London. Besides the mills at Ailsa Craig, which employ about 50 men, the firm have a large mill at Davidson, Michigan, managed by Mr. John Gillies.

Mr. D. H. Gillies has recently purchased the London Show Case Works.

## FORESTRY TREATMENT.

A DETAILED report on forestry made by the Committee of the National Academy of Science has been laid before the United States Senate. The report goes into details as to the European experiments regarding the influence of forests upon climate and spring flow, and says that figures demonstrate a considerable progressive reduction in the mean annual, and lowest water levels upon all the chief rivers draining central Europe. Millions of dollars have been expended in recent years in Europe in checking the force of floods, due to denuded mountain slopes, by the construction of dams and river-beds, and the committee predicts similar expenditures on this continent to maintain the narrow valleys of the west habitable.

The report also condemns the government's action in permitting free pasturage on the reserved lands, not only because of the damage thereby done to them, but because of the fact that one class only is deriving benefit therefrom. In order to be just to all sections, land more valuable for its mineral deposits or agricultural crops than its timber should be taken from the reservations and sold to miners or farmers.

On these lines a general scheme for the administration of reserved lands by the government has been submitted.

---

The most scientific forester in Europe says the oldest trees in Northern Europe are the pines of Norway and Sweden, and that these are not known to live more than 570 years. Germany's oldest oaks live only a little more than 300 years.

## OCEAN LOG RAFTING.

IN commenting on the proposition to extend the enterprise of rafting logs from Columbia river and Puget Sound to San Francisco, an old sea captain, who has been engaged in carrying lumber down the coast for years, lately said at Tacoma that there was nothing dangerous to the vessel interest in the proposed innovation, says the Northwestern Lumberman. He said they could build cigar-shaped rafts, and then build some more, but that would not feaze the carrying trade by vessels. His idea is that there are too many fathoms of chain, too many thousands of pounds of iron, too many days' labor, which go into the construction of such rafts, to make the venture profitable. This sea captain says that it is not the profits on landing logs in San Francisco that the promoters of the cigar-shaped floats are looking for, but it is a scheme to get mill operators to pay a royalty of $15,000 each for the privilege of using the cradle and chain-securing devices, which are patented. This oracle from the seas says that it is not log rafts which are to revolutionize the lumber-carrying business of the Pacific coast, and to relegate the wind-jamming drovers to the bone-yard. It is barges that are going to do the business, in his view, and the day of their introduction is not far distant. If the wind comes fair the towing steamer has but little strain in bringing her tow along. If the wind comes foul, she tows as long as any headway is to be made. With a nasty gale and heavy sea, the tug gets her tow well off shore, signals the barges to slip their lines and make sufficient sail with which to lie to. Then the steamer drops them, lies near until the gale subsides, and with an easy run again picks up her string of barges, and continues down the coast.

## BAND VS. CIRCULAR SAW.

THE following table, showing the saving in lumber effected by the use of a band saw in comparison with a circular saw, is compiled by Mr. R. A. Johnston, of Bay City, Mich., and furnished to THE LUMBERMAN for publication. The band saw scale is figured on light ⅛ inch, and the rotary scale on light ¼ inch.

## TABLE SHOWING SAVING IN LUMBER EFFECTED BY BAND MILL OVER CIRCULAR MILL.

### CIRCULAR SAW SCALE.

| Diameter of Log. | Length of Log. | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | 12 Feet. | 14 Feet. | 16 Feet. | 18 Feet. | 20 Feet. | 22 Feet. | 24 Feet. | 26 Feet. | 28 Feet. |

## CROWN TIMBER AGENTS AND FOREST RANGERS.

In connection with the biographies of crown timber agents which appeared in our June issue, we print herewith portraits and some particulars of Messrs. S. M. Johnson and Wm. Russell, who in addition to acting as timber agents in their respective localities, also superintend the forest ranging.

### MR. STURGIS M. JOHNSON.

Stationed at Arnprior, in the county of Renfrew, Mr. Johnson has charge of the section of country which forms the centre and lower Ottawa wood ranging districts. He was born in the town of L'Orignal, county of Prescott, in 1839, was for a number of years deputy registrar for that county, and during that time held several municipal offices, such as auditor for the counties of Prescott and Russell, and municipal clerk, holding the latter office for nine years.

In the fall of 1871 Mr. Johnson was appointed a forest ranger for the Ontario government, under Mr. Wm. Russell, of Pembroke, remaining there two years, when he was moved to the Mississippi district and placed in charge of part of that district. In 1878 he was appointed a superintendent of forest rangers in the districts now under his supervision, which stretches over a large section of country, beginning at the south shore of the Ottawa river at the northern boundary of the township of Horton, continuing in a westerly direction, taking in all the section of country drained by the Bonnechere river, continuing in a north-westerly course to the north-west corner of the township of Osler, which borders on the Parry Sound district, and taking in all the country drained by the Petawawa river on the south side; thence in a southerly and easterly direction to the Ottawa river, also embracing all the country drained by the Madawaska and Mississippi rivers.

When Mr. Johnson first entered that section of country, the standing green pine covered, he says, a very large part of the section described, and, were it not for fires, there would now be pine to supply all demands for the next fifty years. The Ottawa, Arnprior and Parry Sound Railway, running up the Madawaska country, has opened up a demand for all other kinds of woods, which are being bought up by speculators and shipped to Montreal and Quebec for exportation. He has two very efficient assistants, Messrs. John Brady, of Renfrew, and James Halliday, of Springtown, who do a large share of the ranging, and report to him each lumber camp's output, making a visit to each camp two and often three times during the season.

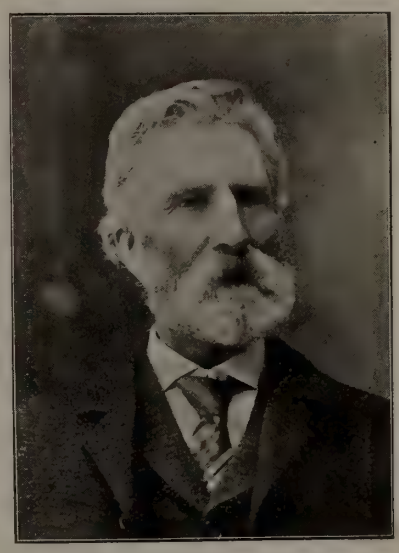
Mr. Sturgis M. Johnson.

A large percentage of the logs cut are scaled and their measurements tested with the operators cullers' measurements, which are taken from the latter's books and returned to Mr. Johnson's office, and by him entered, averaged and compared, and the whole, with full information, reported by him each month to the Department of Crown Lands at Toronto. At the close of the season full returns, such as cullers' measurements, affidavits of cullers, foremen and jobbers, as well as those of owners of located lots, are taken, and the whole compared with the winter returns, when a general statement is rendered under oath by each license holder or his manager and sent to the Department at Toronto. The area over which Mr. Johnson's district covers amounts to about 10,000 square miles.

Mr. Johnson holds three commissions as an officer in the volunteer service, and was out as lieutenant in No. 3 company, 18th batallion, Hawkesbury Infantry, in the Fenian Raid of 1866.

### MR. WILLIAM RUSSELL.

Mr. Russell was born in Fifeshire, Scotland, in the year 1824, his earliest recollection taking him back to the east mains of Balcaras, adjoining the west mains on which was the castle where dwelt Lord Lindsay, by whom Mr. Russell's father was employed as land agent. Being educated at the parish school and Madras College, he entered the dry-goods business in Dundee, remaining there about three years, then spent nine months in Dublin, at which time he resolved to see Canada and embarked in a sailing vessel for Quebec, arriving there in May, 1840, after a rough passage of 66 days. While in Quebec he met a prominent lumberman of those days, one Archibald Wilson. In relating his experiences since that time, Mr. Russell says:



Mr. William Russell.

"I engaged with him and went to Richmond and took charge of his store until the autumn of 1841, when I started for his lumbering operations on the Madawaska river, there being four of us, with a few cattle that we were taking up for the shanties. In those days we used oxen for laying up timber. We had a guide with us and no provisions except for dinner the first day. The canoe with provisions and our blankets was to meet us at certain points each night along the river, but unfortunately our guide lost his reckoning, and the consequence was we were three days and two nights out with nothing to eat and no blankets, and to crown all, our spunk got wet with wading creeks, and four inches of snow having fallen on us, we could make no fires. I remained five years with Mr. Wilson, taking a hand at everything, as all clerks had to do then. I then went with Mr. James Skead as book-keeper at his works, repairing and altering slides and dams on the Madawaska. An incident may be here mentioned of having foolishly run the High Falls slide on a stick of timber in company with the foreman, who was severely bruised. However, I came off safely. I then took out a raft of square timber for Arthur McArthur, drawing it from near the Clyde to Kalabogie Lake, the timber averaging 90 feet, for which he got six pence per foot and cleared some money. I then thought I would try the Ottawa river, and engaged with Alexander Powel, who lumbered at Deux Riviere. The succeeding year he sold out to John and David Bell, with whom I remained for six or seven years, dealing altogether in square timber. They made money at Deux Riviere, but went into purchasing job lots down in this quarter and got behind. I have lumbered both for myself and C. O'Kelly on Indian river since then in square timber."

"Two years were then spent in the mercantile business, after which I took an agency on the Coulonge river for Osborne, where we had three shanties in logs and two in square timber. In the spring of 1868 I was engaged by Thos. H. Johnson to inaugurate a system of fire ranging, being well acquainted with lumbering. I have been in the employment of the Ontario government ever since, was the first one ever engaged in the business, and I believe now the oldest holding the same position. For the first few years we took note only of operations in the settled townships, but finally took note of all cutting, which we report to the Department in Toronto. It was found, however, in this district, that it would facilitate matters to report the square timber to the Ottawa Agency direct, this being the only communication we have with that office."

Mr. Russell's district commences with the township of Ross, and from there extends up the Ottawa river, including all on Petewawa river excepting the townships adjacent to the head waters of the Bonnechere, and more accessible from there, and extending up the Ottawa river as far as any lumbering may be carried on in Ontario. It also embraces the Mattawa river and its tributaries. The timber in the district is somewhat similar to other districts, but chiefly pine for merchantable purposes, and in a great many places large quantities of spruce, well suited for sawn lumber. Mr. Russell states that the hardships he had to endure when first he went lumbering are now unknown on the Ottawa river; the camps or shanties are now made habitable, and in mostly all lumbering camps a well-served meal is given, whereas in former years all we could count on was pork and bread with pea soup—no tea unless you purchased it at one dollar a pound. All fared alike in that respect; in fact, none but the toughest of constitutions survived.

## MAKING MAPLE SUGAR.

Mr. Newlin Williams tells in the Forester how a fortune was once made in maple sugar. He concludes that a fortune awaits the man who shall discover this lost process of clarifying and moulding it so as to be popular. Thus he writes: "Some members of the New Jersey Forestry Association may have seen a man who, twenty years or more past, travelled on the Delaware Valley lines of the Pennsylvania Railroad, bent on selling maple sugar. His article was so much in demand that he made a comfortable fortune in selling it. Where he got the crude sugar is not known, but by some process, either borrowed from New England or original with himself, he clarified it, moulded it, and sold in pairs of oblong cakes done np in colored papers into attractive packages. Old folks and children alike confessed they knew no such delicious morsel. The sugar was dark-colored, hard, dry, brittle and free from grit, of fine strong flavor, and as clear as the red and yellow can is so popular to-day with the children at the holidays. The secret seems to have perished with the man, for none have seen so choice a product before or since.

The Oswego Lumbermen's Exchange have adopted the following resolution: "Whereas, the Canadian government has sent commissioners to Washington for the purpose of effecting closer trade relations with this country, and has given evidence of an intent to be very liberal in the matter; therefore, be it resolved, that now is the opportune time to secure a free Welland canal for American bottoms and American merchandise; that this should be accomplished in the interests of the great grain-growing sections of our country, and the immense carrying trade of the lakes, as it will furnish immediate relief in getting our grain to market, and in the rate of freight upon this grain, as well as upon coal and other commodities carried to the west for consumption; further, resolved, that we respectfully request our representative, the Hon. Charles A. Chickering, to make every effort to secure such action as will obtain a free Welland canal.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

C. H. MORTIMER
PUBLISHER
CONFEDERATION LIFE BUILDING, TORONTO
BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the tr[illegible] Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## APPOINTMENT OF A FORESTRY COMMISSION.

THE Ontario government has set a laudable example to the other provinces of the Dominion by its recent appointment of a Forestry Commission. This commission is composed of Messrs. Thomas Southworth, Clerk of Forestry, who is acting secretary; E. W. Rathbun, of Deseronto; John Bertram, of the Collins Inlet Lumber Co., of Toronto; Alexander Kirkwood, Chief Clerk of the Lands Branch, Crown Lands Department; and J. B. McWilliams, crown timber agent, of Peterboro'. Each of these gentlemen has devoted considerable time and attention to a study of the forestry problem in its many aspects, and it would be a difficult matter to select a commission of five persons from whom a more thorough and beneficial consideration of the subject might be expected.

The duties of the commission are of a widespread character. They include an investigation of the condition of the cleared or partially cleared lands of the province for the purpose of inaugurating plans for the perpetuation of the timber crop, in connection with which suitable reserves to be withdrawn from settlement for the purpose of reforestation will be reported upon, and means devised for protecting these reserves, as well as the present forests, from destruction by fire and other causes. The chief work will probably be found to be in the Lake Superior and Temiscamingue districts, which will probably be visited by the entire commission, but until the inaugural meeting is held, which is expected to be early in July, nothing definite is known regarding the course to be pursued.

This action on the part of the Ontario government is almost a direct outcome of the establishment of a Forestry Department. Not many years ago the opinion was quite general that pine forests, when cut down, gave growth to a crop of less valuable trees, such as poplar, birch, jack pine, etc. So universal was this belief that no one thought of disputing the claim. But investigations made within the past two years by the present Clerk of Forestry have proven that under ordinarily favorable conditions a re-growth of white pine will follow. Recent investigations by other students of forestry also confirm this view. Consequently the government have acted wisely in taking steps to perpetuate our forest wealth, and hand down to posterity a valuable asset.

The commission will present its report at the next session of the legislature, at which time its duties will have been fulfilled. We have no doubt, however, that the government will authorize the continuation of the work for a longer period.

## IMPORT AND EXPORT DUTIES.

BY a majority of eighteen the United States Senate have adopted the wood schedule practically as reported by the Finance Committee, the most important item of which is the placing of a duty of $2 per thousand feet on all imported rough lumber except whitewood, sycamore and basswood. Several senators strongly opposed the duty, and Mr. Vest moved an amendment excepting white pine from the operation of the law. This, however, was defeated, and it now seems probable that the bill will finally become law, and be signed by the president early in August.

This action on the part of the United States has naturally aroused a strong sentiment in Canada in favor of protecting our own industries, and not allowing our forests to be depleted for the building up of foreign countries. The proviso in the bill imposing an additional tax on lumber in case any country should place an export duty on saw-logs is regarded as an unqualified display of selfishness, and the opinion is freely expressed that the Dominion government should impose an export duty regardless of the immediate consequences. This would no doubt bring the United States government to a partial realization at least that there are mutual advantages to be gained by fair treatment, inasmuch as that country is to some extent dependent upon Canada for a supply of pulp wood, while Michigan lumbermen who obtain their raw material from the Georgian Bay district would be compelled to close their mills, to the ruination of many cities and towns.

Acting upon representations made by lumbermen and others, the Dominion government has given power to the Governor-General to impose this export tax whenever the Cabinet shall so decide. Sir Wilfrid Laurier, in a recent speech in London, England, stated that we were anxious to maintain friendly relations with the United States, but as that country had shown no desire to meet Canada on reasonable terms, we would be obliged to find markets elsewhere. From this it would appear that the Canadian government had decided to retaliate against the lumber duty by an export duty on saw-logs and pulpwood. Before taking this step, however, it would be well to study carefully the effects of such a duty upon the country.

Many hardwood dealers and manufacturers are opposed to the export duty. They claim that the United States consumer will pay the import duty of $2 per thousand feet, but when the amount of the export duty is added thereto, they will be compelled to abandon the United States market. In this connection a letter is published in another column setting forth some of the difficulties of entering the foreign markets. Any action which would seriously cripple the hardwood industry would prove disastrous to the country at large, notwithstanding that, judging from the arguments put forth by deputations at Ottawa and by the writers in the daily press, it would appear that pine was the only lumber made in Canada. There is manufactured in Ontario in one year many million feet of hardwood lumber. This is not made, like pine lumber, in mammoth mills, where the cost of manufacture is reduced to the minimum by labor-saving machinery, but in smaller mills, at a larger cost per thousand feet, thus distributing a large amount of money in new sections of country. These mills are in many cases the nucleus of the village which in course of time grows up around them, and should therefore be given every encouragement. The owners of these claim that they should not be called upon to pay for the protection of a few limit-holders on the Georgian Bay.

An export tax on saw-logs would no doubt limit the exportation of the same, as would also be the case with pulp-wood. Until new markets were found sufficient to consume our production of lumber, the price thereof would certainly depreciate, and likewise the price of timber limits. The former would prove a hardship to the small manufacturer with limited capital.

Were the Americans holding limits on the Georgian Bay to remove their mills to Canada, their output would come in direct competition with that of Canadian manufacturers, both in the local and foreign markets, as the United States market would practically be out of the question. Thus competitors would be brought into the field, resulting in low prices.

These and other disadvantages should be weighed before any definite action is taken. Looking at the other side of the question, it seems to be manifestly unjust that our logs should be taken out of the country free of duty and manufactured into lumber for the American market, while lumber manufactured on this side of the line cannot be placed on the same market except by the payment of a $2 duty.

Before leaving this subject, we must refer to the injustice of permitting lumber to be imported into this country free of duty. This is a point which has been overlooked by both legislators and lumbermen, the opinion evidently prevailing that no lumber is imported into Canada from the United States. This is far from being the case. Owing to the large scope of the United States

markets, and the attention given to grading the stock, the low grades of Michigan and Minnesota lumber have been distributed throughout western Ontario at ruinously low prices within the past five years, while southern pine, produced by cheap negro labor, is being laid down in Toronto below the actual cost of producing white pine. The effect of this is not only to replace the Canadian product, but to lower the price as well. A dealer is reported to have purchased several million feet of pine in Michigan at a much lower figure than the stock could be purchased for in Ontario. Now that the United States government have taken the initiative, it is the duty of our government to protect as far as expedient the lumbermen of Canada, and the imposition of an import duty will be welcomed as one of the first steps in this direction.

## EDITORIAL NOTES.

The appointment of Messrs. E. E. Sheppard and George Anderson as commissioners of trade to South America and Japan respectively, should result in increasing our export trade to these countries. A steamship company, with headquarters at Victoria, has made application to the Dominion government for a bonus towards establishing a direct steamship service from Victoria to South American ports, and upon Mr. Sheppard's report will depend the action of the government in this direction. It is therefore very desirable that an early report on the possibilities of trade should be made, as Canadian lumbermen are looking with increased interest to foreign markets.

The British Columbia Commercial Journal makes a strong plea for the protection of the forests of that province. It is shown that only twenty years ago the eastern slopes of the Sierra Nevadas were covered with trees, but to-day it is a serious proposition with the states of California and Nevada as to how to replenish the forests. The lumberman, the hunter and the recent floods account largely for the destruction of the timber. In British Columbia similar experiences are likely to be met with, unless precautions are at once taken. The Journal says: "The government, we think, ought to adopt some measure to secure the renewal of our forests, which in many parts is the only purpose to which immense tracts of land can be devoted. We want no mere playing at forest planting, but some extensive, properly organized and well systematized plan of forest renewal."

The Deep Waterways Commission appointed by the United States government to make a preliminary examination regarding a deep waterway from the Atlantic seaboard to the great lakes has presented its report. The scheme is believed by the commission to be quite feasible, although no approximate estimate of the cost is given. Starting from the head of lakes Michigan and Huron, the most eligible route is thought to be through the great lakes and their intermediate channels and the proposed Niagara ship canal to Lake Ontario, thence by way of the St. Lawrence river to the ocean. The surveys for the work alone will cost a large sum of money and occupy several years, while the immensity of the undertaking makes its carrying out extremely doubtful. However, it is certainly a work of great international importance, and if brought to a final completion no industry would receive more benefit than the lumber trade.

In the year 1900 a world's exhibition is to be held at Paris, France, which promises to eclipse anything yet inaugurated. It is not too early to make preparations for an exhibit of Canadian products, as only by making an early start can a creditable display be accomplished. The matter should therefore receive the immediate attention of the Dominion and provincial governments. An interesting feature of the exhibit would be a collection of Canadian forest products, for which purpose the provincial governments should each make an appropriation, this to be supplemented by a general grant from the Dominion. Our proposition would be to exhibit a specimen of every class of wood grown in Canada, in its raw state as well as in manufactured goods. A building might be erected entirely from our woods and finished in first-class style. This would, we believe, prove an effective and comparatively cheap method of advertising our products, while opportunity would also be afforded to make a comparison of our products with those of other countries.

## AN INTERESTING EXPERIMENT.

A trial was made some little time back at Messrs. Menzel & Co.'s paper and pulp manufactory at Elsenthal, in order to ascertain what was the shortest space of time in which it was possible to convert the wood of a standing tree into paper, and the latter into a journal for delivery. Three trees were felled in a forest near the establishment at 35 minutes past 7, in the presence of two of the owners of the manufactory and a notary whom they had called upon to certify as to the authenticity of the experiment. The trees were carried to the manufactory, where they were cut into pieces 12 inches long, which were then decorticated and split. The wood was then raised by an elevator to the five defibrators of the works. The wood-pulp produced by these was then put into a vat, where it was mixed with the necessary materials. This process over, the pulp was sent to the paper machine, and 34 minutes past nine in the morning, the first sheet of paper was finished. The whole manufacture had thus taken but 1 hour and 59 minutes. The owners of the factory, accompanied by the notary, then took a few sheets to a printing office at a distance of two and a half miles from the works. At 10 o'clock a copy of the printed journal was in the hands of the party, so that it had taken two hours and 25 minutes to convert the wood of a standing tree into a printed journal ready for delivery. There occurred a few interruptions which might be avoided at another time, and in the opinion of the manufacturers, had it not been for this, quite 20 minutes would have been gained.

Hugh Pearson is suing the Collins Inlet Lumber Co. for $3,000 for personal injuries and alleged arrears of wages. He claims to have fallen twelve feet through a defective tramway, and to have injured his ankle. The company denies liability, and charges contributory negligence. The matter got into the High Court, whence it was referred to Judge McDougall for arbitration, and he is now dealing with the matter.

## PERSONAL.

Mr. S. R. Purvis, mill manager for the Parry Sound Lumber Co., died last month, at the age of 55 years.

Mr. Robert Walsh, surveyor in W. C. Edwards & Co.'s mills at New Edinburgh, died last month from consumption. He was 49 years of age and highly respected.

The Reformers of East Victoria, Ont., have nominated as their candidate for the Ontario election Mr. John Austin, of Fenelon Falls, who is also a member of the lumbering firm of Craig & Austin, of Kinmount.

Mr. Wm. Creswell, for many years foreman for M. M. Boyd & Co., of Bobcaygeon, Ont., left last month for Cowitchan, Vancouver Island, B. C., where the Boyd Company have a large saw mill and extensive timber limits. It is proposed to operate the mill this summer.

Prior to his recent marriage, Mr. J. G. Buchanan, accountant for the Shephard & Morse Lumber Co., of Ottawa, was presented by his fellow employees with a handsome book-stand. Mr. Buchanan was married in Toronto to Miss Anderson, daughter of Mr. George Anderson, late manager of the Royal Oil Company.

Mr. S. N. Parent, the new Commissioner of Crown Lands for Quebec, is a native of the city of Quebec. He graduated from Laval University in 1881, winning the Governor-General's gold medal and a prize given for the best examination in law. He was elected Mayor of Quebec in 1890, and in 1891 he was re-elected to the same position. In June, 1890, he was elected to the legislature of the province of Quebec, defeating Mr. Routhier, the Conservative and labor candidate, by a majority of 327. He was re-elected by acclamation in March, 1892, by St. Sauveur division of the city of Quebec, and has since been actively identified with public affairs.

## HINTS FOR OUR ADVERTISERS.

Advertising, like every other detail of a successful business, requires close personal attention to ensure good results. Too many advertisers have apparently formed the opinion that once a contract for space is made in a journal, the advertisement will then take care of itself.

Read the advertisements of others. In this way you frequently obtain valuable suggestions.

Advertise seasonable goods, and in a medium which reaches the largest number of probable customers.

The most successful advertisers change their advertisements frequently. This costs an advertiser nothing, while a new advertisement is almost certain to be read.

Readers are asked to mention the source of their information when writing to advertisers in The Lumberman. This will benefit both the advertiser and the publisher.

In the "Wanted and For Sale" Department of the Weekly Lumberman special lots of lumber are often asked for. Manufacturers should scan this column carefully each week.

Lumber manufacturers and dealers having special lots of lumber for sale, or being desirous of extending their trade, should make the same known through the Canada Lumberman. Inquiries received at this office prove that importers and dealers in Great Britain and the United States are constantly on the look-out for Canadian goods, but are not always in a position to locate the stock desired. The Lumberman reaches each week hundreds of dealers and consumers in these countries.

## THE SPOOL WOOD INDUSTRY.

The thread combine has hit in an unexpected quarter, according to a St. John, N. B., paper. It has given the combine a chance to include spool wood as well as spools and thread. There are three factories in Northumberland county making spool wood for the combine, and it buys from a few others. But James Alton, of that county, who formerly sold his output to one of the Scotch thread firms now in the combine, is not running his mills any more. He has plenty of birch and the plant available for turning out a million feet a year. He has probably a million feet on hand, but there is no sale for it except at a very low figure, to the combine.

I HAPPENED to be in a gentleman's business office in Toronto the other day when the representative of an American firm called to solicit an order for goods. "No," said the gentleman, "I don't want any Yankee goods. I've made up my mind not to buy a dollar's worth of American stuff if I can possibly get what will answer the purpose in Canada or elsewhere." On asking the reason of this unexpected rebuff, the American was told that it was due to the treatment which was being accorded to Canada by the Government of the United States under the Dingley Bill. I fully concur in this gentleman's policy. Individually the Americans are good fellows, but as a nation they are given to the perpetration of acts of despicable meanness, especially towards this country. Notwithstanding the tariff wall which has existed between Canada and the United States for nearly twenty years past, the Americans have found a market in the Dominion for many millions of dollars worth of goods annually. If the men who are sent over here to sell these goods were for a time to be given the cold shoulder, after the fashion described above, protests would soon find their way to Washington from the manufacturers which these men represent, and as a result, no doubt a more neighbourly policy would soon be adopted towards this country. Let those who have been in the habit of buying from representatives of American houses try this method of securing international fair play.

* * *

DROPPING into the office of Mr. Carl Zeidler the other day, I was asked if I thought the Government were likely to appoint agents in Germany and France to represent the lumber industry of Canada. My reply that I had heard little of the matter caused Mr. Zeidler to discourse eloquently upon the necessity of such a step being taken, and with his views I entirely agree. "Until the Government make such appointments," he said, "we cannot expect to extend our trade, but if we go about it in the proper way there is no reason that I can see why we should not export a considerable quantity of different woods. The persons appointed should be thoroughly posted as to what timber Canada can supply, as well as with the requirements of the foreign markets. They should act as arbitrators, as it were, in all disputes, thereby protecting the shipper from the sharp practices of unscrupulous importers, and also looking after the interests of reliable importers that the stock supplied is up to the mark." I asked Mr. Zeidler in what lines the largest consumption of Canadian lumber might be expected in Germany, to which he replied: "First, in the piano trade, and second, in cabinet making. These industries consume a very large quantity of lumber, much of which is obtaiued from the United States, while Canada has just the material required; ash, elm, maple, basswood, pine, etc.—we have them in abundance. For the German market the stock should be cut into small dimension stuff, much smaller, indeed, than our manufacturers are accustomed to, but once they got the run of the trade they would, I think, find it profitable, as there would not be the immense waste that there is in cutting deals and long lumber for the British market. Some of our people who have shipped stock to that market have come out at the wrong end, and that was simply because they had no one there to look after their interests."

* * *

MR. C. BECK, of Penetanguishene, Ont., when in Toronto recently, was interviewed regarding the tariff question: To the query, "How do you think the $2 duty contained in the Dingley tariff bill will affect the lumber trade in the Georgian Bay district?" Mr. Beck replied as follows: "I would say that if the Dingley duty is kept on and no export duty on logs and no import duty on lumber put on, it would mean that every mill on the Georgian Bay would have to shut up, and we would have either to ship the logs to the United States to be sawed there or to sell them out and out to the Americans. If an export duty were put on saw logs it would no doubt make the trade stagnant at the present time, but then the $2 Dingley duty would shut out our coarse grade lumber anyhow. As to the threats of retaliation, if we put on an export duty it would be immaterial what amount the Americans will put on, as at present we have a good trade with England for the better grades of our lumber; if the Americans were to want any of the better grades they would have to pay the advanced price, and for our coarse grades of lumber we would have to work up other markets, such as South America, Australia, etc. At present there is, in my opinion, more lumber exported from the United States to foreign countries than is exported to it; therefore, if our people work up that trade, which the Americans have at present, and sell direct to the consumers, they would get the profit which the Americans now reap from our lumber. For instance, I know as a fact there is a large box factory in Tonawanda which receives the principal part of its stock from Canada, manufactures it into box shooks and ships them to South America. In my opinion, if the Government takes a firm stand and puts a prohibitory export duty on logs and other material going into the United States, it might for a short time not be beneficial, but it would before long prove a great boon to Canadians in general." With regard to the imposition by Canada of import duties, Mr. Beck said: "At the present time there is an overstock of lumber in the United States, and they are shipping large quantities of coarse grades to Canada at present—at sacrifice prices. In that way they take our logs, manufacture them, sell the better grades in other countries and flood our country with the lower grades, which is to the great detriment of our trade."

* * *

I OBSERVE that Mr. Geo. M. Warren, manager of the Imperial Lumber Co., of Toronto, has lately been across the border buying some deals. To a representative of the Northwestern Lumberman Mr. Warren thus expressed himself on the much discussed duty question: "Do you know, I believe Canada imports as much American lumber as she exports to the States. Don't look so incredulous," he continued, "you people are making a strong fight against the importation of what you call coarse Canadian lumber into the border states, but here is a little thing for you to put in your pipe and smoke; the cities of Hamilton and Toronto, in Ontario, are now using large quantities of low grade sidewalk plank that was bought in the United States. Now, how do you account for that? You don't give our side of the argument a fair show. We claim that with the few exceptions of some kind of skilled labor, as high prices are paid in Canadian mills as in those of the United States, and by reason of the better machinery which your people use, your lumber is made cheaper than ours. Some of that sidewalk stuff I mentioned a minute ago is shipped all rail from Grayling, Mich., into Toronto. Now, if you think that is a tall yarn, here is another for you to ponder over: When Cutler & Savidge started to build their big new mill and stores up in the Georgian Bay country, they proposed to use norway for construction timber as the cheapest stuff, and our company had the nearest mill to the location which they selected on which to build. We had a logging railroad and convenient timber, and were mighty glad to figure on the bill; we didn't get it though, and quite a long time afterwards, when I met Mr. Cutler in the east, you can imagine my surprise at being told that my prices were far too high. Why, where on earth could you get any lower, said I. 'In Michigan' replied Mr. Cutler, and it turned out that the lumber and timber to build that mill with was shipped across the lake from Michigan because it could be bought from the Michigan mills cheaper than from ours in Canada."

## EFFECT OF AN IMPORT DUTY.

WAUBAUSHENE, ONT., June 25th, 1897.

To the Editor of the CANADA LUMBERMAN.

DEAR SIR,—In reply to your circular concerning the import duty of $2.00 per thousand feet on sawn lumber under the Dingley Bill, I desire to answer your questions as follows:

1. An import duty of $2.00 per thousand feet on lumber entering the United States would to a great extent paralyze the lumber trade of Canada, particularly of the Georgian Bay. Some of the higher grades might be shipped into the United States, but the coarser grades, such as box, etc., would be excluded, for nothing like cost price could be obtained by the manufacturer.

2. If Canadian lumber is to be practically excluded from the American market by such a duty, I see no reason why the Americans should be allowed to enter into competition in Canada, Georgian Bay in particular, in the purchase of timber limits, and should then be allowed to take the lumber in the form of logs into the United States free of duty, either of import or export, there manufacturing them into lumber, and have the advantage of $2.00 against the Canadian lumberman who manufactures lumber in Canada. I therefore feel and have advocated all along that such an import duty under the Dingley Bill should be met by a corresponding export duty on saw logs. The lumbermen of Ottawa have a great advantage over their western brethren for the reason that they are so near the seaboard for cheap shipment to England. They are also nearer the New York and New England markets.

3. As mentioned in clause No. 1, coarse lumber would be affected to the greatest extent, not only because there is so much of it, but because the proportion the import duty bears to the price of coarse lumber is very great. The higher grades of lumber are in much greater demand, and the supply is smaller, and therefore the price being higher, and the demand as compared with the supply being greater than in the case of coarse lumber, it is just possible that the consumer might have to pay a portion of the duty by an increase in the price of the lumber.

4. If Canadian lumbermen are compelled to abandon the United States market, there is no doubt but much larger shipments will be made to the English market, and many lumbermen who now do not ship to England would turn their attention in that direction. I have not considered what other markets might be reached, nor what other methods adopted to find an outlet. There is no doubt but South African countries, and South American and West Indian ports, and possibly distant Australia, would be looked to.

Yours truly,
GEORGIAN BAY LUMBER CO.
J. Scott, Vice-President.

[The above letter was received in response to a circular sent out by the LUMBERMAN enquiring as to the probable effect of the proposed import duty on lumber, a number of replies to which were published in our June issue.—THE EDITOR.]

# THE RETAILER AND Wood-Worker

## BUYING LUMBER.

HAVING had some experience on both sides, the writer thinks he is able to judge as to what constitutes good buying, says S. D. Albright, in Hardwood. Strange as it may seem, there are many who try to buy too close. In the lumber business the buyer who insists on too close prices is often informed that the seller is out of stock, when the fact is some more liberal buyer has sent an order in at the same time, and has been given the preference.

The first requisite to good buying is credit. If you wish three months' time, say so when you ask for prices, and after having bought make your settlement promptly, and pay your note when due. Do not ask strangers to ship you too large a line, as all shippers are chary of new trade. If you buy for cash, pay cash promptly; for a few days' neglect in cash payments always gives the impression that you are inching, and these matters are all weighed by the seller when it comes to future trade.

Be careful that you do not allow yourself to be a mark for the unscrupulous, but try to be able to pay the market price; for while the seller may help you out on some stock sold too cheaply, he will not do it often without counting it against you. Like water, credit seeks its own level eventually, and every action counts in the balance, and I believe that the best buyers, in the long run, are those whom the seller would like to sell to, being prompt settlers (not necessarily cash payers), not asking unnecessarily for odd stock and sizes, and to a certain extent willing to practice the "live and let live" theory in life.

## REQUIREMENTS OF THE BUILDING TRADE.

COMMENT is again made on the increased percentage of low grade white pine lumber that is demanded by consumers, particularly in the building trades, says the Timberman. Many retailers say that this tendency is a growing one, and that whereas some years ago good lumber was in constant request, now it is not much asked for in white pine, the lower grades being made to answer the purpose. This is an unfortunate tendency, and does not speak well for the taste of the community. Honest building requires good lumber, and still there are reasons for the changes which are not discreditable ones. They are found largely in the change of demand from white pine to hardwoods and other soft woods.

We doubt if any less proportion of clear lumber is being used in building than ever, and are inclined to think that this percentage may be larger, but it is of woods which are preferred for finishing in the natural color or for staining. While occasionally white pine is used in this way, it is not usually preferred, its color and lack of figure making it rather monotonous if used for house finish, and consequently the prevailing mania for unpainted work leads to the use of other materials, such as oak, birch, yellow pine and poplar, the latter being a wood which takes stain most admirably.

The high price of white pine uppers has doubtless assisted in this change. In other woods clear lumber can be had at so much lower price than in white pine that they come to be preferred, leaving to white pine painted work which, in the first place, is not in such request as formerly, and, in the second place, will allow the use of a lower grade. From the standpoint of the white pine trade this change is not to be particularly regretted, for the reason that the supply of better grades of white pine is constantly growing less, and the demand is sufficient to take all there is at the old prices.

Furthermore, we should not be too ready to condemn the consumers because of this apparent falling away in taste and in the honesty of materials used. It is, as we said before, a question as to whether the average quality of material which is going into house building is not at least as high as twenty-five years ago.

## CONDITIONS WHICH MIGHT BE DIFFERENT.

UNDER the above heading a writer in Wood-Worker says:

I want to describe a shingle mill which I visited at one time, to show how some men, to save a few dollars, lose sight of the larger number they might secure if they were not so prone to "hold a cent so close to their eyes that they cannot see a dollar at arm's length."

This man had a fair steam plant and several good tools, but the virtue of these tools was more than offset by the awful conditions elsewhere. The lineshaft having been too short, was made longer by driving a piece of two-inch gas pipe over the end, a hole drilled through all, and a carriage bolt put in to prevent slipping. This addition to the lineshaft was put in wooden boxing, since it would take too much time to try and polish the pipe by drawfiling, making it in any manner fit to be in metal bearings. The pulleys on this line of shafting were worth one's time to make a considerable journey to see. None of them were originally intended for this size of shaft, so to obviate this difficulty numerous pieces of strap iron were brought into play and made to serve as bushing by being wrapped around the shaft a sufficient number of times to fill up the hole in the pulleys, some of which were secured from slipping by setscrews, or with keys from the size of a five-inch three-cornered file up to a railroad spike.

The wabbling and other disturbances made in this mill when it was started can be better imagined than described. But to cap the climax he had placed a grindstone on the shaft to take the place of a pulley, attaching it there by taking two pieces of square timber large enough to fill the square hole in the grindstone, cutting a hole through them endwise to fit the size of the shaft, and bolting them to it. As the grindstone would wear the wood and get loose, he drove in wooden wedges to keep it tight. This man was content to get one or two thousand shingles cut every day the mill ran. I hope there are no others.

## HANDLE WITH CARE.

PERHAPS no item of waste about a lumber yard is so little thought of by the laboring men as that of splitting lumber through careless handling. It seems impossible to impress upon the average laborer's mind that boards and plank cannot be slammed about like a pile of stone. The ideal yardman or teamster would think it as great a sin to throw off a load of lumber helter skelter like a parcel of rails, as it would be for his employer to cheat him out of his month's wages. These men have been educated to a knowledge that lumber deteriorates with every careless handling that it gets, and that it is the easiest thing in the world to ruin enough lumber in a minute to equal his wages for a day. But as you walk the street how many neatly-piled wagon loads of lumber will you find, in comparison with loads dumped in any way which was quickest to get it off the wagon? There is no lumber which has a market value, be it ever so low, but is worthy of a care which will protect it from becoming of still less value through its breakage and splitting, such as is sure to follow when lumber is not carefully stacked in layers. And regular layers will not satisfy the careful and well-educated man, for he will not let an inch board lap over the edge of a two-inch plank without building up to a level with the surface of the plank; nor would he allow a one-inch to lap another one-inch, one tier higher than itself. In unloading a wagon load of lumber or a car load of lumber, bearing sticks should be laid the width which the pile is to be, and the lumber should be stacked in even tiers the full width of the bearings, each board or plank laying absolutely flat upon its own surface. Too much carelessness is often manifest in this regard, but a teamster or laborer who has not sense and gumption enough to lay his lumber off in uniform and proper piles is not worth his wages, if he is working for nothing, for he will damage more good stock than the wages of a competent and careful man will amount to.—Hardwood Record.

A Minneapolis Exchange says: The lumber trade is fast degenerating into a prize candy box business. Lumber may never be put up in sealed packages with a ring, set of spoons or some other prize hidden within, but if it is not it will be because of its weight and bulk. Some very reputable and well established lumber firms are doing things that would never have been evolved but for the stress of hard times. One old and highly respected company in the east is offering an office desk and chair with each order for three cars of yellow pine, and for a four car order will throw in a rocking chair. Another firm offers a suit of clothes as a premium for an order of yellow pine. On this coast some lumbermen are making shingles do the work of prizes, in order to sell lumber. Where this thing is going to is a mystery. One should be prepared for any novelty. There was a time when the lumber business was carried along in conservative, dignified channels, but in some quarters it has fallen from its high estate. Perhaps with the return of that epoch called "good times," the dignity of the lumber trade will be restored.

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## IMPORT DUTY ON LUMBER.

TORONTO, June 21st, 1897.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—The trade throughout Ontario appear to be much pleased to learn of the prompt action of a number of prominent men, directly or indirectly connected with the lumber business, in getting together at Ottawa immediately on learning that the lumber schedule of the Dingley bill had been passed by the United States Senate, and laying their views before the Government concerning the serious need of imposing an export duty on logs.

I do not here propose discussing the merits of an export duty. This is a subject which has been thoroughly ventilated in the public press, and the menace which is offered to the lumber trade of Canada in connection therewith is doubtless fairly well understood by the trade and the general public. A report of the Ottawa meeting, as published in the daily papers, makes no reference to another very important phase of the question, which apparently has been overlooked, that is, as to the necessity of an import duty on lumber. The urgent need of such a duty is clearly apparent to all who are familiar with the trade of Western Ontario. The facts simply are, tha large quantities of lumber are being shipped into Canada from the United States, yellow pine from the south having been imported for several years past, and since the United States panic of 1893 there has been a very heavy accumulation of low grade white and Norway pine in the Michigan and Minnesota markets. This has been sacrificed regardless of cost in order to move it out, and Western Ontario has been made one of the slaughter markets. So long as reciprocity in lumber obtained between the two countries, of course the Canadian trade had no complaint to offer, but now being face to face with a United States prohibitory tariff, it is a question of a very different complexion. The marketing of low grade lumber will be a difficult problem for the Canadian manufacturer to solve henceforth ; leaving our markets open to Americans will certainly not aid in a satisfactory solution thereof. This American competition cuts two ways. Not only has it displaced a proportionate quantity of Canadian low grade pine, but the ruinous prices at which it has been sold has naturally caused a corresponding reduction in the price of all low grade lumber sold in Ontario, until now it is a generally acknowledged fact that this class of material is going at much less than cost to the producer. The argument may be raised by the consumer or politician that the above conditions are desirable inasmuch as the public derive the benefit, but it may be fairly asserted that no permanent advantage can accrue to the country by one section of the community profiting by the loss of another. The lumber trade throughout Canada should give no uncertain sound as to their wishes in this matter, and should make very plain to the Government at Ottawa the necessity of safeguarding and caring for the interest of this, the most important branch of Canadian trade, one employing a vast amount of both capital and labor. It is generally believed that the Government will impose an export duty on logs and pulpwood, but any enactment not including an import duty on lumber cannot possibly be satisfactory to the trade.

Yours truly,

C. A. LARKIN.

## INTERESTING LETTER FROM AUSTRALIA.

SYDNEY, N. S. W., May 6th, 1897.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—Messrs. David Maclaren, of Ottawa, and his brother, the doctor, leave here by the "Aorangi," and will be home when this reaches you. They have made a study of the lumber trade of these colonies. Mr. Maclaren read a copy of the letter sent you a couple of months ago, and says his inquiries confirm what I have written. He thinks that the price of lumber is too low, and the immediate future not sufficiently bright to warrant the opening of his British Columbia mill to do trade here yet. Prices are very low. The nominal quotation for Oregon just now is 6/6 per 100 feet, but this is only nominal, and I have heard that lumber has been sold that would not net the Pacific Coast mill more than $6.50 per thousand feet. At such figures Mr. Maclaren is right in his views that it will pay him and Canada better to hold up a bit. The West Coast is producing more timber than the world needs just now, and consumers are fixing the price. When an agent receives instructions from San Francisco to get the best price he can, but sell, everybody knows what the result is likely to be.

Canadian lumber is coming here, and at an average of better prices than from the United States mills, because the average quality is better. Some complaints are made that the Canadians are not so prompt, either in replying to enquiries or in filling orders, as they might be. I think this is the exception rather than the rule. I know that one or two cargoes have been much delayed, and are likely to reach a poor market rather than a good one. The importer is naturally put a little out of temper thereby.

Three or four cargoes have been shipped in a year from the St. Lawrence to Melbourne, to be sold on arrival. Occasionally fair prices were obtained, but when they came in pretty close together, as has happened, the result was unfortunate for the shipper. An effort, with some success attending it, has been made to get orders ahead. This is very much better. Not only will this enable the shipper to know what he is getting, but he can get orders for other stuff besides spruce and pine deals. Norway sends lining and weather boards. From the United Kingdom and Eastern United States some shelving, clear pine, walnut and oak are shipped. Canada could supply these. I have an enquiry before me from Melbourne for oak staves for wine casks, 38 to 40 inches long, inches wide, and 7/8 to one inch thick. These Canada can supply. The timber ships could be utilized to carry other goods, helping the timber trade and manufactures of the country.

If any of your subscribers can supply the oak staves referred to, I shall be glad to hear from them. It would be necessary to send price f.o.b. at New York, as until there are regular ships from the St. Lawrence they must go that way. Samples are also asked for. The only method would be to saw a stave up to the regulation length of parcel post shipments and mail to me in that way.

Yours truly,

J. S. LARKE.

## OUR EXPORT LUMBER TRADE.

TORONTO, June 11th, 1897.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—I see by letters in your columns and also in the daily press that there seems to be a great desire on the part of our lumbermen, more particularly the manufacturer, to deal with France, England, Australia, South Africa and South America. They have cited cases where the goods they manufactured were sent to these foreign points by American dealers who purchased the goods from them or from some of our dealers here, and they ask the question, "why can we not sell these goods direct to Great Britain, France, South America, etc., and get the credit that is due to the character and quality of our lumber, and also the full value of it, instead of allowing Americans to have it?" To this, I will answer that we cannot do so very well under present conditions. This export trade is a peculiar line of the lumber business, and has to be learned. You cannot jump into it all at once. It has taken a great deal of time and money to open up this trade, and to learn the wants of the different markets, and also to get acquainted with the people and their financial standing, the peculiarities of their grading, their customs laws, the value of their money, etc.

Judging from the expressions of some of the writers, it would appear that they think all that would be needed to step into these markets would be to write to some dealers in France, or South America, or England, and tell them that they had certain kinds and sizes of pine or hardwood lumber for sale, and that they would immediately receive orders for it at big prices. Now, let us consider it for a minute. Would the writers of some of these articles be able to write an intelligible letter in French or Spanish to a South American dealer? Would they be able to write an intelligent letter to an English or Scotch importing house, i. e., making an offer to sell them goods such as they deal in, quoting them prices in their currency and their standards of measurement? I question very much if there could be found many in this country who could do so. They have never had the opportunity to learn this branch of the trade, and it must be learned before business can be done with a foreign country. We have been so long making our lumber for the American trade that we practically do not know any other. If we want to go into the exporting trade we have got to commence all over again. For instance, the English market takes practically nothing from us but deals, 3 in. No. 1, 2 and 3, and if trade is slack they do not want any No. 3, and as we can make more of this third quality than of ones and twos, the value of the English market to us depends on its ability to take our lower grades. Unless our mills are equipped and prepared to cut the logs to special order, and our manufactures in a position to select their lumber in a way that they are unaccustomed to, they cannot hope to sell much of their ordinary cut stock there.

The South American market calls largely for one line of pine in size and quality, 1 × 12 – 16, of a quality of fine dressing, and designated as a South American shipper. This is practically all we could ship there.

The West India trade calls for much the same class of stock, except that there is a little larger range of widths, from 8 to 12 in. wide, and the quality is not quite as high.

The regulations in regard to inspection on shipments to many South American points are very rigid, and there are few shipments made that are accepted as invoiced; deductions are the rule, and sometimes they are extremely heavy, and the grading very arbitrary. Their customs regulations are costly and cumbrous, making it almost necessary to have an agency there, which only large and wealthy concerns could afford to do. The terms of payment is generally six months.

The French trade is generally for specific sizes and kinds. It would be impossible to sell a lot of lumber such as is cut in any of our pine or hardwood mills. Their measure is the metric, which I have no doubt would set some of our manufacturers or dealers figuring to turn out an invoice of three or four different kinds and sizes, reduced from our superficial feet board measure to their system.

These are some of the difficulties in the way of doing an export business. The question is, can they be overcome, and how? To the first question, I would say I think they can. If the American dealers and large exporting companies can do this business, I see no reason why we should not, providing we are prepared to spend some time and money to learn to do it right. The Export Lumber Company, of New York, which does the largest South American trade, has spent many thousands of dollars in building up their trade, and they could not have got it had they not done so; there has been times when they have had to carry very heavy loads during some of the periodic disturbances in some of the South American republics.

Some of the large New York and Boston houses have done a nice export trade with England in finished goods, hardwood and pine, by giving their customers what they wanted, and by keeping in touch with the markets of the world, being enabled to do this by carrying large stocks of all kinds of lumber, and having machinery of the most modern kind, with the aid of which they could promptly fill any orders they may be entrusted with.

How can we put ourselves on the same footing as Americans, and get a share of the export trade? By working for it is one way, and in order to place ourselves on same footing as Americans, we must establish lumber yards, where all kinds of lumber is kept in stock all the time. I mean such yards as you see in Buffalo, Albany, New York, Boston, etc., where the lumber from many mills is concentrated, sorted and graded, according to size and quality—a place where an intending purchaser can come with the certainty of finding just what he wants and any quantity of it. Have we any such yards? I am sorry to say we have not. There are some local lumber yards carrying stock sufficient for the wants of their immediate neighbourhood, with perhaps a small quantity suitable for export, but is there a yard in the country carrying a stock of such lumber as is carried by any of the large pine or hardwood dealers in Buffalo or New York? Supposing a London, England, dealer were to come here and ask where he could get a large quantity of 3"x4" maple, birch, elm, basswood or pine. Where would he get it except by travelling all over the country in hope of picking it up at the many mills scattered all over the country. If he did find it, would the mill men want to sell one or two kinds and sizes alone? Would it not be better if there was a lumber merchant or a company to whom they could sell the whole of their stock, all kinds and all grades, thus relieving them of the necessity of looking after a number of purchasers, while the buyers would be attracted here if there was any place where there was a fair stock and assortment of kinds and sizes, that they could see and judge for themselves. Under present conditions this is now impossible. There is no yard carrying any stock. Buyers will not come where they cannot get an assortment, or where there is no competition.

Transportation charges are higher where the trade is scattered ; there is nothing to attract purchasers. We ought to be in as good a position as the dealers in the United States to distribute the output of our mills instead of selling to them in the rough, and have them dress and otherwise prepare the lumber for further export, and if we can only find some of the capitalists of this country who are prepared to spend some money to establish lumber yards at our principal distributing points that will handle the output of our mills in such quantities that they will be able to attract intending buyers, and who will establish planing and re-sawing mills to further prepare the lumber for the export trade, and the saw mill men will deal fairly with such wholesale yardmen, by agreeing to sell to them instead of selling to American dealing, thus enabling our own wholesale yard men to compete for the export trade on fair terms with our neighbours, then, and not until then, can we expect to get a share of this foreign business.

Yours truly,

"LUMBERMAN."

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. III. TORONTO, ONT., JUNE 30, 1897 No. 26.

## CANADA LUMBERMAN

PUBLISHED BY

C. H. MORTIMER

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WANTED.

POSITION BY BOOK-KEEPER, WITH EXperience, in wholesale lumber office. Good references. Apply 456 TALBOT STREET, LONDON.

WANTED.

LUMBERMEN TO ADVERTISE IN THIS column stocks of lumber for sale. Probable purchasers look for this information. Address, CANADA LUMBERMAN, Toronto.

WANTED.

PRICE ON BASSWOOD OR POPLAR squares 1¼"×42" long, delivered on cars in New York, for export, in car loads. B. SOUTO & Co., 161 Front St., New York.

SITUATION WANTED.

BY EXPERIENCED PINE AND HARDWOOD Lumberman, as Buyer, Salesman or Inspector. Satisfactory references; low salary. Address "W.," care CANADA LUMBERMAN.

FOR SALE.

ONE HALF INTEREST, OR THE WHOLE, of the Kootenay Lake Saw Mill property at Kaslo, B. C. This is probably one of the most profitable milling concerns in Western Canada. Sales about $100,000 per annum. For information apply to the proprietor, G. O. BUCHANAN, Kaslo, B. C.

POSITION WANTED.

THOROUGHLY EXPERIENCED LUMBERman desires position with reliable Canadian lumber firm, as office man, book-keeper, woods, river or mill superintendent; can read and write French; 48 years of age, and of good moral habits; at present managing yard and car trade of large manufacturing firm. Fair salary. Address, "R.A.," care CANADA LUMBERMAN.

## EXTENSIVE SALE BY AUCTION

OF 1,837 SQUARE MILES

# Timber Berths

IN THE PROVINCES OF ONTARIO AND QUEBEC

THE UNDERSIGNED HAS RECEIVED INstructions from Messrs. McLachlin Bros., of Arnprior, to sell by Public Auction at the Russell House, in the City of Ottawa, on

**Tuesday, August 10th, 1897**

at two o'clock p. m., in separate parcels, the following

TIMBER LIMITS:

| | | | | | |
|---|---|---|---|---|---|
| Parcel 1 | Keepawa and Dumoine | 573½ | sq. | miles, | Que. |
| " 2 | Block A | 50 | " | " | " |
| " 3 | Keepawa | 230¼ | " | " | " |
| " 4 | Bonnechere | 257¼ | " | " | Ont. |
| " 5 | " | 49½ | " | " | " |
| " 6 | Petawawa | 130 | " | " | " |
| " 7 | Madawaski | 201½ | " | " | " |
| " 8 | " | 246½ | " | " | " |
| " 9 | " | 54½ | " | " | " |
| " 10 | " | 13 | " | " | " |
| " 11 | Amable du Fond | 22¼ | " | " | " |

With parcels 1, 3, 4 and 7 are supplies and shanty plant which purchaser of such parcels must take with limits at valuation.

For further information, conditions of sale, &c., apply to Messrs. McLachlin Bros., Arnprior, Ontario.

PETER RYAN, Toronto,
Auctioneer.

FOR SALE.

IF YOU WANT DRY DIMENSION CUT HEMlock lumber, common and good dressing pine, write to J. JACKSON & SON, Hepworth, Ont. Correspondence solicited.

### CURRENT TRADE CONDITIONS.

ONTARIO

Accurate statistics of the quantity of lumber shipped from Ontario in the month of June would, we believe, show a record unequalled by any single month for the past two years. From every section the report comes to hand of numerous enquiries for stock for immediate shipment to the United States, attributable to the probability of an import duty rather than to the early requirements of the trade. Importing firms across the border have shown great eagerness to obtain Canadian stock before the duty should become operative, and manufacturers and dealers on this side have in many cases been enabled to obtain higher prices for desirable lumber, but this must not be taken as indicative of a permanent advance. A large quantity of pine lumber has been shipped from the Georgian Bay district by both railway and vessel to Albany, Buffalo, Oswego and other points, and the better grades are well sold out. Ottawa trade is also active. Many of the mills are cutting deals to fill contracts entered into last fall. There is a fair demand for hardwoods, the call for mixed lots showing the requirement to be quite general. Elm is enquired for daily, and such stock as can be obtained brings a high figure. There is very little to be obtained in the country, last season's cut being practically sold out. Heavy shipments of maple and basswood have also been made, but the American market is now well supplied. Some orders of black ash have been filled. There is a scarcity of XX shingles, and prices are somewhat stronger. Of XXX there is an ample supply.

QUEBEC AND NEW BRUNSWICK.

The lumber trade generally in Quebec city is in a very healthy condition, and exporters and their staffs are having all they can do to attend to the very large shipments being sent forward to Great Britain. The different coves along both sides of the river present a lively appearance, the stock of timber being very large. The recent deliveries have been exceedingly heavy, and shipments are about a third greater than last season up to the present time. Both ship laborers and boomsmen are having constant work, and the impression is that this will continue till well on in the autumn. The demand for wood goods in the European markets still keeps firm, notwithstanding the slight decline, in some of the European markets, in spruce deals and one or two other articles. The mills throughout the province are working to full capacity, mostly on foreign orders. Building operations both at Quebec and Montreal are greater in volume than last year, which has increased the local requirement. Many cargoes of lumber have gone forward from the ports in the maritime provinces. It is estimated that since the first of April over one hundred million feet has been exported from St. John alone, while from other points the record is proportionally large. Prices remain firm for nearly every class of goods.

MANITOBA AND BRITISH COLUMBIA.

Work has been resumed at a number of the mines in British Columbia, and this has increased the local demand for lumber. The trade continues in a prosperous condition so far as volume is concerned, and in some instances slightly higher figures have been obtained for special stock. The recent brisk demand for red cedar shingles has developed a scarcity of these, and manufacturing is now being carried on more vigorously. The report from Manitoba and the Northwest is hopeful. The Rat Portage mills are taxed to their full capacity to supply the demand for lumber, particularly dressed stock.

UNITED STATES.

The time is at hand when the lumber trade of the United States takes on its summer quietude, when dealers do not expect business, but content themselves with making arrangements for the fall trade. As yet this year this quietude has not shown itself in lumber orders, as generally there is a fair trade doing in comparison with the record of the past six months. It is believed by many that, owing to peculiar conditions, the extreme inactivity which usually characterizes business during the months of July and August will this season not be experienced. The movement of lumber is holding out well, and wholesale dealers, retailers and consumers show a stronger disposition to contract for stock. Manufacturers along the western lakes are said to be encouraged by present business, as well as the outlook. The production of white pine has been greatly reduced within the past two years, and with the revival of demand a marked advance in prices is likely to follow. Some good sales of inch lumber have been made in the Minneapolis district, where crop prospects have

given an impetus to business. At Buffalo and Tonawanda there is a feeling of satisfaction among the trade. Dealers are purchasing more liberally in view of a probable advance in price as the result of the final settlement of the tariff question. Considerable stock is going east. Large cargoes of spruce are arriving at Boston and eastern points, but find ready purchasers. In hardwoods the chief demand is confined to elm and oak. Basswood prices are low, firsts and seconds selling at $17. Poplar is strong in the east. Prices are firmer than formerly.

FOREIGN.

The Jubilee celebration in Great Britain last week made it impossible to do business, but now that this hindrance to trade is over, orders are being placed with the usual steadiness. The consumption of wood goods at the various ports is enlarging, and dealers are kept very busy supplying the demand from the different sources. At Glasgow house building has been proceeded with on an extensive scale, and gives promise of continued activity. Two cargoes of deals from Montreal and Quebec are to hand at that port, as well as a considerable quantity of goods per regular liners. A number of cargoes from the St. Lawrence have arrived at London, and fear is expressed that the market will be overburdened with stock. In hardwoods trade is quiet, and consumers are purchasing in a hand-to-mouth policy. Some good orders have been booked at Liverpool, and the report from the surrounding country is encouraging. The Australian market is not active at the present time. Wherever possible shippers should secure orders in advance before shipping stock.

## STOCKS AND PRICES.

CANADA.

The C. P. R. are carrying large quantities of lumber by their Owen Sound branch.

Wm. Peters moved thirteen cargoes of lumber from his Parry Sound mill to the Toledo yard in one week recently.

The Sheppard & Morse Lumber Co., of Ottawa, have a large quantity of Ottawa pine now being rafted at Papineauville, for Quebec.

The steamship Armington sailed from Montreal last week for Liverpool, Eng,, with 1,672 standards of deals, representing 3,309,410 feet.

About one thousand dollars' worth of laths were burned at Three Rivers, Que., on Monday last. They were the property of the Vermillion Lumber Co., and were insured.

Mr. William Mackey's raft of Ottawa square and waney pine timber arrived at Cap Rouge Cove, Quebec, on June 24th. This timber was cut on Mr. Mackey's Amable du Fond limit on the Upper Ottawa, and is considered a very prime parcel. The raft is still unsold.

On June 4th the British ship Speke, which sailed from Moodyville in February with lumber, arrived in Sydney, N. S. W. The Speke, it will be remembered, had her cargo shifted on going to sea and had to put into Victoria to reload. She was one of the largest lumber vessels that ever loaded there, her cargo being over 2,000,000 feet.

FOREIGN.

Messrs. Taylor & Crate, of Buffalo, want soft elm and black ash.

There is a strong call for lath at Buffalo; shingles are rather easier, but are yet scarce.

F. R. Lingham has lately shipped a large cargo of lumber from Port Blakeley to Buenos Ayres.

G. Elias & Bro., of Buffalo, are in the market for ash, basswood, birch, elm, maple and hickory.

Bill timber is in active demand at Manistee, Mich. Shingles are improving both in demand and price.

Trade at Tonawanda is picking up a little. The demand ranges from box to 3 and 4 inch good. Barn boards, clear, and shaky dressing are selling about as usual.

At Baltimore poplar is in light supply, but there is very little demand, and prices are low. Ash is weak and meets with slow sale.

The lumber shipments from Alpena, Mich., up to June 22nd aggregated 34,000,000 feet of lumber, 3,855,000 shingles, 300,000 pieces of lath and 350,000 pieces of cedar.

At Minneapolis and other points in that district there is said to be a famine in red cedar shingles. Dealers cannot fill the orders. The price is $1.90, and $2 could be obtained.

Lumber shipments from Menominee, Mich., are said to be quite brisk. Perley, Low & Co. are shipping at the rate of 8,000,000 feet per week from Marinette, Peshtigo and other points.

During the three months since opening of navigation it is estimated that double the amount of lumber business has been done at Tonawanda than during the corresponding period last year. The better grades are being held by dealers for a firmer market.

Marsh & Higby, of New York, have purchased the entire cut of the Ludington, Wells & Van Schaick Company's mills at Menominee, Mich. There is over 4,000,000 feet, and the price is said to be nearly $30 per thousand. Stewart Bros., of Buffalo, formerly handled this stock.

A Chicago hardwood dealer states that his business in June has been fairly satisfactory as far as volume was concerned, but prices were not altogether satisfactory. In some cases there has been inability to obtain goods, particularly quartered oak, poplar squares, thick soft elm and some special classes of goods.

As a general rule the stocks of hardwood in the New York market are light, but prices are rather weak. There is somewhat of a scarcity of plain sawed white oak, and while the stock of quarter sawed white oak is rather heavy, prices on both these items are firm. Red oak stocks are light and prices weak.

The Pacific coast shingle mills are operating day and night, but are unable to supply the demand for red cedars. A Minnesota dealer was in Washington last week endeavoring to purchase 300 car loads, but he is said to have secured only 20. The May shipments show a record ahead of anything for many years.

Reports from Portland, Maine, state that Nova Scotia spruce is arriving in large quantities. Cargoes of 2 inch random, with some 2 x 3 and 2 x 4, have sold as low as $11.50. Frames have declined to $13; yard sizes, not much in demand, are quoted at $12.50 to $13; random, $12. Hemlock boards range from $9.50 to $10.50. Laths are in good enquiry, especially 1⅝, which sells at $2. Shingles are dull.

The following are the ruling quotations at Boston for leading dimensions: Spruce—Frames, 10 inches and under, $13.50 to $14; frames, 12 inches, $14.50 to $15.50; 14 inches, $16; boards, planed one side, $10.50 to $12; planed on one side and matched, $13 to $14; kiln dried flooring, clear, $23 to $27; No. 1, $19 to $22; No. 2, $16 to $17.25; extra spruce clapboards, $30 to $32; clear, $28 to $30; second clear, $25 to $27; laths, 1⅝ in., $2.25; narrower, $1.65 to $1.70. Hemlock—Eastern hemlock, $10.50 to $11.50; No. 2, $10 to $10.50; rough boards, $9; matched boards and planed one side, $10.50 to $12.50. Cedar—Extra cedar shingles, $2.50 to $2.60; clear, $2 to $2.25; second clear, $1.60 to $1.75; extra No. 1, $1.25. Pine—Coarse stock, No. 2, $16 to $17; outs, 8.50 to 9.50; rough edge pine, $9 to 11; extra clapboards, eastern, $35 to $40; clear, $30 to $35; second clear, $28 to $30.

## QUEBEC SHIPMENTS.

Barque Andora cleared on the 15th inst., with a cargo of timber for Liverpool, on account of Dobell, Beckett & Co.

The steamship Glenmoor, with a full cargo of spruce deals, etc., from Pierreville and Montreal, passed Quebec on the 16th inst., for the U. K.

Barque Hovding, lumber laden for Tayport, left Quebec for sea on the 7th of June, the cargo having been supplied by the McArthur Bros. Co., Ltd.

Barque Cleveland, from Liverpool, arrived in Quebec on June 13th., and is now loading a cargo of timber for McArthur Bros., at New Liverpool Cove.

A small sailing vessel of 400-500 loads capacity was recently chartered for a full cargo of timber, Quebec to a French port at 22/6 calliper, which is considered a very fair rate.

The steamship Veva, with a full cargo of timber and deals, left Quebec for London and Southampton on the 12th inst. This vessel was loaded by Dobell, Beckett & Co.

The steamship Aloedene arrived in Quebec on the 14th inst. After discharging her inward cargo she will load a cargo of timber and deals for Messrs. McArthur Bros. Co., Ltd.

The steamship Strathgyle, Captain Jones, from New York, arrived on June 13th, and went into Indian Cove to load a cargo of lumber, etc. This steamer is consigned to Harold Kennedy.

The steamships Antwerp City and Cynthiana are now in the Louise Basin, Quebec, loading part cargoes of lumber from the Lake St. John district. Both vessels go to Montreal to complete loading.

The steamship Daybreay, with a complete cargo of timber and deals for Liverpool, left Quebec on the 19th inst. Steamship Lammermoor, Captain Lascelles, for Glasgow, also sailed on the same day.

The steamship Eveline, from Hartlepool, in ballast, arrived in Quebec on the 7th of June, and went into Bowens Cove, Sillery, where she loaded a full cargo of timber for Dobell, Beckett & Co. This steamer left Quebec for Manchester, Eng., on the morning of the 22nd inst.

Within the past two weeks the Calvin Company, Ltd., and the Collins Bay Rafting & Forwarding Co. have delivered four large rafts in the port of Quebec, the contents of which were distributed to sundry parties. They consisted very largely of square oak and waney board pine timber.

The steamship FitzClarence recently arrived in Quebec, from Montreal, partly laden, and completed cargo with spruce deals from the Lake St. John district. The steamer berthed in the Louise Basin, and is reported to have carried one of the largest cargoes of lumber that ever left the port of Quebec in one bottom.

## PINE AND SPRUCE MARKET.

The Timber Trades Journal, of London, Eng., thus reviews the British market for pine and spruce: The Canadian shipments arriving this week are the forerunners of an unusually heavy first-open-water shipment from the St. Lawrence both in pine and spruce, and judging from the amount of wood sold on contract, as well as the considerable amount which there now seems no doubt will arrive on consignment, the supply of Canadian goods will be fully equal to the demand this year. Fortunately the consumption is good, with every appearance of continuing, and on this, as well as the manner in which consignments are sent forward, the fate of prices later in the season depends. The position of Canadian hardwoods at the present time is stronger, as we learn that at Quebec there are practically no stocks of oak or elm in the hands of manufacturers, and the same applies also to western waney board pine at that port. Amongst the arrivals this week to the Surrey Commercial Docks is an entire cargo of Hawkesbury wintering pine, about 70,000 pieces, 1st, 2nd and 3rd, of regulars and oddments, the first and second of which struck us as being an exceptionally fine lot.

## BUSINESS NOTES.

Harry M. St. Clair & Co will engage in the woodworking business at Beverly, Mass.

The Manhattan Lumber Co. has recently engaged in business in New York, N. Y.

W. H. Treworgy, of Boston, who became financially embarrassed some months ago, has received his discharge from the court.

## SHIPPING MATTERS.

The first sailing ship to leave the port of Quebec for sea this season was the barque Hefhi. This vessel cleared for Fecamp on the 7th of June.

The following lumber charters are reported: Bark Robt. S. Besward, Pensacola for Rio Janeiro, $13; s.s. Whelburn, Miramichi to w. c. England, deals, 42s 6d; s.s. Micmac, St. John, N. B., to Hull, deals, 40s 6d; Amyl, St. John to Dublin or Belfast, 40s; Polycarp, St. John to Liverpool, deals, private terms.

The saw mill of Simeon Magnaw at Point aux Trembles, Que., was destroyed by fire last week.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Arnprior to Montreal, $1.50 per M ft.; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. To New York for boat delivery, lots 50 M ft. and over, $2.50 per M ft., under 50 M feet $3.25 per M ft. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Boat delivery, lots 50 M ft, and over $3.00 per M ft., under 50 M ft. $3.75 per M ft Parry Sound, $4.00 per M feet; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively: Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Spragge, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c. From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Central Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods.

## BRITISH COLUMBIA LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

THE mills throughout the province are quite busy, and are likely to continue so, as orders are now in the offices to keep them running for some time. The Brunette Saw Mills have just filled an order of 22,000 feet of clear cedar, 14 x 14 inches, 12 to 16 feet in length, for China. Another order was five carloads of immense fir planks, to be sent to Ottawa, to be used in building lumber barges. The Royal City Mills have also shipped to China 600,000 feet of cedars in sticks a foot square.

Mr. J. G. Scott, of the Pacific Coast Lumber Co., commenting on the lumber situation, remarked that they had been working long enough at low prices, and that, possibly, now would be a good time for concerted action of some kind looking to the obtaining of better prices.

### COAST CHIPS.

The Smelter Lumber Co.'s mill at Trail had cut 1,600,000 feet of lumber up to the first of June.

The J. A. Sayward Lumber Company are erecting a saw mill at Nelson, with a daily capacity of 30,000 feet.

A contract has been made with Mr. M. P. Tindorf to erect a saw mill, lath mill and shingle mill at Wardner.

The box nailers at the Brunette Saw Mills recently struck for an advance of wages from $1 to $1.15 per hundred boxes.

It is stated that the Cowichan saw mill at Genoa, which has been lying idle for the past three years, will probably commence operations about the 1st of October, under the management of Wm. Gidley, for the Mossom-Boyd Co.

A cross-section of one of British Columbia's giant fir trees has been forwarded to Kew Gardens, London, England, the great botanical and forestry display centre. The section measures 6 feet 9 inches in diameter, and is without knot or blemish.

NEW WESTMINSTER, B. C., June 19, 1897.

## OTTAWA LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

### FAVOR AN EXPORT DUTY.

LUMBERMEN in this district are naturally aroused at the recent action of the United States government confirming the duty of $2 per thousand feet on lumber. There are few who are not now in favor of the Canadian government imposing an export duty on saw logs, while many were opposed to this action in case the American duty was kept down to $1. A fortnight ago an impromptu convention of lumbermen was held at the Russell House, and among those present were the following: Messrs. Levi Crannell and F. Bronson, Bronson & Weston Lumber Company; J. Scott, vice-president Georgian Bay Lumber Company; E. B. Osler, M. P., president Dominion Bank; Senator Cox, president Bank of Commerce; G. B. Brooderick, manager Molsons Bank; Senator Drummond, representing the Bank of Montreal; Z. A. Lash, Q.C.; J. B. Fraser, vice-president Bank of Ottawa; L. Burton, Burton Bros., Byng Inlet; W. Mason, Wm. Mason & Sons; Thomas Mackie, M. P.; James S. Shearer, Montreal; James Mather, Keewatin Lumber Company; George Burns, general manager Bank of Ottawa; J. R. Booth; Peter Whelan, Sheppard-Morse Lumber Company; E. W. Rathbun, Rathbun Lumber Company; Robert Hurdman, Charles E. Read, Hull Lumber Company; W. C. Edwards, M. P.; D. Murphy, Ottawa Transportation Company; Senator Owens, Owens Lumber Company; H. K. Egan, Hawkesbury Lumber Company; Alex. Barnet, Renfrew; C. McLachlin, McLachlin Bros.; E. S. Leetham, estate James Maclaren; W. C. Hughson, Gilmour & Hughson; C. J. Pusey, President Irondale, Bancroft & Ottawa Railway Company; Alexander Fraser: E. C. Whitney, St. Anthony Lumber Company, and others.

Mr. Levi Crannell was elected chairman, and the whole question of duties was fully discussed. The policy of allowing our raw material to be manufactured in the United States was condemned. A deputation representing the convention was appointed to wait upon the government. This deputation obtained the assurance of Sir Charles Tupper that no objection would be offered by the opposition, and Mr. Fielding promised that some steps would be taken to meet the wishes of the lumbermen. A few days later Mr. Fielding gave notice that the government would ask for authority to give power to the Governor-General to impose an export duty on saw logs and pulp wood during the time parliament was adjourned whenever the cabinet should deem such a step advisable. This power has since been granted by the House, to the satisfaction of lumbermen generally.

### THE SAW-DUST BILL.

A bill was introduced in parliament last week to amend the Fisheries Act by giving the lumbermen another year's exemption from the operation of the law prohibiting them from dumping saw-dust into the Ottawa river. Senator Scott stated that it was impossible for them to consume their saw-dust without changing their mills from water to steam power. They claimed that the enforcement of the law would mean the closing up of the mills and the discharging of a small army of employees, and the government did not feel that it could recommend such a course at the present time. Sir Richard Cartwright said: "It is exactly six and twenty years since I introduced the first bill to prevent this nuisance. These gentlemen within Ottawa have had six and twenty years notice, and I think that is long enough." The act was finally passed extending the time until May 1st, 1898.

### INSURANCE FOR MILL MEN.

The Hull Lumber Company have inaugurated a system of insurance for their employees. Arrangements have been made with the Railway Accident Insurance Co. to introduce their employees' general collective system of accident insurance, in order to give the firm's men the opportunity of insuring and protecting themselves and family in the event of meeting with accidental injury or death. By this arrangement greatly reduced rates are obtained, and owing to the dangerous work in which they are engaged, it is hoped the men will avail themselves of the opportunity offered. The step is a commendable one on the part of the company.

### INDIFFERENT LENGTHS.

Messrs. John McEwan and H. M. Gillett, lumbermen, of Bay City, Mich., were in this city recently.

A lumber train of about twenty-five cars was wrecked on the Canadian Atlantic railway at South Indian. The cars were badly damaged.

The suit between Mr. Alex. Fraser and the Hull Lumber Company regarding the Table Rock property at the Chaudiere has been settled, the latter having agreed to remove all the buildings by the first of September.

Messrs. Wm. Mason & Sons have lately added a planing mill to their already extensive plant. They report an active demand for building timber, and expect their cut of pine this season to reach fifteen million feet.

OTTAWA, ONT., June 23, 1897.

## CASUALTIES.

—Ernest Seguin, of Montreal, had his hand badly lacerated in Lalonde & Girard's saw mill.

—Moses Sommers, employed by the Longford Lumber Co., was drowned at Longford Mills, Ont., recently.

—On May 28 Michael Leaby was drowned while working on a raft of timber in the Ottawa river near Pembroke.

—Mr. Neil Hunter, a saw mill owner who lived near Schaw Station, Ont., was recently thrown out of his rig and killed.

—Wm. Ewart was seriously injured by coming in contact with a circular saw in W. H. Fowld's saw mill at Hastings, Ont.

—A young man named Edmond Pelnaud met his death recently by falling into a log chute at McLaren's mills at Buckingham, Que.

—By the explosion of the boiler in Jean Baptiste Rheault's saw mill at Sable Lake, Notre Dame des Anges, Que., A. Fissett, the engineer, was killed.

The Jenckes Machine Co., of Sherbrooke, Que., have lately furnished "Crocker" turbines to the following: The Chicoutimi Pulp Co., Chicoutimi, Que., three wheels; the Lake Megantic Pulp Co., Lake Megantic, six wheels; Boston Rubber Co., Ltd., of Montreal, one 55-inch wheel; Royal Paper Mills Co., East Angus, one wheel, for driving their saw mill; Drummondville Co., for driving their dynamo, one 50-inch wheel; North Shore Power Co., four 20-inch wheels, direct connected to dynamo; Champoux Lumber Co., D'Israeli, two wheels,

# THE NEWS.

—Mr. Vance is building a new saw mill at Parry Sound, Ont.

—R. C. Innis contemplates opening a lumber yard at Portage la Prairie, Man.

—Sicken & Co. have nearly completed their lumber and planing mill at Sombra, Ont.

—Ritchie Bros., of Aylmer, Ont., have started the old Cormier saw mill in operation.

—The Hardy saw mill at Lime Bank, Ont., has been fitted with modern machinery.

—The R. H. Smith Co. are erecting an addition to their saw works at St. Catharines, Ont.

—The Nova Scotia Lumber Co. have decided to rebuild their mill at Sherbrooke, Que., recently destroyed by fire.

—Messrs. Laurie & Gillies, of Parry Sound, have purchased Mr. Storey's saw and shingle mill at Orrville, Ont.

—Messrs. F. McGibbon & Son, lumber dealers, Sarnia, Ont., report business good in their locality.

—An electric light plant is being installed in S. P. Benjamin's saw mills at Windsor, N. S., by Mr. F. E. Norton, of St. John.

—Mr. James Jaines, late of Hepworth, has purchased a site from Mr. A. Oastler at Parry Sound, and will erect a saw mill thereon.

—Mr. Jas. Wilson, of Wallaceburg, Ont., has his new saw mill in running order, and is cutting up a large quantity of this season's logs.

—George Bail, a contractor of Montreal, was recently before the police court for obtaining lumber under false pretences from Prefontaine & Co.

—McDonnell & McDougall have lately purchased the retail lumber business of J. H. Fraser, at Wallaceburg, Ont., and report a good business in their locality.

—Messrs. Blondie Bros. & Co., of the North Chatham planing mills, handled over 1,500,000 feet of lumber last year, and report prospects good for this season's trade.

—The Sable and Spanish Boom and Slide Company of Algoma have been granted supplementary letters patent limiting its existence to twenty-five years from March, 1885.

—Messrs. Biggs & McCormick, saw millers of St. George, Ont., have secured a large quantity of logs for this season's sawing, and report business very satisfactory in their locality.

—The Wilson Company, of Montreal, has been granted incorporation, with a capital of $100,000, to deal in fuel, lumber and tan bark. The promoters are Messrs. Jos. Patrick, David Mitchell, Wm. Mitchell and G. A. Wilson.

—The St. Paul & Tacoma Lumber Co. sawed in its mill at Tacoma, Wash., the other day, a single stick scaling 10,276 ft. by Doyle's rule and 8,624 ft. by Scribner's. The stick as it came from the mill was 6 feet 4 inches at one end, 5 feet 2 inches at the other, and 1½ inches thick. The log was 30 feet long, 9 feet in diameter at the butt and 6 feet at the small end. It was taken to the mill in three sections, each occupying a car.

—The Natural History Society of Montreal held their annual excursion last month. Arriving at La Rouge, the party, on invitation of Hon. J. K. Ward, proceeded to one of the shanties tenanted by his lumbermen, where an appetizing lunch had been prepared, consisting of the bill-of-fare dear to the heart of the river-driver. The menu embraced pea-soup, pork and beans, good home-made bread and butter, and green tea without milk or sugar.

—The formation is announced of the Patent Cloth Board Company, of Parry Sound, with a capital of $40,000. The principals in the enterprise are Messrs. W. H. Marcon and W. W. Keighley, of Toronto. The forests adjacent will furnish suitable raw material for the making of cloth board for textile manufacturers, for which a market will be found in Great Britain and elsewhere. The machinery has been obtained from the United States.

—A new pulp wood saw mill has been introduced in the Port Arthur district. It is built on a big scow. The log is carried from the water by an endless chain, shifted to a set of barbed rollers, from which it is carried to a table with a guide. When it is in right position a lever is pressed and the big circular saw cuts it. By an automatic arrangement the piece of wood is rolled off the table down an incline into the water. It is possible to cut 75 cords a day with the machine.

# WOOD PULP DEPARTMENT

## VALUABLE MANUFACTURING SITE.

The attention now centred in water powers as a means of developing electricity, and the increasing adaptability of the latter for commercial purposes, justifies the following description and illustrations of the Chaudiere Falls. These falls are situated on the Chaudiere river, about two miles from its junction with the St. Lawrence river, six miles above the city of Quebec, and are said to offer excellent facilities for manufacturing pulp, etc. It is the only water power of any size now available on the south shore of the St. Lawrence in that vicinity, and will probably be utilized at an early date for supplying electric light and power to the adjacent municipalities.

The site is especially suitable for a pulp or paper manufactory, being centrally situated as regards both railway and water communication, and supplies of wood can be obtained in unlimited quantities at very low prices.

At the request of Messrs. Hall & Price, of Quebec, a report on the power of the river at the falls was made by Mr. W. A. Ashe, C.E., of Quebec. The report states that from the cross-section of the river, at the point A-B on the accompanying "plan of a part of the Chaudiere river," the river was discharging 1,365 cubic feet per second, or 5,118,750 foot pounds per minute, or the equivalent of 155.1 h. p.

Mr. Ashe further says: "Ninety-four (94) feet of head could be obtained between the point marked "high water level" and the crest of the falls, and it is this head that I should recommend the use of, when the fullest power is required of the falls. With this head and the flow we have determined, we should obtain 14,610 gross horse power, and, assuming the effective horse power as being 65 per cent. of this (really 10 per cent. less than we should get from a properly constructed turbine), this head would give us 9,497 effective horse power; and, as we have decided to only count on half these amounts, the greatest horse power that these falls can be certainly depended on to furnish at the lowest stage of the river would be 4,750 h. p.

The head which I should recommend on account of convenience in situation, being some 350 feet nearer the falls than in the last case, would be at the point "C" (see plan of Chaudiere Falls). Here we should obtain a head of 79 feet, and the powers which we should obtain would be as follows: 12,253 gross, or 7,064 effective horse power. So that, assuming half this amount as being absolutely safe to count upon for the lowest possible stage of the river, we should obtain 3,980 effective horse power."

There is a natural trench through which the conducting pipe could be laid from the level of the top of the falls to the point "C," and at the lower point where the "lower head" with the intake to the conducting pipe would be made the river bed between the island and main land is only about 100 feet wide, and could be easily dammed, having an outcrop of limestone which would form an excellent foundation, while the overflow would discharge immediately into the falls without further expense.

Concluding his report, Mr. Ashe states that the Chaudiere Falls as a power is superior in every sense to that of the Falls of Montmorency. Grcat as is the total available head of the Montmorency river, this is more than compensated by the greater volume of water passing through the Chaudiere, not at any particular time, but at the lowest stages of either river.

The latest turbines being guaranteed to reproduce 80 per cent. of the gross horse power, and taking the gross horse power as calculated by Mr. Ashe as 12,253 at 79 feet head, we find the actual effective horse power to be 9,802; and taking one-half of this as he does for the lower possible stages of the river, we get 4,901 effective h. p. This valuable water power is now owned by Mr. M. Price, of Quebec, and is in the market for sale.

CHAUDIERE FALLS—LOOKING SOUTH.

## FREEING PULP-WOOD OF KNOTS.

A machine has been patented for taking the knots and foreign substances out of wood for sulphite pulp, says The Tradesman, of Chattanooga. The freer the wood is from knots and foreign matter the whiter and better quality of pulp it makes. The old method was to bore the knots out by a hand augur, but many of the knots ran cross-wise, and could be only partially removed. Hand picking of the knots was also resorted to after the wood had been chipped, girls and women being mostly employed for that purpose. Very few mills in America could afford the enormous expense of hand picking, but in Europe, where women and girls can be employed for a few cents a day, this laborious work was adopted. In consequence the European manufacturers have been able to furnish American markets with a much cleaner and better grade of pulp than is manufactured in this country. But the new machine will clean the chips better than 100 women and girls can do it in the same time. The method is simple and costs little. The wood is prepared in the usual manner by passing the blocks through the chipper. The chips are then taken up by a blower and discharged against a steel plate, which disintegrates them, after which they are passed through the machine which cleans out the knots. This is a tank or vat filled with water. After entering the water the chips are submerged by machinery and taken to a carrier. The clean wood chips suitable for pulp float and are taken out, while the knots and resinous matter sink and are carried off from the bottom of the tank. The claim of the patent is for an improved method of simultaneously moistening and assorting the clear wood chips for cooking in the digester.

## PULP-WOOD FOR FRANCE.

MR. George Wagner, of Paris, has just arrived in Montreal to make arrangements for the cutting of pulp-wood for export to France. He represents several large paper manufacturers, among them being those who supply the paper for the

Figaro and Petit Journal. Mr. Wagner's plan is to give contracts for the supply of one cargo of pulp wood as an experiment. France is a large importer of pulp wood, its supply coming mainly from Norway and Sweden. Mr. Wagner believes that Canada could compete for this trade. From what he has seen so far he expresses the opinion that the Canadian paper mills are far behind the times.

## PULP NOTES.

The Acadia Pulp Company intend erecting a second mill at Milton, N. S.

It is rumored that Mr. H. H. Cook will erect a pulp mill at Parry Sound, Ont.

The Acadia Pulp and Paper Mills Co. are putting another three pocket grinder in their New Germany pulp mill. It is being built by the Robb Engineering Co., of Amherst, N. S.

The Masterman pulp mill at Chatham, N. B., will in future be known as the Dominion Pulp Company's Works. The new manager, Mr. H. W. Nagon, has arrived from England. Additional plant will be added this summer.

Letters-patent of Quebec have been issued incorporating Joseph Dominique Guay, Louis Guay, and others, of Chicoutimi, and Frilez Schilde, manufacturer, of Carthage, New York, to make and sell pulp and paper, under the name of "The Chicoutimi Pulp Company," with a capital stock of $50,000.

The Laurentide Pulp Company will, it is said, erect at Grand Mere, Quebec, a large paper mill and an additional pulp mill. It is expected that the mills will be completed by the end of the year, and that an expenditure of one million dollars will be required for the purpose. The funds are being furnished by Montreal and United States capitalists.

In Germany wood pulp is being used with some success for making flooring, wainscotting, etc. The pulp is dried and desiccated into a dry powder, which is put up into convenient sized packages and sold to builders and consumers generally. This powder is all ready to mix with water like ordinary cement, and is spread over the surface intended to be covered. It dries quickly, adheres closely to the surface and may be tinted any color desired. It is in a certain measure fire proof, and can, it is said, be smoothed with a plane like ordinary wood.

It is stated that the annual consumption of lumber in South Africa is 500,000,000 feet. Nearly all the sash, doors and blinds used in that country come from Sweden.

The present is an active season for the saw mills at Lindsay, Ont. The Rathbun Company are employing 70 hands; S. G. Parkin, 40; J. Carew, 45; the Sadler, Dundas & Flavelle Co., 20; and Burke Bros., manufacturers of barrel heads and staves, 20 hands.

## UNITED STATES FORESRRY.

THE United States are awakening to the necessity of an intelligent supervision of what is left of their forests. Some time ago at the request of the Secretary of the Interior, a committee of the National Academy of Science was appointed to investigate forest conditions in the States and elsewhere. The committee recently sent in its report.

The report goes into details of the European experiments and plans to preserve the forests. After describing these, it gives facts regarding the damage caused by the indiscriminate clearing away of the woods. Millions of dollars have been expended during recent years in Europe in checking the force of floods due to denuded mountain slopes by the construction of stone dams and river beds, and planting sod and trees. The committee predicts that similar expenditures in the United States must follow the destruction of mountain forests if the narrow valleys of the west are to continue habitable. Fire and pasturage are cited as chiefly threatening the reserved forest lands of the public domain, damage by illegal timber cutting being comparatively insignificant.

The United States have a number of great natural parks and forest reserves, and the report of the committee urges a special forest bureau to watch these, the bureau to be under a director who is to be president of an advisory board, consisting of himself, an assistant director and four forest inspectors, a disbursing officer, clerks and legal advisors; twenty-six head foresters, twenty-six assistants, to constitute a permanent corps; two hundred rangers and various assistant rangers, the salary roll calling for an annual appropriation of $250,000, with appointive preferences given to West Point graduates.

Readers of THE LUMBERMAN are reminded that correspondence is invited upon all subjects of interest to the lumber trade. A free discussion of current topics will always be given.

The Lake Megantic Pulp Company is building a new mill on the site of the one burned last January at Lake Megantic, Quebec.

The Grand Falls Water Power and Boom Company propose erecting a large pulp mill at Grand Falls, St. John, N. B. Mr. James Manchester, of St. John, is a member of the Company.

The beginning of a new volume of the Review of Reviews is signalized by an expansion of the name of that very successful and widely-read periodical. It has now become the American Monthly Review of Reviews, with particular emphasis on the first two words. It seems likely enough that the public will speedily fall into the way of calling this magazine the American Monthly, for short. It is announced, however, by the editor, that the full and formal title will retain the words Review of Reviews.

## MONEY IN MAPLE.

A WRITER in the Canadian Bookseller says: "In Canada we have the best hard maple in the world. The farmer in many districts spends part of his winter cutting it and selling it for firewood. He is quite happy if he realizes $1 to $3, or perhaps $4, a cord. This is a sad waste of one of our greatest natural treasures. Much of it can be more profitably used in other ways. In the manufacture of wall paper, an industry constantly growing here and abroad, hundreds of thousands of rollers are used for printing the various patterns. These rollers are made of the very best hard maple, the very kind that Canada produces better than any other country in the world. In the rough they are 19½ to 23½ inches long. The end is 5 or 6 inches square, according to the size of roller required. Only the most perfect wood can be used. It is cut into these sizes. The ends are painted to prevent the wood drying faster with the grain than across it. It is then allowed to stand for three or four years. By this time it is thoroughly seasoned. This is all the labor put upon it. Good maple in this form, after being properly seasoned, brings 50 cents to 75 cents per rough block. A considerable quantity of maple blocks are similarly treated each year for use in mangles. These must be of first-class wood, but are not necessarily as perfect as the wall paper rollers."

Auction Sale
OF
# Timber Berths

DEPARTMENT OF CROWN LANDS,
(Woods and Forests Branch.)
Toronto, June 2nd, 1897.

NOTICE is hereby given that under authority of Orders in Council Timber Berths as hereunder mentioned in the NIPISSING, ALGOMA and RAINY RIVER DISTRICTS, viz., the Townships of Rathbun, Kelly, Davis, the north half of Scadding, and that part of Hanmer south of the Vermillion River, all in the District of Nipissing; the Township of Coffin additional, and certain small areas on the Spanish and Biscotasing waters, in the District of Algoma; and berths 36 and 37 sale of 1892, D 3, D 4, D 5, D 6, on Manitou Lake, and certain small scattered areas in the District of Rainy River, will be offered for Sale by Public Auction at the Depar ment of Crown Lands, Toronto, at the hour of ONE o'clock p. m. on WEDNESDAY, THE EIGHTEENTH DAY OF AUGUST NEXT.

Sheets containing conditions and terms of Sale, with information as to Areas, Lots and Concessions comprised in each Berth, will be furnished on application, personally or by letter, to the Department of Crown Lands or to the Crown Timber offices at Ottawa and Rat Portage.

J. M. GIBSON,
Commissioner of Crown Lands.

N. B.—No unauthorized publication of this advertisement will be paid for.

### FORESTRY IN SWEDEN.

The crown forests of Sweden comprise more than one-quarter of the entire wooded area of the country, and are managed with scrupulous care. The increase alone is cut, so that a productive forest is to stand forever on all crown lands that are unsuitable for cultivation. More than this, the government has entered upon an extensive system of planting trees on desolate and uncultivated areas, and these object lessons have induced owners of private forests, especially the larger proprietors, to manage their timber lands so that they will become permanent sources of income. Since the forests in Sweden grow slowly, it has generally been supposed that the immense qnantities exported would gradually exhaust this most important source of the nation's wealth, but from the facts stated it appears probable that the forty-seven million acres of forests in the country will continue to be a source of income for all future time. The products of the forest now comprise nearly one-half of the total exports of the country in value.

A new industry is to be started at Saginaw by which the saw-dust from the lumber mills, which has always been a burden on mill owners because of the difficulty of getting rid of it, will be utilized. The saw-dust will be mixed with resin and pressed into blocks, and, it is said, makes the best fuel ever known for a quick and hot fire.

## AN IMPORTANT DECISION.

A CASE of considerable interest to lumbermen, especially saw mill men, was tried in the Saginaw, Mich., circuit court recently. It was that of Edward Germain vs. the Central Lumber Company, in which 800,000 feet of lumber was in dispute.

On April 23, 1896, Germain purchased 1,640,000 feet of lumber from J. W. Howry & Sons. The lumber was on the docks of the Central Lumber Company, which company is composed of Aaron T. Bliss, A. J. Cook and A. J. Linton. Mr. Germain stated that Mr. Linton showed him the lumber belonging to J. W. Howry & Sons and that he also pointed it out to A. E. Wilson & Co., who by the contract with J. W. Howry & Sons were to inspect it. Prior to July 17, 1896, Germain had shipped about one-half of the lumber. About this time J. W. Howry & Sons suspended payment, and the Central Lumber Company refused to allow the balance of the lumber to be moved, claiming they had a lien on it. The lumber was then replevined by Germain. This suit was brought to determine his rights to it.

In opening the case the attorney for the Central Lumber Company, Hon. Benton Hanchett, stated that "the Central Lumber Company had a contract with J. W. Howry & Sons by which it sawed about 7,000,000 feet of lumber for the Howrys; by the terms of the contract the saw bill was made a lien on the lumber. The Central had also given notes for the accommodation of J. W. Howry & Sons, and to secure their payment, a lien had been given on the lumber. By law the charge for sawing the lumber was a lien on the lumber so long as it remained in the possession of the company. The saw bill had not been paid in full. The notes had been given for part of it; that these notes were not payment, but merely promises to pay. The claim of the Central Lumber Company against the lumber is about $9,000. When Mr. Germain purchased the lumber from J. W. Howry & Sons he only secured the rights J. W. Howry & Sons had in it; they could not sell other rights. Germain stepped into their place and the relations that he bore to the Central Lumber Company were the same as those sustained by J. W. Howry & Sons. Mr. Germain knew that the Central Lumber Company sawed the lumber, and it was his duty to know whether the saw bill had been paid. J. W. Howry & Sons were the owners of the lumber—that is, the title was in them—and it was perfectly natural that the lumber should be designated by the Central Lumber Company as the J. W. Howry & Sons' lumber. This did not waive the lien the law gave them on the lumber for their saw bill.

Verdict in the circuit court for Germain. The case will be appealed by the Central Lumber Company to the supreme court.

CHATHAM, ONT., June 19th, 1896.

JAS. S. PARMENTER, Flushing, N. Y.

DEAR SIR: We take very great pleasure in being able to say from nearly one year's use of your Patent Dry Kiln, we find it away ahead of anything we ever yet tried for thoroughly drying lumber without injuring it in the least. So far we have found exhaust steam alone sufficient for our purpose, so that it absolutely costs us nothing to run it. We thoroughly dry white oak, rock elm, balm and other hardwood lumber in less time than we ever did with a blast kiln, and especially find it a splendid kiln for drying white oak hubs It does its work so naturally that neither hubs nor lumber are injured by it.

CHATHAM MFG. CO., LTD.

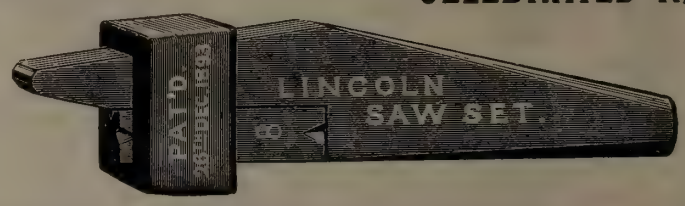
CELEBRATED NICKEL-STEEL CROSSCUT SAWS

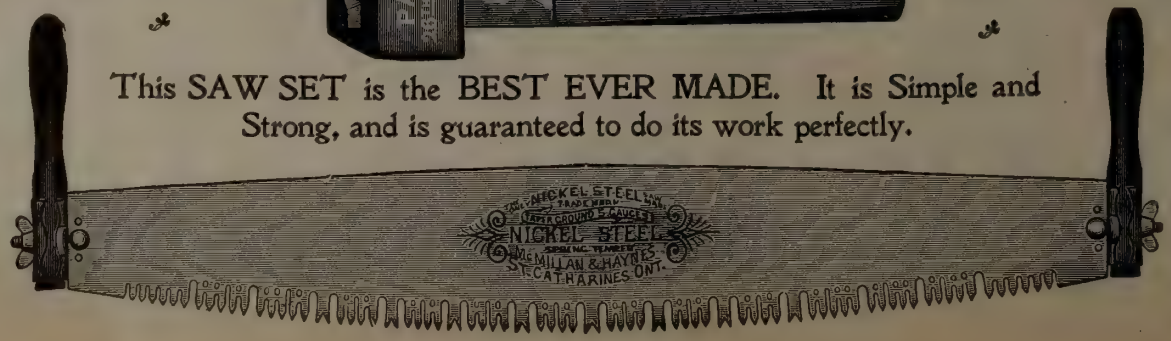
We lead all others in High-Grade Crosscuts and Saw Tools. A cheap, thick, clumsy saw is dear at any price.

The price of a good saw is soon saved in the extra work it will do.

Be sure you use McMILLAN & HAYNES SAWS; they are all warranted to give entire satisfaction.



This SAW SET is the BEST EVER MADE. It is Simple and Strong, and is guaranteed to do its work perfectly.



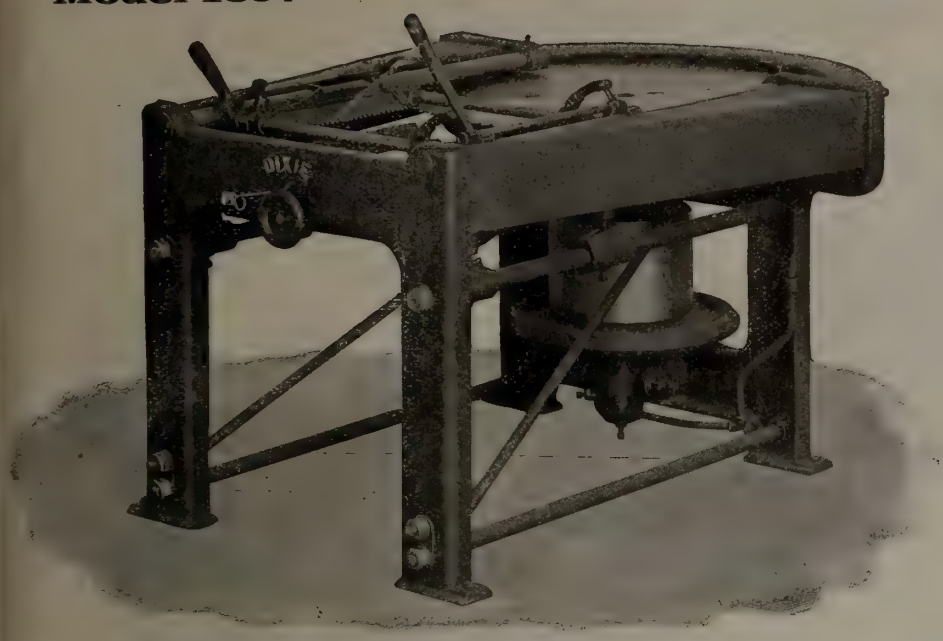
We also manufacture Axes, Files, Saw Jointers, Cant Hooks, Steel and Brass Bedsteads. We have a cheap bed with wire mattrass attached suitable for shanties.

We handle the Famous KELLY AMERICAN AXES. Their Flint Edge is guaranteed to stand in cold, frosty weather, better than any other axe made.

# Dixie Hand-Feed Shingle and Box Board Machine

(Patent Applied For)

**Model 1897**



This is the latest Hand-Feed Shingle Machine, possessing all the improvements in the way of Simplicity, Durability, and Quick and Accurate Adjustment.

The frame is made of two heavy castings, with 2 in. flange all around, and bolted by means of six horizontal and two diagonal rods, fitting in reamed holes, making an absolutely rigid frame; front casting is entirely open at the bottom, so that operator can stand close to machine.

The saw arbor is 2 7/16 in. diameter, and runs in two self-adjusting, self-oiling boxes, which line themselves in every direction, insuring cool journals. The lower end of arbor is case-hardened and runs on a hard steel step, which can be adjusted vertically by a set screw.

The first and every other cut with this machine is a shingle. Turn your slabs and cull lumber into shingles and box boards with

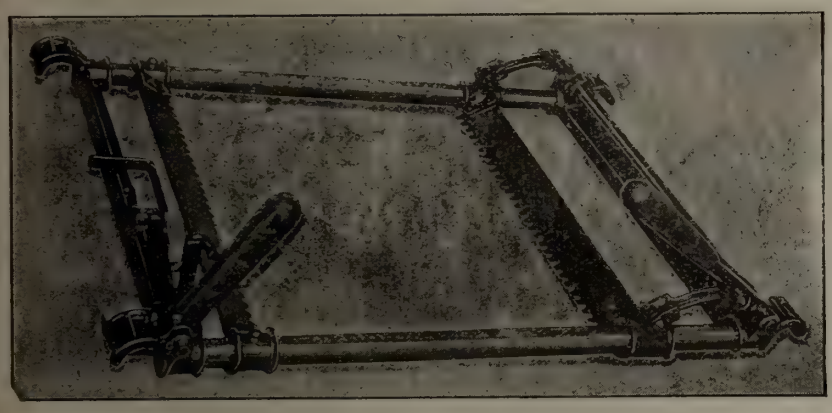
Waterous, Brantford, Canada

## The Most Desirable Hand-Feed Shingle Machine Ever Offered

# The Dixie 20 lb. Carriage



The Waterous Engine Works Co., Limited, Brantford, Canada

The carriage frame is made of steel castings and bicycle tubing, with tool steel dogs having knife edge teeth. Carriage has three babbitted bearings on each side, so arranged that it cannot possibly bind or raise from slide when saw starts cutting. Provision is made for carrying sufficient oil to keep the bearings well lubricated. We have thus obtained the strongest carriage ever built, and weighing but 20 pounds. The tilt is entirely automatic, but can be stopped by a simple movement of left-hand handle, which raises the tilt pawl, enabling the operator to cut as many butts from one end as desired. The angle of tilt, or thickness at butt or end of shingle, can be changed by the adjustment of four set screws. The table of tilt, which regulates entire thickness, can be raised and lowered by turning hand wheel in front of machine, which gives a vertical adjustment of three-quarters of an inch. This is the only machine ever built that has a one-screw adjustment for changing tilt.

All parts requiring adjustment can be reached by operator while standing in working position.

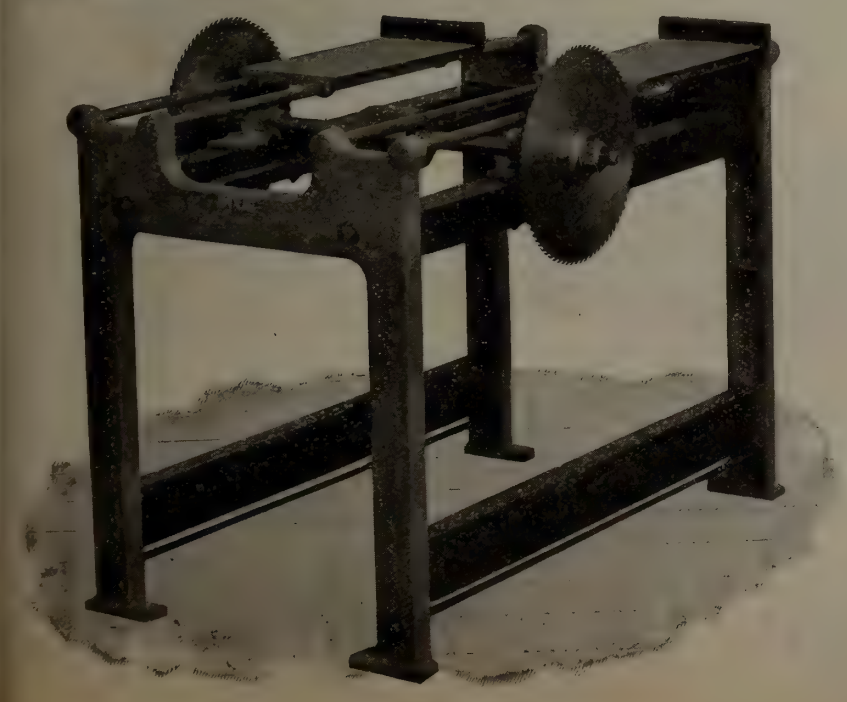
Size of pulley, 12 in. diameter and 8 in. face, and should run at 1500 to 1600 revolutions per minute.

As a **BOX BOARD MACHINE,** the Single Screw Adjustment for varying thickness makes this machine superior for this class of work.

No. 1 Machine, with 36 in. Saw and Collar; No. 2 Machine, with 38 in. Saw and Collar; No. 3 Shingle and Box Board Machine, with 40 in. Saw and Collar; No. 4 Shingle and Box Board Machine, taking Bolts 24¼ in. long, with 42 in. Saw and Collar; No. 5 Shingle and Box Board Machine, taking Bolts 24¼ in. long, with 44 in. Saw and Collar.

Waterous, Brantford, Canada

# Dixie Knot Saw



The frame consists of two iron ends, connection by means of two pieces each of 1¾ x 4 and 2½ x 2½ hardwood, and four iron rod braces, making it very rigid.

Mandrel is 1 3/16 in. diameter, with two saw collars, and driven by 4 in. diameter, 4 in. face pulley. The saws are 14 in. diameter and 21 inches apart, giving ample room for operating two carriages.

Carriages are 8 inches wide, 18 inches long, and have 18½ inches travel on the standard machine. We will furnish these machines to cut any length shingle, with plain or dimension carriage, without extra cost.

## St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

# Simonds' Process

in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N. B., Nov. 17th, 1894.

R. H. SMITH CO., Ltd., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., Ltd., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P. S.—I am sending you my old saw to be repaired; please hammer to same speed as new one.

## SAW MILL OF MR. HUGH BLACK.

THE mill which is shown in the accompanying illustration was erected at Fergus, Ont., in the year 1886 by Mr. H. Black, just one year after he commenced business in that town. It is located on the Grand river, which affords splendid facilities for floating logs. The mill is fitted with the usual saw mill machinery and improved shingle machines, a special feature being the arrangement of the machinery to facilitate work with a minimum amount of handling of material. All sawdust and shavings are conveyed direct to boiler room by chutes. Power is provided by a 65 h. p. engine and boiler.

There are commodious yards and sheds in connection with the mill which are well stocked with lumber.

Mr. Black states that this season's drive of logs has been very satisfactory both in quantity and quality.

He gives a keen personal supervision to all details of the work, and this has greatly assisted in building up his business.

SAW MILL OF MR. HUGH BLACK, FERGUS, ONT.

## CARE AND ERECTION OF SHAFTING.

A FEW simple rules for the erection and maintenance of line shafting may be interesting to manufacturers who are looking for strict economy and the best results obtainable in this department. In erecting new shafting, says G. P. Clapp in the Canadian Engineer, adjustable hangers should be selected strong enough to do the work required without springing. The width of bearings should be three times the diameter of the shafting. Where a number of pulleys and belts are used bearings should ordinarily be ten, eleven and twelve feet between centres, for 2, 2½ or 3 inch shafting.

When large driving belts, from six to twelve inches wide, are to be used, a strong bearing should be placed on each side of the pulley. A neglect to provide for this important item will result in springing the shaft and causing it to heat in the bearings, besides the liability of breaking from the constant vibration and eccentric motion, which always occurs when shafting is sprung out of line by stress of tight and heavy belting. Shafting should not be fully lined up until all machinery on upper floors is in position. When hangers are attached to floor timbers or ceiling, and the floors are then loaded down with machinery or material, the shafting will always be found badly out of line from the effects of springy floor and timbers. By all means avoid making a storehouse of buildings where line shafting is extensively used.

When convenient, shafting should be hung on posts having a good foundation in the ground cellar and running directly through the various floors; by this plan the floors may be sprung by varying loads and still the shafting will not be affected. Tallow or grease of any kind should never be used on bearings unless it comes in direct contact with the shafting. Piling grease on the box of a vertical shaft, stuffing it in the oil holes, or in the recess around the oil holes, in the caps of horizontal shafting, is a delusion and a snare. Only the grease that comes in direct contact with the shaft will melt and bearings become so hot that damage is done. The person whose duty it is to look after the shafting will usually depend upon the grease doing the work that he should do with his oil can. Where the writer is employed no one is allowed to use grease as cited above, without risking his position. More damage has been done to shafting and bearings by this practice than by any other known.

The size of shafting in its relation to its liability of heating and springing is one of great importance. Shafting too small for the work required leads to bad results, not simply from the width of bearings and size of shaft. Insufficient bearings, with a heavy tension on belting, causes the shaft to spring, and this brings the greater part of the strain on the edge of the bearings nearest the tight belt, consequently heating and cutting is the result. Writers on this subject often overlook the fact that there are other causes for hot bearings besides narrow boxes and small shafting. The fact is, bearings are not likely to heat providing oil can be kept between the two metals composing the shafting and bearings. With small shafting and tight belts, so much strain in proportion to the size of the shaft is brought to bear upon the bearings that the pressure makes an oil-tight joint, and the oil failing to penetrate between the two metals, heating is the result. If any good lubricant could be kept between the metals, heating would be almost an impossibility, but when the pressure becomes so great that the lubricant is excluded by an oil-tight joint then the troub-e begins. The best and most economical results are obtained by running the main or driving shaft, at as high a rate of speed as is consistent with safety. Experience teaches the fact that the source of power, such as engines and water-wheels, should be driven at the highest convenient speed. The following memo. for the proper size of shafting to transmit a given h.p. at varying speeds may be interesting to some of your numerous readers. Size of shaft 1 15/16 in.:

| Speed of shafting | 100 | 125 | 150 | 175 | 200 | 225 | 250 |
|---|---|---|---|---|---|---|---|
| H. P. developed | 10½ | 13 | 16 | 19 | 21 | 24 | 26 |

## ONTARIO FORESTRY COMMISSION.

MEMBERS of the Forestry Commission have recently returned from their initial trip, having visited the townships of Harvey, Burleigh and Galway, in the rear of the County of Peterboro'. The party consisted of Mr. M. J. Butler, representing Mr. E. W. Rathbun; Mr. Thos. Southworth, Clerk of Forestry; Mr. John Bertram, Toronto, and Mr. J. B. McWilliams, of Peterboro'.

Mr. Southworth reports that they found far better prospects for a second crop of pine than they expected. In one block of about 10,000 acres, which is quite unsuitable for cultivation, they found at least 250 pine trees to the acre. This land was originally free grant land and was burned over 23 years ago. Following the fire came a thick growth of poplar, and in the course of a year or so more the young pine began to appear. The poplars served as a shade for the pines until the pines outgrew them; now they are from 30 to 40 feet high and will average not less than eight inches in diameter. In addition to the pines there are now quite a number of fine young hardwood trees to the acre, and providing this block can be preserved from fire for another 25 years it will be a very valuable timber berth.

The next visit of inspection will be made to the Georgian Bay district.

W. Richardson & Co. Elora, state that their cut this season will be ahead of the two previous years.

An American company has bought out a match factory in Japan, introducing modern machinery, and has begun operations on a large scale. It employs child labor at 12 cents a day. The company claims to be able to drive out all competition.

## TWO DOLLAR DUTY ON LUMBER.

THE CONGRESS OF THE UNITED STATES FINALLY ADOPTS THE DINGLEY BILL.—A COMPARISON WITH THE MCKINLEY BILL.

At four minutes past four o'clock on Saturday, July 24th, President McKinley affixed his signature to the Dingley tariff bill, and exactly at that moment it became law. The excitement at the customs houses at the time is said to have been intense, and at many ports vessels heavily laden with goods arrived only a few minutes after the bill had become law.

The wood schedule, as adopted, is much the same as that of the McKinley bill, which was operative between October, 1890, and August, 1894, and was subsequently succeeded by the Wilson bill, placing lumber on the free list. A couple of weeks ago an amendment was passed in the Senate reducing the duty on white pine to $1 per thousand feet, and many were of the opinion that the bill would become law in that form, but a conference committee of the two houses afterwards restored the $2 duty, which was finally adopted. The Michigan lumbermen interested in securing Canadian timber made a strong fight against the duty, apparently fully convinced of the results likely to follow. The retaliatory clause adopted provides that in case any country imposes an export duty on saw logs, the amount of such duty shall be added to the import duty on lumber.

For the purpose of comparison, we print below the bill as adopted, together with the McKinley bill passed in 1890 :

DINGLEY BILL—ADOPTED JULY 24TH, 1897.

WOOD SCHEDULE.

Timber, hewn, sided or squared (not less than eight inches square) and round timber used for spars or in building wharves, 1 cent per cubic foot.

Sawed boards, planks, deals and other lumber of white wood, sycamore or basswood, $1 per thousand feet board measure; sawed lumber, not specially provided for in this act, $2 per thousand feet board measure; but when lumber of any sort is planed or finished, in addition to the rates herein provided, there shall be levied and paid for each side so planed and finished, 50 cents per thousand feet board measure; and if planed on one side and tongued and grooved, $1 per thousand feet board measure; and if planed on two sides, and tongued and grooved, $1.50 per thousand feet board measure; and in estimating board measure in this schedule no deduction shall be made on board measure on account of planing, tonguing and grooving; provided that if any country or dependency shall impose an export duty on saw logs, round unmanufactured timber, stave bolts, shingle bolts, or heading bolts, exported to the United States, or a discriminating charge on boom-sticks or chains used by American citizens in towing logs, the amount of such export duty, tax, or other charge, as the case may be, shall be added as an additional duty to the duties imposed upon the articles mentioned in this paragraph, when imported from such countries or dependencies.

Paving posts, railway ties, and telephone, trolley, electric light and telegraph poles of cedar, or other woods, 20 per cent. ad valorem.

Kindling woods in bundles not exceeding one-quarter of a cubic foot each, 3-10 of 1 cent per bundle; if in larger bundles 3-10 of 1 cent for each additional quarter of a cubic foot or fractional part thereof.

Sawed boards, planks, deals and all forms of sawed cedar, lignum vitæ, lancewood, ebony, granadilla, mahogany, rosewood, satin wood and all other cabinet woods not further manufactured than sawed, 15 per centum ad valorem; veneers of wood and wood unmanufactured not specially provided for in this act, 20 per cent. ad valorem.

Clapboards $1.50 per thousand.

Hubs for wheels, posts, heading bolts, stave bolts, last blocks, wagon blocks, oar blocks, heading blocks and all light blocks or sticks, rough, hewn, sawed or bored 26 per cent. ad valorem; fence posts 10 per cent. ad valorem.

Lath, 15 cents per 100 pieces.

Pickets, palings and staves of all kinds, 10 per cent. ad valorem.

Shingles, 30 cents per thousand.

Casks, barrels and hogsheads (empty), sugar box shooks, packing boxes (empty) and packing box shooks of wood, not specially provided for in this act, 30 per cent. ad valorem.

Chair cane or reeds, rough or manufactured from rattan or reeds, 10 per cent. ad valorem; ozier or willow prepared for basket makers' use, 20 per cent. ad valorem; manufactures of ozier or willow, 50 per cent. ad valorem.

Tooth picks of wood or other vegetable substance, 2 cents per thousand and 15 per cent. ad valorem; butcher's and packers' skewers of wood, 40 cents per thousand.

House or cabinet furniture of wood, wholly or partly finished, and manufactures of wood, or of which wood is the component material of chief value, not especially provided for in this act, 35 per cent. ad valorem.

MCKINLEY BILL—ADOPTED OCTOBER 1, 1890.

WOOD SCHEDULE.

Timber, hewn and sawed, and timber used for spars and in building wharves, ten per centum ad valorem.

Timber, squared or sided, not specially provided for in this act, one-half of one cent per cubic foot.

Sawed boards, planks, deals and other lumber of hemlock, whitewood, sycamore, white pine and basswood, one dollar per thousand feet board measure; sawed lumber, not specially provided for in this act, two dollars per thousand feet board measure; but when lumber of any sort is planed or finished, in addition to the rates herein provided, there shall be levied and paid for each side so planed or finished fifty cents per thousand feet board measure; and if planed on one side and tongued and groove', one dollar per thousand feet board measure; and if planed on two sides, and tongued and grooved, one dollar and fifty cents per thousand feet board measure; and in estimating board measure under this schedule no deduction shall be made on board measure on account of planing, tonguing and grooving; provided, that in case any foreign country shall impose an export duty upon pine, spruce, elm or other logs, or upon stave bolts, shingle wood or heading blocks exported to the United States from such country, then the duty upon the sawed lumber herein provided for, when imported from such country, shall remain the same as fixed by the law in force prior to the passage of this act.

Cedar: That on and after March first, eighteen hundred and ninety-one, paving posts, railroad ties and telephone and telegraph poles of cedar shall be dutiable at twenty per centum ad valorem.

Sawed boards, planks, deals and all forms of sawed cedar, lignum vitæ, lancewood, ebony, box, granadilla, mahogany, rosewood, satinwood, and all other cabinet woods not further manufactured than sawed, 15 per centum ad valorem; veneers of wood and wood unmanufactured, not specially provided for in this act, twenty per centum ad valorem.

Pine clapboards, one dollar per one thousand.

Spruce clapboards, one dollar and fifty cents per one thousand.

Hubs for wheels, post, last blocks, wagon blocks, oar blocks, gun blocks, heading blocks, and all like blocks or sticks, rough, hewn or sawed only, twenty per centnm ad valorem.

Laths, fifteen cents per one thousand pieces.

Pickets and palings, ten per centum ad valorem.

White pine shingles, twenty cents per one thousand; all other thirty cents per one thousand.

Staves of wood of all kinds, ten per centum ad valorem.

Casks and barrels (empty), sugar box shooks, and packing and packing box shooks, of wood, not specially provided for in this act, thirty per centum ad valorem.

Chair canes, or reeds wrought or manufactured from rattans or reeds, and whether round, square, or in any other shape, ten per centum ad valorem.

House or cabinet furniture, of wood, wholly or partly finished manufactures of wood, or of which wood is the component material of chief value, not specially provided for in this act, thirty-five per centum ad valorem.

Mechanically ground wood pulp, two dollars and fifty cents per ton dry weight; chemical wood pulp, unbleached, six dollars per ton dry weight; bleached, seven dollars per ton dry weight.

## ONTARIO CROWN TIMBER AGENTS.

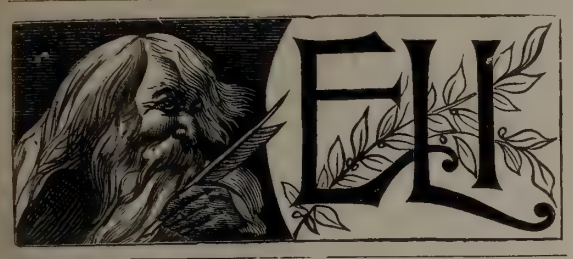
The accompanying portrait and particulars of Mr. P. C. Campbell, Crown Timber Agent for Algoma, came to hand after our July issue had been printed :

Mr. Campbell was born in Aldborough, County of Elgin, on December 2nd, 1833, his parents being among the pioneer settlers of that township, having emigrated from Argyleshire in 1818. He, with the rest of the family, experienced and went through all the vicissitudes and hardships incidental to a pioneer life at that time, when the only roads were blazed paths and there were no mills, no churches, no schools. His education was such as could be obtained at home, with occasionally a few weeks at a school which his father and two neighbors maintained at their own expense. Higher education was out of the question, as it could not be obtained nearer than Little York, and neither the time nor the money could be spared for that purpose. Though largely self-educated, he has filled many positions of trust and importance in the community in which he has lived.

From 1853 to 1860 Mr. Campbell's time was divided between farming and lumbering. From 1860 to 1868 he was engaged in lumbering in conjunction with Mr. George Campbell, of Windsor. From 1868 to 1872 inclusive he was employed as overseer of colonization road building in Muskoka and Parry Sound, being for the last three years acting inspector, and during the winters of these years engaged in wood ranging. Resigning his employment under the Crown Lands Department in 1872, he again engaged in lumbering, meeting with heavy disaster in 1873, in common with all engaged in the lumbering business that year. In 1876 he opened a conveyancing, loan and insurance office in Wardsville, in the county of Middlesex, combining with it next year the purchase and shipping of all kinds of produce, and from 1878 to 1881 he also managed a private bank in the same village for Fawcett & Livingstone, of Mitchell, Ont. Towards the close of the latter year he went to Winnipeg, along with many others, and was one of the victims of the collapse of the boom of 1881 and 1882.

MR. P. C. CAMPBELL.

Mr. Campbell has always been a pronounced Liberal, and has taken an active part in political life, having been repeatedly urged to become a candidate in different ridings where he has been in business, but he has never been ambitious in that direction. He was elected Reeve of his native township in 1867 by a large majority. He was at the front with the volunteers as ensign of the Wardsville Infantry Company in 1865-6, being stationed at Sarnia during the Fenian Raid. In 1883 he was offered the position of Crown Timber Agent for the district of Algoma, which he accepted and still occupies.



I NOTICE that the methods of a new firm of wholesale lumber dealers have lately been attracting much attention in the Boston market. Coming into existence without any known previous connection, they posed as lumber dealers and sent out circulars stating that they were in the market for quarter and plain sawed white oak, and that they could also use some good white ash. The first shipper to open up correspondence was an Indiana manufacturer, from whom the new firm ordered one car of quartered and two cars of plain oak. Before shipping, however, he wrote as follows: "Not finding you rated, will attach 30 days' sight draft to bill of lading." To this the dealer replied, "Reason we are not quoted, did not commence business till after first of year. All right, ship lumber, attach draft." The lumber was shipped, and the bill of lading forwarded to a Boston bank, with draft attached. The papers were to be delivered only on payment of the draft, but disregarding this admonition, the bank turned over the bill of lading upon acceptance of the draft, and it is understood that the shipper hopes to hold the bank liable. The lumber being secured by the dealers, it was disposed of in the Boston market at from five to six dollars less than they had agreed to pay the shipper. These conditions leave no doubt in the minds of the public how the new aspirants for patronage proposed to transact their business, and emphasize the necessity of shippers of lumber taking every possible precaution to escape the clutches of such sharks, who are also a source of injury and annoyance to reputable wholesale dealers.

* * *

How the proposed duty on Canadian lumber will affect the lumber trade of this country is shown by the statement made by a Toronto wholesale dealer that he would do the buying for his American trade in the American market. This, he said, would necessitate no greater, if as great, travelling expenses than at present, and would enable him to compete with wholesalers across the border. "Of course," he remarked, "I would prefer to handle Canadian lumber, but by force of circumstances we must adapt ourselves to the new order of things." Another dealer with whom I talked, and who deals in hardwoods almost exclusively, stated that he would remove to Michigan, from which point he thought he could conduct his trade equally as well as from Toronto. He considered it a foregone conclusion that the Dominion government would impose an export tax on saw logs, in which case the duty on lumber would be $4. Thus for a time following the imposition of the duty the Canadian trade would suffer, but I confess that I cannot see any other way out of the difficulty but to put on a bold front and await results. Surely the government of this country cannot be condemned for taking action to protect her rights when practically compelled to do so by the infamous tariff law of the United States. It may seem a hardship to some, but in law individual interests cannot be considered, and as a nation no other course now seems open. Should the export be added to the import duty, we must accept the situation, and take early steps to learn the possibilities of the export trade.

* * *

THE name of Mr. Arthur Hill, of Saginaw, Mich., has been prominently before the public of late in connection with the question of a duty on lumber. As a large holder of Canadian limits, he has been a strong opponent of the duty, and his labors have probably carried more weight at Washington than those of any other individual person. The portrait which herewith appears shows that Mr. Hill is yet in the prime of life, and quite good-looking. It will, I am sure, be very acceptably received by readers of THE LUMBERMAN, and especially by those who have interests

MR. ARTHUR HILL.

in common with Mr. Hill, but who have not yet had the pleasure of meeting him personally. Although residing on the American side, his interests are almost entirely in Canada. During the tariff fight he has spent the greater portion of his time at the United States capitol, seeking and imparting information.

* * *

"ELI" happened to be in the office of a lumber dealer the other day when the principal was called to the telephone by a manufacturer who had been requested to quote prices on certain stock. "Oh," said the dealer, "you are too late; that order has been filled over a week ago." This suggested to me the thought that much business was lost to mill men by dilatoriness in answering correspondence. In this case the dealer wanted certain stock, and the mill man had the stock that would fill the bill, but no deal was consummated between the two parties, as a prompt reply to the letter of the dealer was not forthcoming. Saw mill men are not usually expert at office work, but as it has an important bearing upon the results of the year's business, many of them could with profit pay more attention to this detail. The system which prevails in the saw mill should to the same extent be found in the office.

## A BUSINESS HELP.

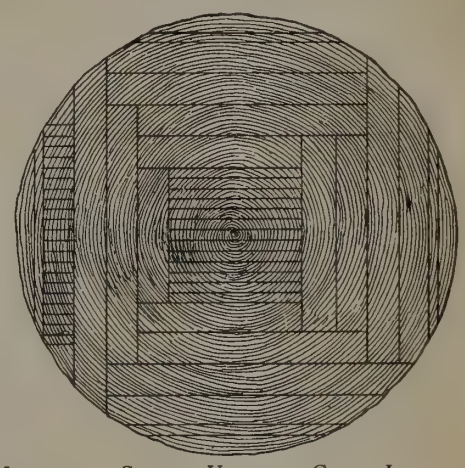
Messrs. Bowman & Co., Dundas, Ont., in renewing their subscription to THE LUMBERMAN, state that they find it very interesting and profitable reading, and that it has put them in communication with several firms with whom they now have business relations.

## SAWING VERTICAL GRAIN LUMBER.

A SUPERIOR quality of lumber may be obtained by sawing the log vertical with the grain, or growth rings of the tree, a fact that should be known, not only by sawyers, but by mill owners as well, says a writer in "Lumber." Of course, it requires the turning of the log a few more times, therefore taking a little more time, but this loss of time is more than made up by the quality of the lumber obtained, and also by the quantity of clear lumber that may be cut out of a log that has a few knots in it.

Lumber cut in this way is far superior to any other. It will not warp in drying, at least not one-half as bad as lumber sawed the other way, which alone is worth more than it costs in extra time by sawing it vertically. Most kinds of wood are liable to check in drying, a difficulty that is largely overcome in lumber sawed vertically. Another advantage is that lumber sawed in this way will retain paint much better. But the principal advantage is to be found in its superiority of warping qualities. Lumber used for flooring should not be cut any other way. It will wear more even and not splinter up as it will if cut from the side of the log in the usual way.

As to the way of cutting lumber vertically, the illustration given will convey to the reader the idea more readily than I could explain it in many times the space. But a sawyer must be governed by the size of the log he is sawing, the amount of clear lumber there is in it, and also the width of the lumber he wishes to make. He will readily see that it would not be practical to try to get ten or twelve-inch vertical lumber out of a small or medium-sized log. In fact, it does not pay to cut much wide lumber vertically, but chiefly from four to six-inch, as used for flooring and siding. My plan in sawing is, after taking off the slab, to take off one or two one-inch



METHOD OF SAWING VERTICAL GRAIN LUMBER.

boards, then take off one or two cants the thickness of the width of the boards required, then turn the log and continue cutting and turning until the log is cut into where it is too knotty for clear lumber. This part of the log can then be cut up into common lumber, the cants to be laid one on top of the other, and cut into the required thickness.

The extensive saw mills of the Royal Paper Mills Co., at East Angus, Que., were destroyed by fire during the past month, entailing a loss of $200,000, only about one-third of which is covered by insurance. The saw mill was a comparatively new building constructed two years ago at a cost of $40,000. The pulp mill was recently overhauled and was probably worth $125,000. Mr. F. B. Buck, of Sherbrooke, the president of the company, states that rebuilding will be commenced at once.

One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## CEDAR BLOCKS AS A PAVING MATERIAL.

AN agitation has been going on for some time past in many Canadian and United States cities against the use of cedar for paving purposes. In Toronto the material is being unjustly decried, and defects attributed to it for which it is not responsible. Thus we feel prompted to say a few words in defence of cedar blocks.

Some fifteen years ago Toronto, among other cities, found that the old broken stone or macadam road was not only costly to build, but also to maintain, and some other style of pavement was looked for. The Nicholson or sawn block road, made first of three-inch oak plank and then of pine, was tried, but although making a nice-looking road, it did not last as long as was expected. This was not so much the fault of the material as the neglect to properly care for it after it was laid. No sooner was a new pavement laid on a street than it would be torn up to lay gas or water mains or private drains, thus allowing water to penetrate the joints between the blocks and cause decay. The specifications also called for white oak, but strange to say, the authorities permitted over fifty per cent. of red oak to be used—a wood that is very inferior for the purpose. This material was therefore discarded.

Next the round cedar blocks were adopted, and have since been largely used for residential streets. They have, we believe, given general satisfaction, when the lower cost as compared with brick or asphalt is taken into consideration. It has been demonstrated that when properly constructed and not disturbed by excavations they will last for ten years, when they can again be relaid at a very small cost. No person would for a moment claim that cedar will make a better roadway than the materials we have just mentioned, but it certainly is better than some of the asphalt and brick laid in Toronto within the last few years, and costs only about one-quarter as much. The bricks laid on College and Dundas streets are going to pieces; the edges are chipped off, and the road will soon be as bad as a cobble stone road.

In Toronto we have a large number of cedar block pavements, to which members of the medical profession have attributed the cause of much disease which we believe was, instead, the result of bad plumbing of the "boom" days, poorly constructed sewers, or careless people. A cedar roadway will certainly never retain odors like the primitive gravel roads they are now trying to force on the people. In proof that the cedar roadway is not unhealthy stands the fact that Toronto stands second in point of health among the large cities on this continent.

There is in Ontario much cedar available for paving purposes. The paving of the streets of Toronto with cedar would mean the employment of a large number of men both in cutting the timber and sawing the blocks. The imposition by the United States government of a duty on lumber will probably lead to the shutting down of many saw mills, thus throwing a small army of men out of employment. Some of those men at least might find employment taking out cedar for paving. The pavements in Toronto must be renewed, and the question is, "What material shall be used?" Cedar has certainly given good value for the money expended, and has lasted for ten or twelve years.

We do not desire to depreciate other and more expensive pavements, but between gravel and cedar blocks there can be no doubt as to which is the best material. As being interested in wood goods, we would ask the authorities of Toronto and other cities to consider the good points of cedar, and not discard it until it can be displaced with something that is better and cheaper.

## CARE IN HANDLING STOCK.

FREQUENTLY in the columns of THE LUMBERMAN the attention of manufacturers has been drawn to the necessity of exercising care in the cutting and handling of lumber. The matter is one of great importance to manufacturers, more especially in view of the increased export trade likely to be done in the near future. From the time the log reaches the mill until the lumber is loaded on the car every precaution should be taken against damage which would depreciate the value of the stock.

In the first instance, the sawyer should bear in mind that there are good and bad sides to the log. You can make many dollars in a season by watching this.

The sawyer should use his "nigger" canter carefully. Do not jam and tear the whole face out of a clear plank just to gain a minute or two. You can spoil more clear lumber in a few seconds than you will make in many hours. Some canters jab their cant hooks into the face of a clear cut and tear large slivers out, apparently forgetting that good lumber meets with ready sale at a high price, and is much to be desired.

Tail sawyers should handle wide clear planks from the saw with care. Do not slam them down on the rollers and split them. The value of a lot of lumber often depends on the percentage of wide stock it contains. You can materially assist in keeping up the average by careful handling.

Lumber pilers should see that the foundations of their piles are level to start with, then see that they are sufficiently high off the ground to ensure proper ventilation, and then pile the lumber evenly, so that the crossers are immediately over one another. By this means the weight of the pile is evenly distributed, and there will be no warped lumber. Let the front end crosser project sufficiently so as to shade the ends of the boards or planks as much as is necessary. This will prevent checking on the ends. Pile each length by itself as far as possible. Go to a little trouble even to do this, as it will pay to do so, both in the appearance of the stock and in preventing checking, while it is much easier to ship from.

When it is necessary to pile different thicknesses of lumber in one pile, always get the thickest planks on the outside, and as many of the same thickness as possible at intervals between, so that the crossers of the next course may rest on these and make a uniform bed for the next course. Avoid, when possible, doubling up thin boards to make a uniform course except in very dry lumber. Cover your piles, especially your good thick lumber, every night. There are plenty of culls made at every mill, and they are worth very little. There is a much smaller quantity of clear, which is valuable. It is manifestly to the interest of the manufacturer to save every piece of good lumber he makes. A pile left uncovered over night means checked lumber if the sun comes out strong the next day. If it is pine, basswood, maple or oak it may mean stained lumber as well as checked, or a difference in value of from $10 to $15 per M feet. When the pile is finished, roof it carefully, so that the stock may be kept bright and allowed to dry in good order. Some mill men think that the very best lumber they have is none too good to roof their piles with, and cover the clear piles with clear lumber. This is rather expensive, as a roof of clear lumber will not keep out the rain or snow any better than good common boards.

Lumber should be carefully loaded on cars. This is usually looked after by the inspector, but sometimes it happens that the inspector is called upon to explain a discrepancy between his inspection at the shipping point and the inspection at receiving point. Some of this can often be traced to splitting, warping and careless loading. Each piece should be placed perfectly flat. If there is a space that you have not a board to exactly fill, it is a good plan to angle the piece you put into the space, so that the boards in the following course will bear on some part of the piece thus angled. In loading stock boards where they do not exactly fill the space, either alternate them and break joints or pile exactly on

top of one another and put enough pieces on edge to fill out the space.

Employers should teach their employees the necessity of careful handling and neat piling. While in this era of cheapness it may be necessary to keep the cost of handling down to the minimum, yet it is the clear, bright, carefully handled stock that brings the most money and meets with ready sale.

## A DECLARATION WANTED.

In another column will be found the wood schedule of the Dingley bill as finally passed by the United States congress. The two dollar rate on both pine and hardwoods has been maintained, while the duty on shingles and other classes of wood goods is equally protective. The result of the imposition of this duty cannot well be foreshadowed. It will not, we believe, prove to be in the best interests of the United States, which is to a large extent dependent upon Canada for raw material, and that it will cause a transformation in the Canadian trade may safely be predicted.

The lumber interests of the two countries are closely allied. The United States is looking to Canada for her supply of saw logs and pulp wood, while in the United States Canadian lumbermen find their natural market. But by means of a tariff wall, initiated by the American government, the two countries are to be separated, probably to the detriment of both. The president's signature has been affixed to the Dingley bill, and it now remains for the Dominion government to declare whether we shall meekly submit to the injustice of the bill or adopt retaliatory measures.

Whatever course may be decided upon, the lumbermen of this country are entitled to an early declaration from the Governor-General, to whom has been given the power to impose an export duty on saw logs. The time is drawing near when preparations must be made for operations in the woods, and lumbermen desire to know just where they stand. The government should therefore lose no time in making a declaration regarding the imposition of an export duty.

## EDITORIAL NOTES.

There is manufactured in Ontario each year several million feet of oak lumber, most of which is flat sawn. We would suggest for the consideration of manufacturers the advisability of quarter-sawing a greater quantity, which could be done by the addition of a little machinery, and the outlay would soon be returned by the higher prices obtained for the stock. By quarter-sawing the beauties of the grain are shown to much better advantage, and the boards are not likely to warp. Opinions differ as to the expediency of quarter-sawing, but we believe that no mistake can be made in cutting the best logs at least in this manner.

An insect, called the spruce gall louse, is said to be working its way into the spruce forests of Ontario, and unless steps are taken looking to its extinction, destructive results may follow. It is said to be a native of the old world, and was imported into the United States in 1867, since which time it has gradually been working northward. The eggs are laid about the end of July on the small green spines, and remain exposed to the weather all winter and hatch out in the spring. The annual report of the Ontario Clerk of Forestry, which will shortly be published, will contain a paper on the pest prepared by Mr. William Brodie, of Toronto, who has given the matter some attention. If taken in time, it is said to be possible to save a tree by nipping off and burning the affected twigs.

The maxim that "In Unity there is Strength," has been strikingly illustrated in connection with the question of taxing Canadian lumber. After the tariff bill had passed several stages in the United States Congress with lumber at the $2 rate, a large meeting of Canadian pine limit holders and dealers was held at Ottawa to protest against the proposed duty, and to urge the Dominion government to retaliate by means of an export duty. Influence was brought to bear on the United States government, and the rate on pine was reduced by the Senate to $1, but the reduction of the duty on hardwoods was apparently never thought of. In all the deliberations one would suppose that pine was about the only lumber in Ontario. The reason of this is found in the lack of organization in the lumber trade. The pine men have large interests involved, and are therefore given consideration, but unless the hardwood manufacturers combine their interests they cannot hope to secure justice.

In the past objections have been raised to the red cedar shingles of the Pacific coast on the ground that they were over-dried in order to lessen the cost of transportation to the eastern markets. The folly of this over-drying has gradually become recognized by the manufacturers, and to-day the western shingle is looked upon much more favorably by both dealers and consumers. Partly on this account there has sprung up in the east a demand for red cedar shingles almost unprecedented in the history of the trade, and after several years of heavy stocks manufacturers now find themselves in the somewhat enviable position of being unable to fill orders. The shipper now controls the market, a complete reversal of the conditions which have existed during the past few years. Whether prices will be advanced in the eastern markets it is difficult to say, as cypress shingles, which can be purchased at a lower cost, are also coming in favor, and may influence the market in this respect.

## REPAIRING A PORTABLE MILL.

A correspondent of the Woodworker thus relates his experience in overhauling a portable mill purchased at an administrator's sale :

"The engine was a 15 horse power center-crank. An examination disclosed the fact that there was a half-inch play in the crank, and both brasses burnt in two. The wrist was corrugated to the depth of one-fourth inch. I was informed by the engineer that when it first commenced heating it would hang up sometimes, but they would 'prize' it off the dead centre with a scantling, and go at it again. He also said the governor belt had broken once, and all hands had taken to the woods, but he had ventured back and stopped it after it had gotten down nearly to its normal speed again. He said no one could run it, and when I found the eccentric slipped back a sixth of a revolution, I was ready to believe him. The boiler was in fair condition.

"Turning my attention to the mill, I found it to be of the latest variable-feed design, and in fair order except the saw. It was an Emerson, Smith & Co., planer tooth, twenty-eight teeth, twelve of which were out, and each of the other sixteen setting on a separate and distinct angle. The sawyer, who was also an itinerant preacher, had informed the natives that the mill was no good, and the boiler was liable to 'bust' at any time. This had the effect of scaring off most of the would-be purchasers, and the mill was knocked down to me at one-third of what it had cost a year before.

"Now came the question of repairs, and as several men wanted sawing done where the mill was—and that was sixteen miles from the nearest railroad depot, and forty miles thence to a shop—I concluded to tackle the job myself. I found the wrist would dress to two and one-half inches, it being originally three ; so I ordered a pair of brasses from the makers, bored to two and one-half inches. Then I made a template of sheet iron with a two and one-half inch half circle, being careful to get it perfect. I first cut off the ridges with a cold chisel, then finished it with files, referring often to the template. I left the ends round, instead of bringing to a square corner, to guard against a crack starting, as it was considerably weaker than at first.

"The saw was easy to repair, it being necessary only to let the teeth down one-eighth of an inch in the mouthpieces, and after dressing the plate to suit it was equal to a new saw. For a wonder the tension was all right, and the saw did good work until I broke it in a frozen log.

"I suppose some of the readers of this will ask why I did not send the shaft to the shop to be turned. It would have cost time and money, and I had neither. I worked just two days on the wrist, and started up with a pair of babbitt 'brasses' for temporary use, and by recasting them several times sawed 50,000 or 60,000 feet. When the brasses came and were fitted, my troubles were ended, as it has given no trouble since.

"I sold the mill last summer for $550 more than it cost me, and thought my steam mill days were over, for a portable mill man sees a hard life of it ; but with the return of spring and the flowers that bloom therein, I can feel that fascination for the steam mill working into my bones again, and it will not be many moons ere I will be piloting the festive saw again."

## PERSONAL.

Mr. John Allan Cameron, manager of the W. C. Edwards Company, Ottawa, and Mrs. Cameron, have returned from their European wedding tour.

Mr. James Lemay, of New Westminster, B.C., has been appointed crown timber agent for the Dominion Government in British Columbia, in lieu of Mr. Higginson, resigned.

The death is announced of Mr. F. B. Robb, secretary-treasurer of the Robb Engineering Co., of Amherst, N.S. Deceased was bathing at Fox Harbor, when it is supposd he was overcome by the heat.

Mr. Parent, Commissioner of Crown Lands for Quebec, left last week for Lake Temiscamingue, in company with Mr. G. Bryson, M.L.C., and Mr. D. Gillies, M.P.P. The object of the commissioner's visit is to settle some difficulties between the owners of timber limits and the settlers there.

## THE MARKETING OF LUMBER.

The problem of disposing of lumber after it is manufactured is one that seems to become more difficult and complex every year. Formerly there was but one way open to the producer of hardwoods—to sell his output to the wholesaler in bulk, most commonly as mill run, or common and better, and often in a single transaction covering the entire product of the season. A great deal of hardwood is still sold in this way, and there are many who contend that it is the best way for the mill man to handle his lumber. Advice is sometime given to the saw miller to cut all he can, and as soon as it is shipping dry load it up and forward it to some responsible wholesaler at the nearest available point, with instructions to inspect it and return to the shipper its value in current funds. Such ideally simple methods are, it must be noted, advocated chiefly by those whose interest lies in fostering the trade of the wholesalers, some of whom still adhere to the theory that the mill man ought to be entirely satisfied with whatever the buyer may be disposed to allow him. If such faith in the strict honesty and fairness of buyers were justified by experience, this method would present advantages of which mill men would be glad to avail themselves. It is economical, involving the minimum of expense in selling ; it is quick, enabling the producer to realize promptly upon his output ; but unfortunately it is successful only when the entire business is conducted with absolute fairness on both sides, and when neither party to the trade seeks to gain an undue advantage over the other. It is a practical failure in a general sense because of the inherent weakness of human nature. The average of honesty and fairness is doubtless the same in the lumber business as in other lines, and it involves no special condemnation of this trade, or any part of it, to affirm the impossibility of satisfactory dealings based wholly upon the good faith of the parties. Deviations from the golden rule are inevitable, and these make it necessary that both buyers and sellers should not trust too much to the honesty of those with whom they trade—that, in fact, they should take such measures to protect themselves and their interests as have been found necessary in other lines. Experience proves that, while between parties who know each other thoroughly, some of the ordinary rules of business caution may be relaxed, the only safe principle is to leave as little room as possible for fraud or for mistake.

In the effort to diminish the chances of loss arising from the incompetency or dishonesty of buyers, and to make it practicable for mill men to safely ship their products to market subject to a determination of their value on arrival, systems of inspection have been devised, designed to prevent fraud in grading and measurement and to secure to shippers the actual values of their consignments. These have done much to make the business safer and more satisfactory, but everybody knows that they are not so completely successful as to do away with complaint, or as to make it absolutely safe under all circumstances for mill men to ship to all markets, or to all buyers in any market. The careful shipper must still pick his customer, and often must follow his consignment most carefully to insure that he gets paid for what he ships. He can not safely depend altogether upon inspectors.

It must be granted, however, that this is no less true on the other side. Buyers have as much to contend with as sellers, and they are required to be as cautious and as watchful to secure what they pay for. All the incompetency and dishonesty is not to be found among the wholesale dealers, who are often the victims of the sharp practices of the country mill men, and who perhaps still oftener escape the snares laid for them only by their care and their thorough knowledge of their business. Indeed, mill men themselves have contributed much to produce the existing condition of insecurity, and to make the simpler methods of handling timber unsafe and unsatisfactory on both sides. Too many of them are intentionally dishonest, while many more are such poor judges of lumber that they are really unable to estimate fairly the value of what they are selling. It often happens that a mill man does not know what lumber really is, and in consequence ships stock that is below grade in the belief that he has selected an extra good lot. Few people in the country have any idea how often this happens or how many mill men there are who have been cutting lumber, it may be for years, who really know little about grades or the average quality of stock. They judge everything by what they handle themselves, and the product of their own mills, or even of the district in which they are located, may not show a fair average of lumber as it appears in a market drawing its supplies from all parts of the field. Ignorance of this character, or of any character, is not always distinguishable from dishonesty, and when it is, is usually harder to deal with.

In view of all the difficulties which surround the movement of lumber, and especially hardwood lumber, in its journey between producer and consumer, it is not surprising that the method, now so common, of selling at point of production should have grown up, and should still be increasing in favor. The advantages of it are many ; the chief disadvantage is that it involves extra expense in inspecting, the buyer being obliged to send his man to the mill to take it up. But this has of late been largely offset by the avoidance of yard expenses, and the direct shipment of lumber, so that in all large transactions the carload dealer who will inspect and measure his purchases at the mill can usually pay as much as the yard man who relies upon consignments to be measured and inspected in his own yard.

That the tendency of the business is toward inspection at point of shipment rather than at destination is proved by the fact that all yard dealers buy some of their stock that way, and many of them all of it. The difficulty of securing a satisfactory system of public inspection, which must be recognized, will likely drive the trade into this method of buying entirely in the near future, which will naturally cut consignment business down to a small figure.

The development of what is commonly called the carload trade is rapidly involving the yards as well as the exclusively carload dealers, and evidently means that eventually, and probably before very long, nearly all the hardwood product will be shipped direct from the mill to the user. There is a lack of economy in rehandling large lots of lumber which make a wholesale yard an expensive luxury, and which must ultimately force the yard business into the retail trade entirely. It is more nearly there now than is commonly supposed, or than many yard dealers like to admit. But the fact is that there are practically none that do not make most of their wholesale shipments direct, reserving their yard stocks for their retail trade. That they will do so more and more until they supply only team trade from their yards is already a foregone conclusion.

This is in effect putting the consumer nearer the stump, and a good many wholeselers are apprehensive that in its final outcome it will result in bringing producer and consumer so close together that the merchant's occupation will no longer exist. Of what use will the wholesaler be if consumers are to get their stock in unbroken carloads from the mill which cut it? The obvious answer of this question is that the function of the wholesale merchant is a larger and more important one than that of a salesman for the producer. It is and will be, as it always has been, the dealer's work to gather up a variety of stocks and to make them available to buyers whose diversified wants no single mill, or group of mills, can supply. The average user of lumber wants it of various kinds, qualities and dimensions, and often such a peculiar assortment of the three as to make it necessary that he should draw his supply from many sources. He cannot buy anybody's mill cut, to either his own or the seller's advantage, nor can he profitably buy his assorted stock in small lots of mill men here and there. He requires a uniformity of grading impossible to so obtain, and a familiarity, on the part of the person who selects his purchases, with his peculiar requirements that it would be impossible to impart to a number of different mill men. He must either employ his buyers and inspectors, and to that extent become a lumber merchant himself, or he must avail himself of the services of those who make a business of merchandising. Which is he most likely to do is best indicated by what he has done and is doing now. The flourishing condition of the carload trade in hardwoods sufficiently shows what this is.

From the mill man's standpoint the merchant is even more of a necessity. He needs him, not only to find an outlet for his production, but to aid him in marketing it, and in preparing it for market. The merchant's capital, his knowledge of grades, and of buyers and their wants, are indispensable to the mill man. He cannot organize and operate a selling department in his business that will enable him to do what the merchant will do at anywhere near what the latter will accept for the work, nor could he in many cases successfully job out his product in such fashion even if the question of economy did not arise. We see manufacturers who do this right along, but upon investigation it will be found that they are men whose experience and capital enable them to combine the two departments of the business. Often they are larger operators as merchants than as manufacturers, buying more than they produce. Their success, and the manner of it, but emphasizes the importance of the wholesaler's position, and, indeed, proves that he is an essential factor in the business.—Hardwood.

It pays to advertise in the Canada Lumberman.

# THE RETAILER AND Wood-Worker

## HARDWOOD FINISH.

Country builders who have always been accustomed to finishing their houses with pine or other soft woods experience some difficulty in getting a proper estimate of the extra labor required to finish in hardwoods. It is safe to say that the cost of labor in finishing off a room in cherry, black birch or white ash, is about double what it would be if finished in white pine. Black ash or elm finish takes about 50 per cent. more time to put in proper shape than pine, and oak, red or white, costs a trifle more to finish than cherry or black birch. Lumber cut from the butt logs of the black birch is one of our handsomest woods, and is strong and durable and will take a polish as high as the best cherry or mahogany. For newels, hand-rails and balusters it is superior to walnut, and much stronger, works better in the lathe and is less apt to chip or sliver under the carver's tools. If not quartered when sawn, it has the fault of warping, and will be affected more or less by atmospheric changes, but on fixed work this may easily be prevented by proper fastenings, and in freework, such as doors, sashes, venetian blinds, etc., quartered stuff should be used, or the doors and sashes should be "built up" with the grain reversed, which will prevent warping and twisting. This latter method is expensive, but insures lasting and satisfactory work, but when economy is the rule, quartered stuff worked solid answers very well. The working of hardwood of any kind requires more skill, a better class of tools and more exact workmanship than the working of pine or other soft woods, and these items alone entail extra cost. Where hardwoods are to be finished in a natural state great care should be taken to prevent lime stains, consequently it is better in all cases to put no finish until the plasterers have fully completed their work, for a lime stain on cherry or birch can never be taken out or completely covered without staining. In the absence of birch or cherry red beech makes a very handsome finish—in fact, beech has some beauties no other wood has, and when quartered and properly finished has a metallic sheen that is charming and unique.

---

The whole trouble with line shafting is that too many incompetent people think they know how to make it and how to put it up. In truth, however, a line shaft is a comparatively delicate piece of machinery, and its making, erection and maintenance all require good engineering sense. With this its friction ought to fall far below that which many experiments show to exist. But the average line shaft, it must be remembered, is a wriggling, squirming body, trying hard to preserve a straight line against the evil efforts of uneven bearings and injudiciously placed driving pulleys.

## MR. JOHN PIGGOTT.

In the accompanying cut is portrayed the countenance of one of the leading lumber dealers of Western Ontario, in the person of Mr. John Piggott, of Chatham, Ont. His first connection with the business was about forty years ago, as the following particulars of his life will show.

Mr. Piggott was born in Oxfordshire, England, in the year 1842. Emigrating to this country in 1848, he settled at Woodstock, Ont., spending his school days there. In 1859 he removed to Thedford, Ont., where he was engaged in the square timber and stave business. In 1869 he decided to leave that section of the country, and located a lumber yard at the corner of King and Forsyth streets, Chatham, where his office is at the present time. Then there was very little pine lumber used in that section of the

Mr. John Piggott.

country. His first stock of lumber was purchased from the late Peter Christie, of Toronto, and the first year's business was confined to about 500,000 feet. Steadily since that time his trade has increased, and last year's turn-over aggregated over 5,000,000 feet.

In the year 1884 Mr. Piggott found that to run a lumber business successfully it was necessary to have a planing mill, and at once set to work to erect the present factory at the corner of King and Second streets. Three years ago he purchased the lumber yard, planing mill, stock and wharf property of W. G. Nutson, in Windsor. In July of the following year this factory was destroyed by fire, but in nine weeks a more modern structure was erected and in operation. Upon purchasing the Windsor property Mr. Piggott admitted his sons as partners, under the name of John Piggott & Sons. The money invested has been earned entirely by the business. The firm make a specialty of turning out fine house finish in white pine, Norway pine, Georgia pine, red oak, black ash, cherry, birch, and all kinds of native woods. At present they are getting out the interior wood-work in quartered red oak for a fine residence in Winnipeg, Man. They manufacture mantles, office and bank fittings in wood.

The subject of our sketch has been given many positions of honor in the city, having served as a member of the Council and as president of the Agricultural Society. At the present time he is president of the Board of Trade.

---

## WOOD WARPING.

Wood, particularly hardwood, that has not been properly sawn, is almost sure to warp or twist to some extent in the seasoning. A board cut from the side of a log has the grain rings of the wood lying in circles having a greater length on one side of the board than on the other, and it is quite natural that these rings will endeavor to close as their circumferences get shorter by seasoning, and in closing they bend the board over, or, in other words, warp it. If the rings at one end of the board are out of line with the rings at the other end, which is frequently the case where the log was originally crooked, then the board will both warp and twist, as the rings do not shrink uniformly. Much can be done to prevent warping and twisting in the piling of the stuff. The boards should be laid on their flat side with the side down that shows the concave or hollow curve of the rings; battens or weather strips should be laid across the pile at regular intervals, and always directly over the corresponding battens below; then put another tier of boards on these again, and so on, until the pile is completed. The pile should have an inclination to carry off the rain, and should be topped off with rough boards enough to keep the pile dry. It is not best to pile the lumber where it will get too much sun or drying winds, as lumber seasoned too rapidly is apt to crack and check. Of course the best boards, boards that will not warp or twist, are "quarter sawn." It makes no difference what the lumber may be, whether it is pine, oak or ash, if it is quarter sawn it will not warp in drying nor yield so readily to changes of the weather. It has the disadvantage of being more expensive, as in sawing each quarter a narrow board is first taken, then one a little wider, and so on until the whole quarter is cut. Quartered oak, of which we here so much now-a-days, never changes its shape after it is worked, "it stays where it is put," as the carpenters say, a quality that is very valuable. Another advantage of "quartering" is that you get all the beauties of the grain shown up to better advantage than if the boards were just "sliced" from the round log.

---

An old wood-worker says maple is not fit to make a top of, whether quarter-sawed or not. Quarter-sawed is better for the weather, but quarter-sawed maple will shrink in thickness, and common sawed will shrink in width. The one is almost as bad as the other. The grain is so hard that glue will hardly penetrate it. It is very cheap, and the supply is greatly in excess of the demand. Log-run maple is offered at $10 and $12 per thousand. In many cases it is maple, beech and birch together.

## AN EXPERIENCE ON THE DRIVE.

THE following story, the veracity of which we do not vouch for, comes from Bangor, Maine:

BANGOR, Me., June 19.—There has been much rain of late, and the streams and lakes of Maine are so full that the drives of logs have come early from the hands of the operators into the charge of the lumbering associations, which handle the drives from the mouth of North Twin Lakes, seventy miles away, to the booms in this city. Thus the men who have been working in the woods all winter cutting spruce are now either out or on their way out.

Bangor is a centre for these fellows when they finish with their drives, and spend cash so freely that within a week they are generally ready to go to work again, drained to the bottom of their pockets.

One of these men, who came out Thursday of last week, had an adventure that will make him be talked of in all the camps of Maine. His name is Joe; he does not know what his other name is, because nobody ever told him; he cannot read or write, but his heart is in the right place, and he has many friends among the crew with which he has passed the winter.

Joe's crew was at work on Rainbow Lake last winter. The route to it lies away up the line of the Bangor & Aroostock Railroad, seventy miles, then across two lakes, and then up a mountain torrent to Rainbow Lake, which is so much higher than any neighboring body of water that the stream, named as is the lake, Rainbow, which connects it with the chain below, is a foaming rapid throughout its entire length.

The firm that was lumbering at Rainbow last winter cut a big lot of spruce. In order to get it down into the lake below they had to do a lot of hard work. At the outlet of Rainbow Lake, where the stream begins, was erected a dam, which held the water back from the stream below. Then two more dams were built at intervals down the stream, with gates to be lifted when a free flow was necessary. The fall in one mile, from Rainbow Lake to Nahmakanta Lake, the next below, is more than 500 feet. In some places the stream is almost like a cataract. The river runs between high rock walls that make passage along the waterway exceedingly difficult and dangerous.

With the gates in the three dams the lumbermen were able to control the flow, so that when they desired it the thundering rush could be converted into a babbling brook, and again transformed into one of the most wonderful natural water chutes in the world.

The plan was to collect the logs at the outlet, get on a big head of water with the dams, and then let them go suddenly. The two intermediate dams were to hold the water at various points when jams occurred along the narrow way. When all was ready the order was given and up went the gates of the first dam. The water sucked through in a fearful whirlpool, and with it went the first of the logs, scooting at a terrific speed down the narrow stream towards Nahamkanta.

Joe and the other men were out on the yarded logs, starting them on their way from the jam at the outlet, when some one got nervous and called, "Look out!" Instantly the men started for shore. The whole jam was moved together and there was death in the stampede.

Every man but Joe got ashore in safety, and Joe, just as the jam caught on a rock and lodged a few yards within the dam, leaped from what he thought was safety to an immense pine "butt," the lower end of a tremendous tree trunk, which immediately separated from the jam under his weight and went sailing toward the dam, where the flood was swirling angrily and boiling through the big hole under the gates.

Joe wore boots with steel spikes in the soles, like all woodsmen, so that he could hang to the logs all right, and he still carried his pick pole with which he had been working on the jam. The frightened members of the crew shouted all sorts of orders at the man as he floated away, and the boss screamed frantically, but the roar of the waters drowned it all, and away went poor Joe.

The orifice under the first dam was ample, and in three seconds the man and the log had gone through it and were spinning away down the narrow toboggan chute of the stream toward dam No. 2. When the crew last saw Joe that morning, he was still on the butt erect and alert, with his pole as a balance, going toward eternity at a rate to beat the Empire State Express.

Everybody shuddered when he thought of the second dam, where the passage was too small to allow the passage of the man and the log too, and where Joe's brains must be dashed, along with his mangled body and the splinters of the butt, against the projecting timbers of the structure.

But Joe was looking after himself. He weighed various chances to leap ashore between the two dams, but the rock walls, lifting high in the air above his head, gave him little comfort. He knew the second dam and that both the log and himself could not pass under its gates. Whether or not the signallers had the gates lowered made no difference with his chances; his momentum could not be checked, and to be dashed against the dam at the rate he was going would mean a horrid death.

Now the second dam was in sight, the gates wide open underneath and the low wooden structure over them. Joe saw one chance for life and took it. He had been to the circus with his brother once, up in the Canadian provinces, and there he had seen an equestrian ride a swift horse and leap over a bar as the animal passed under it.

The log was running at the speed of a train. When it had reached a point six feet in front of the dam, Joe lifted his pole high above his head and gave a mighty leap. The momentum of the log sent him flying through the air, over the dam by three feet, and across to the other side. Joe hardly dared to look as he began to come down, for fear his log had caught and that he was going to drop into the current and be killed under water.

Good luck was with him. He met the butt coming through the gates and landed on it neatly. The pole steadied his fall and the spiked boots held him firmly in place. Joe sighed with relief. But dam No. 3 was still to be passed.

On went the log at increased speed as the grade grew steeper. In twenty seconds the third dam was in sight, and Joe made another splendid leap, clearing the timbers like the projectile from a rifled gun, and catching the butt at the other side as handsomely as any circus rider.

From there to Nahmakanta was easy. Joe held to the log until he reached clear water at the foot, and until his momentum had carried him out into the lake for almost a quarter of a mile. Then he sat down on the log, straddled it and poled her ashore with his pick.

## NEW BRUNSWICK LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

THE month of July has been one of the most active in the history of the lumber trade of the port of St. John. The harbor has been alive with vessels and all available help has been employed in loading the same. This condition has been brought about partly by the strength of the British market and partly by the fear that an import duty would be imposed by the United States Government. A fortnight ago there were in port fifteen ocean steamships, totalling 25,655 tons, and sixteen sailing ships, totalling 13,582 tons, all loading for English and continental markets. It required not less than 25,000 standards, or in round figures 50,000,000 superficial feet to load these vessels, making a record of shipments for the month within a few millions of being half as much as shipped during the previous year, viz., 106,000,000 superficial feet. During July, 1895 and 1896, the shipments to the British market were 18,000,000 and 25,000,000 feet respectively.

At the time of writing much attention is directed to the action of the United States Senators with regard to the tariff. In the vicinity of the city there are fifteen saw mills. Four of these are owned by Canadians and eleven by Americans. The Canadian mills are those of Messrs. Randolph & Baker, George Barnhill, W. H. Murray and Hillyard Bros. The American mills are those of S. P. King & Sons, Andre Crushing & Co., C. F. Woodman, two mills, Charles Miller, Stetson & Cutler, two mills, Dunn Bros., E. D. Jewett, Purvis & Murchie, J. R. Hamilton and J. R. Warner. It is not to be wondered at, therefore, that an effort has been made to secure an insertion in the tariff act of a clause providing that lumber cut in the Province of New Brunswick, when owned by American citizens and manufactured by American labor, should be admitted free of duty. The shingle mills in St. John are owned by Charles Miller, C. F. Woodman and S. T. King.

The Hammond River Lumbering Co., of Robertson, is being incorporated, with a capital stock of $25,000.

The last instalment of the corporation drive has passed into the boom limits. A prominent lumberman states that the past season has been the most successful for river driving in the history of lumbering on the St. John river. He thinks that the Messrs. Moore, whose driving contract terminates this autumn, will make at least $20,000 on this season's operations.

Mr. George Upham has completed his new mill at Fredericton. The machinery is driven by a 100 horse power engine with large boiler, sawdust being used as fuel. The mill is fitted with Connell Bros.' rotary mill, capable of sawing 40,000 feet per day; McDonald edger, planer and lath machine. Mr. Upham is superintendent, C. E. Parker, sawyer and foreman, and F. Dibblee, filer. About thirty men will be employed and the output will be chiefly deals. The logs come from the Tobique river.

ST. JOHN, N. B., July 23rd, 1897.

Let me ask, says Mr. Andrew Carnegie in a recent address, under what conditions does the employer of labor make profits and become prosperous? Only when labor is prosperous, is his reply, and in great demand; when wages are the highest, and when the demand for his products are the greatest. Then, and then only, is the employer prosperous. On the other hand, when labor is not fully employed, and can be obtained for the lowest wages; when there is little demand for his products, then the employer can never be prosperous. In most cases he must not only make profits, but he must see his capital impaired month after month; he cannot gain, he must lose. Before the employer can be prosperous, prosperity must exist throughout the land,

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. III. TORONTO, ONT., JULY 28, 1897 No. 30.

**CANADA LUMBERMAN**

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

### WANTED TO BUY.

OAK RAILWAY SLEEPERS OR OAK TIMber cut to convenient sizes.
R. SPINDLER, BRUSSELS, BELGIUM.

### FOR SALE.

IF YOU WANT DRY DIMENSION CUT HEMlock lumber, common and good dressing pine, write to J. JACKSON & SON, Hepworth, Ont. Correspondence solicited.

### WANTED.

LUMBERMEN TO ADVERTISE IN THIS column stocks of lumber for sale. Probable purchasers look for this information. Address, CANADA LUMBERMAN, Toronto.

### OAK LUMBER WANTED.

PLAIN OR QUARTER SAWED OAK, ALL twelve feet, for picture mouldings; also ash. Address, MATTHEWS BROS. & CO.
48-52 Temperance st., Toronto.

### SITUATION WANTED.

BY EXPERIENCED PINE AND HARDWOOD Lumberman, as Buyer, Salesman or Inspector. Satisfactory references; low salary. Address
T. W. WALKER, 16 Beaconsfield Ave., Toronto.

### FOR SALE.

250 THOUSAND FEET DRY HARDWOOD Lumber—Red Oak, Hard and Soft Maple, Bass Wood, Black Ash and Elm and 500 thousand flour barrel staves.—THOMAS ROBINSON, Newbury, Ont.

### POSITION WANTED.

WRITE TO MY ADDRESS IF YOU WANT A young man to take charge of your office and keep your books; understands the inspection of lumber; best of references given as to character. Address A A., care of CANADA LUMBERMAN

### FOR SALE.

VALUABLE WATER-POWER WOOD-WORKing business, basket factory and saw mill; profitable trade established; hundred acres of land; in good agricultural country; plenty of timber; good buildings; ten acres of orchard; good shipping facilities; 50 acres taken in exchange; no encumbrances; easy terms. For further particulars apply to W. G BARNES, Green River, Ont.

## EXTENSIVE SALE BY AUCTION

### OF 1,837 SQUARE MILES

# Timber Berths

### IN THE PROVINCES OF ONTARIO AND QUEBEC

THE UNDERSIGNED HAS RECEIVED INstructions from Messrs. McLachlin Bros., of Arnprior, to sell by Public Auction at the Russell House, in the City of Ottawa, on

## Tuesday, August 10th, 1897

at two o'clock p. m., in separate parcels, the following

**TIMBER LIMITS:**

| | | | | |
|---|---|---|---|---|
| Parcel 1 | Keepawa and Dumoine | 573½ | sq. miles, | Que. |
| " 2 | Block A | 50 | " " | " |
| " 3 | Keepawa | 230¼ | " " | " |
| " 4 | Bonnechere | 257¼ | " " | Ont. |
| " 5 | " | 49½ | " " | " |
| " 6 | Petawawa | 130 | " " | " |
| " 7 | Madawaski | 201½ | " " | " |
| " 8 | " | 246½ | " " | " |
| " 9 | " | 54½ | " " | " |
| " 10 | " | 13 | " " | " |
| " 11 | Amable du Fond | 22¼ | " " | " |

With parcels 1, 3, 4 and 7 are supplies and shanty plant which purchaser of such parcels must take with limits at valuation.

For further information, conditions of sale, &c., apply to Messrs. McLachlin Bros., Arnprior, Ontario.

OF

# Timber Berths

DEPARTMENT OF CROWN LANDS,
(Woods and Forests Branch.)
Toronto, June 2nd, 1897.

NOTICE is hereby given that under authority of Orders in Council Timber Berths as hereunder mentioned in the NIPISSING, ALGOMA and RAINY RIVER DISTRICTS, viz., the Townships of Rathbun, Kelly, Davis, the north half of Scadding, and that part of Hanmer south of the Vermillion River, all in the District of Nipissing; the Township of Coffin additional, and certain small areas on the Spanish and Biscotasing waters, in the District of Algoma; and berths 36 and 37 sale of 1892, D 3, D 4, D 5, D 6, on Manitou Lake, and certain small scattered areas in the District of Rainy River, will be offered for Sale by Public Auction at the Department of Crown Lands, Toronto, at the hour of ONE o'clock p. m. on WEDNESDAY, THE EIGHTEENTH DAY OF AUGUST NEXT.

Sheets containing conditions and terms of Sale, with information as to Areas, Lots and Concessions comprised in each Berth, will be furnished on application, personally or by letter, to the Department of Crown Lands or to the Crown Timber offices at Ottawa and Rat Portage.

J. M. GIBSON,
Commissioner of Crown Lands.

N. B.—No unauthorized publication of this advertisement will be paid for.

### WANTED.

ADVERTISER WILL EXCHANGE WOODworking machinery in good order for pine or hardwood lumber. Corresspond with
Box 52, CANADA LUMBERMAN.

## MILL FOR SALE

SITUATED ON SALMON RIVER, VIC. CO., N. B., consisting of six Shingle Machines, Rotary Gang Edger, Lath Machine and Clapboard Machine. Water Power, with a never failing supply of water. Will cut the present season four million of deal, sixteen million of shingles and four million of lath.

There are 100,000 acres of timber land under lease, well stocked with cedar, spruce and hardwoods, to supply the mill with lumber. The mill property consists of 100 acres of land.

On the above property is a large store, storehouses, boarding-house, blacksmith shop and a large stable There are also six tenement houses. An electric light plant lights mill, store, blacksmith shop and stable.

This property is situated in the parish of Drummond, Victoria county, N.B., seven miles below Grand Falls.

For further particulars enquire of

STEVENS LUMBER CO.,
Grand Falls, N.B., or Fort Fairfield, Maine.

### CURRENT TRADE CONDITIONS.

#### ONTARIO

The imposition by the United States of a $2 duty on lumber has put a temporary check to shipments of lumber across the border, and at the present time the market is in a very unsettled condition. Quotations have been withdrawn, and manufacturers are now awaiting the action of the Dominion government with respect to the export duty on saw logs. Upon this will depend to a large extent the arrangements which will be made for the operations in the woods next winter, and lumbermen are therefore looking for an early declaration from the government. Many of the largest lumber firms will no doubt take steps at once to cater for the British trade, and the favor with which Canadian goods have been received of late in foreign markets augurs well for their success. The grave question is the disposition of the lower grades of lumber, which it is almost impossible to place profitably in the British market owing to the high freight rates.

Reports received this week from the mills tell of a delining market. Last year's stock has been well sold out, but considerable of this season's cut is still held at mill points. In hardwoods the chief call is for elm, red oak and basswood. The Ottawa mills are sawing largely on deals for the British market, to fill contracts made early in the year.

#### QUEBEC AND NEW BRUNSWICK.

In sympathy with the decline in the price of spruce deals in the British market, there is also a weakening on this side, and shippers do not exhibit the anxiety to contract for goods which characterized the trade earlier in the season. The feeling is, however, that the break is only temporary, and has been caused by the heavy arrivals of stock at British ports rather than by any falling off in consumption. The production of spruce in Quebec and the maritime provinces this season has been exceptionally heavy, and were it not for the favor which is now accorded Canadian goods, a decline would probably have been the result before this time. In any case, we think it would be a wise policy on the part of shippers to confine shipments as far as possible to goods already contracted for. Waney pine is firm in the Quebec market, and prices have advanced about one cent per cubic foot, as shown in the quotations given on the fourth page. Heavy shipments have been made from St. John, N. B., to Great Britain and the United States, and light cargoes to France and South America. Quotations of spruce deals at city mills are about $10.

#### MANITOBA AND BRITISH COLUMBIA.

Lumber shipping from British Columbia to foreign ports is not as active as earlier in the season. Shipments to Manitoba and the eastern provinces continue fair, but complaint is still heard of the low prices ruling. Red cedar shingles are experiencing quite a boom, and manufacturers have cleared out their heavy stocks which have been carried for some time past. Prices are hardening, and an advance is looked for at an early date. In Manitoba the lumber trade is steadily improving. Mills are taxed to their utmost capacity to fill orders, and crop prospects give promise of a year of successful business.

#### UNITED STATES.

The midsummer quietude has become somewhat pronounced in the lumber trade of the Eastern States, its influence being particularly noticeable in the pine cargo trade. In the west there is a rising demand, created by the continued advance in the price of wheat, and lumbermen consider the outlook for a good fall trade somewhat promising. In the Lake Superior and Michigan district the feature of the trade is the strength with which piece stuff is held. There is likely to be a shortage of this stock, and an advance in price will follow. The dry stock in the eastern markets has passed out of the hands of wholesalers, and the new cut has not been purchased with any liberality. Consumers are content to move slowly with present supplies until fall, when it is believed there will be a rush for stocking up. Anticipating this, a few wholesale

dealers have put in quite heavy stocks of Canadian lumber. Buffalo and Tonawanda dealers report trade as showing some life. Piece stuff and 12 inch boards are selling fairly well, but poor lumber is a drug upon the market, owing to the heavy stock. Good lumber will probably advance as soon as the situation becomes settled, in view of the duty of $2 per thousand feet now imposed on Canadian importations. At Boston spruce has taken another drop, and some of the mills will close down for a time. A revival of the furniture, car building and other consuming industries is looked for at an early date, when the demand for hardwoods will improve. Basswood has been selling freely of late in the east, especially the thicker grades. Some inquiry is reported for soft elm, which is held at Michigan points at $16 to $17 for firsts and seconds. Birch for furniture is also asked for, and prices are steady.

FOREIGN.

The heavy arrivals of wood goods at British ports has engaged the attention of importers, and few new contracts are reported. The market has shown a slight weakening, as buyers have been holding off in the hope that lower values would rule later in the season. The position is nevertheless regarded as satisfactory, prices being still at least 15s to 20s in advance of those obtained last season. There appears to be a growing demand for Canadian goods, a fact which is realized by importers, who are holding firm to prices. Very large stocks of spruce have arrived at London. Third quality has sold at £7 for 7 and 8 inch, and at £7 10s for 9 inch. Good first quality is scarce and wanted. Quebec 9 inch deals are said to be worth £12. Some inferior goods have been offered, which have had a depressing effect upon the market. At Liverpool spruce stocks are also heavy, and the tendency of prices is downwards. In pine deals this is not the case, as late arrivals have been to fill contracts made early in the spring. Glasgow has received considerable oak, elm and birch timber, as well as spruce deals. Birch continues in too heavy stock, and dealers find difficulty im making sales.

## STOCKS AND PRICES.

CANADA.

The steamship Eastlands left Quebec on the 17th inst. for London, with a cargo of lumber.

A. W. Featherstone, wholesale lumber dealer, of Listowel, Ont., reports a good trade in soft elm and black ash.

The steamship Akaba is now completing loading at New Liverpool Cove, Quebec, for the McArthur Bros. Co.

A raft of square timber, containing 135 cribs and owned by R. H. Klock & Co., is expected to reach Quebec this week.

The steamship Australia, for Greenock, completed cargo in the Louise Basin, Quebec, on the 24th inst., and left for sea.

H. Black & Co., of Fergus, Ont., have a large quantity of logs to saw, which will keep their mill running until late in the season.

The steamers Coquet and Osmanli are at present loading cargoes of timber and deals at Sillery Cove, Quebec, for Messrs. J. & W. Sharples.

Johnston & Beveridge, of Parry Sound, Ont., are in the market to purchase basswood logs on the line of railway between Kearney and Rose Point.

The Calvin Co.'s fourteenth raft of the season arrived at Union Cove, Quebec, on the 22nd inst., having made an exceptionally quick run from Garden Island to Quebec.

The steamer Lorle sailed from West Bay, N. S., last week with 2,389,604 feet of deals and 429.836 feet of deal ends, shipped by W. M. Mackay, of St. John.

The steamship Rydal Holme is now discharging a cargo of rails at Quebec for the Quebec District Railway Co., after which she will load a cargo of timber and deals for Ireland.

A statement of the exports from Vancouver, B. C., to the United States during the year ended June 30th last, is as follows: Logs, $10,983; lumber, $9,650; shingles, $18,375.

The steamer United Lumberman and consorts arrived at Buffalo on Monday last from the Georgian Bay, with 1,500,000 feet of lumber, upon which the $2 duty will have to be paid.

The exports of forest products from Windsor, Ont., to the United States for the quarter ending June 30th last, were valued as follows: Elm logs, $59,000; staves, $50,000; timber, $23,000.

The ship Hazelmoor sailed from Quebec last week, with a full cargo of deals, which were loaded at Pierreville by the Tourville Lumber Mills Co., on account of Messrs. Dobell, Beckett & Co.

The barque Sif, loaded by the McArthur Bros. Co., with a cargo of timber, etc., for the Imperial government, to be delivered at Chatham and Sheerness, left Quebec on the 22nd of this month.

A dispatch from Lockport, New York, states that several canal boats loaded with Canadian pulp wood are held at that place owing to insufficient bills of lading and improper designation of consignee.

A large raft of Ottawa square and waney pine was last week delivered at Sillery Cove, Quebec, to Messrs. W. & J. Sharples. This timber was the manufacture of the Gillies Bros. Co., Ltd., of Braeside, Ont.

A large quantity of lumber will be shipped this season from St. John, N. B., to the River Platte. J. R. Warner & Co. contracted early in the season for the shipment of seven cargoes, one of which has gone forward.

At Three Rivers, Que., the saw mills are working night and day, and the production of deals, &c., in this district will be greatly in excess of any previous year. The product of all the mills excepting one is reported to be sold in advance.

During last week over 27,000,000 feet of lumber cleared from the port of St. John, N. B. Of this over 20,000,000 feet went to British ports, 2,000,000 feet to France, 2,000,000 feet to Buenos Ayres and about 1,700,000 feet of long lumber, 4,000,000 laths and 1,500,000 shingles to the United States.

The barque Greenland cleared from Parrsboro, N. S., for Preston, England, on the 17th inst., with a cargo of 642,000 feet of deals, shipped by George McKean, of St. John. The barque Persia sailed on same day for Buenos Ayres with 494,957 feet of spruce boards, shipped by J. H. & J. W. Seaman, of River Herbert.

The steamship Marian, with a cargo of lumber shipped by Messrs. H. R. Goodday & Co., left Quebec for sea on the 17th inst. The steamship Eleanor completed loading a large cargo of timber and deals on the same date, and left for sea Sunday morning. The cargo was supplied by Dobell, Beckett & Co., and goes to Sunderland.

FOREIGN.

The Nellie Torrent and six consorts arrived at Bay City, Mich., last week with 3,000,000 feet of lumber.

The first cargo of pulp wood to be shipped from Bangor, Maine, to Manchester, England, was made a fortnight ago.

By the breaking of the booms at Waterville, Maine, some 5,000,000 feet of logs floated down the river, upon which a loss of 50 per cent. will result.

Box makers are placing orders at Tonawanda, realizing that prices are now at rock bottom. Barn boards, shaky dressing and common lumber are moving freely.

At Minneapolis, Minn., basswood is in fair request, but prices rule low. In birch only selected red sells with any freedom, the market value being from $13 to $15 for common and better.

Oak still has the preference in the Buffalo market. Ash and elm are also asked for, but dealers report very little life in the trade. The record of sales for the month of July is much below that of June.

There has been rafted from the Georgian Bay district to Alpena, Mich., this season, six rafts of logs, aggregating 24,000,000 feet. The total importations this year to that port will be about 36,000,000 feet.

The spruce market in the east has weakened within the past week. Random spruce is selling in New York at $11.50 to $12.50 for narrow, $14.50 to $15.50 for wide, and the logs from which this lumber is sawed are held at $9 to $12.50 a thousand.

The Puget Sound & South African Trading Co. have chartered a steamer to take a full cargo of fir lumber from Port Blakeley to Buenos Ayres. This, it is said, will be the first cargo of lumber ever shipped from Washington to the east coast of South America.

Churchill & Sims, London, Eng., realized the following prices for Canadian goods at their last auction sale: Per steamer "St. John City," from Halifax.—4 x 12/14 birch planks, 11d; 4 x 10 birch planks, 10d; 4 x 7 birch planks, 9d. Per steamer "Cameo," for Quebec.—12 x 3 x 9 1st spruce, £8 10s; 11 x 3 x 9 1st spruce, £8 5s.

The United States shingle market continues to strengthen. White pine and cedar are selling moderately, while the demand for western red cedars is greatly beyond the supply. The wet season is probably responsible for this demand. At Minneapolis the market is bare, as sufficient cars cannot be obtained to carry the stock. At Buffalo dealers are laying in shingles on an extensive scale. R. Laidlaw & Co. have received large quantities from Canada, and Haines & Co. have lately put in 3,000,000 feet of pine.

## BUSINESS NOTES.

Wm. Massie, jr., has purchased the lumber yard belonging to the estate of the late W. McRossie, of Kingston, Ont.

The Consolidated Lumber & Storage Company, New York, N. Y., has been succeeded by the Manhattan Lumber Company.

Roby & Swart, of Nashua, N. Y., have incorporated under the name of the Roby & Swart Lumber Company; capital stock, $100,000.

E. S. Curry has commenced business at 35 New Broad street, London, E. C., as agent for the sale of wood goods, under the style of Stanley Curry & Co.

James Smith & Bro., commission agents, Liverpool, England, have opened an office at Halifax, N. S., under the style of Smith, Tyrer & Co. Mr. Edgar C. Baker is manager.

The Fredericton Herald states that Fraser Richardson, lumberman, of Lower Brighton, N. B., is asking an extension of time. The assets are placed at $5,000 and the liabilities at $10,000.

The saw mill of John Harley, St. Gabriel, county of Rimouski, Que., was destroyed by fire last week. Some 42,000 logs were also consumed. The mill employed sixty-five men.

## FIRES.

M. Dean's saw mill at Sprucedale, Ont., was burned a few days ago.

A saw mill at Acton Vale, Que., owned by C. G. Langevin & Co., has been burned.

An old landmark to Quebec lumbermen was destroyed by fire on Thursday, the 23rd inst. The old mill at New Liverpool, known as Benson's Mills, and the property of Mr. Harper Wade, was burned to the ground. The machinery had been taken out of this mill some years ago. There was no insurance on the building.

## SHIPPING MATTERS.

The bark Eva Lynch will load deals at Halifax for the U. K.

Bark British America is fixed to load deals at Miramichi for Valencia, at 52s 6d.

The bark Misletoe will load lumber at St. John, N. B., for Buenos Ayres, at $8.

The ship George T. Hay gets 41s 3d on deals from Spencer's Island, N. S., to Sharpness.

The Timber Trades Journal, of London, Eng., states that freight rates show a hardening tendency, particularly those for small vessels. Charters have been made as follows for August sailing: Auretta, Bathurst, N. B., to Glasgow, 40s; Amyl, St. John to Belfast, 40s; Aloedene, Saguenay to Glasgow, 41s 3d; Simonside, Saguenay to London, 40s; Elfrida, Musquash to w. c. England, 42s 6d.

The following additional charters are reported: Bark Strathmuir, Miramichi to e. c. Ireland, deals, 43s 9d; bark Artisan, St. John, N. B., to Cardiff, 40s: s.s. Arthur Head, St. John to Bristol Channel, deals, 40s; Ship Mary L. Burrill, Saguenay to Rio Janeiro, lumber, $11; barque St. Peter, Bear River to Buenos Ayres, lumber, $8; Rosario, $9, Nicanor, Miramichi to New York, laths, 60c.; ship Creedmore, St. John to Cardiff or Newport, deals, 4 s. option w. c. England, 42s 6d.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Arnprior to Montreal, $1.50 per M ft.; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.: Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. To New York for boat delivery, lots 50 M ft. and over, $2.50 per M ft., under 50 M feet $3.25 per M ft. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Boat delivery, lots 50 M ft, and over $3.00 per M ft., under 50 M ft. $3.75 per M ft. Parry Sound, $4.00 per M feet; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum we ght 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the distric freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Sprague, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c. From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Central Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods

## DEVELOPING THE EXPORT TRADE.

A writer in the Toronto Globe, on the subject of developing our export trade, says:

The Norwegians use all kinds of ships, big and little. Where the water is too shallow for a large vessel, then they send a cargo on the small sized craft. I presume a 500-ton sailing craft, laden with lumber, would cross the Atlantic safely. Such a vessel could deliver Canadian lumber at many ports more cheaply than it could be transhipped from a large to a small coaster and then delivered. As it stands now, the Norwegians convey direct to the small ports, whereas Canadians convey to the large ports and let small vessels transfer and distribute. The Norwegian lumber is loaded and unloaded once, while Canadian material is loaded and unloaded twice. Of course I do not mean to apply this statement to all our lumber, or to the greater portion, as I have no means of comparison. But it is true in special cases, and the special cases we should watch.

And Canadians have not studied how to cater for the English market in small lumber. To watch the Norwegians unload their vessels, and see how they have cut and adapted the material to the purchaser's needs, is to learn that they have studied closely. When in Australia I carefully examined into this matter, and there I saw the Yankee ships unload, as well as the Norsemen, and in both cases I was forced to admire their methods. Doors and windows partly made, boxes of soap, fruit cans and all sorts of things partly made. I say "partly" because by this means they escape tariff on manufactured goods, and yet secured most of the advantages accruing from the manufacture. Instead of selling in lump, our people should seek to do all the work at home they possibly can thus furnishing the more labor for our people. And this is one of the best ways of favoring immigration.

Already I have written on the subject of paper pulp to Canadian papers, notably the Vancouver Daily World, but would add a few words in this connection. I have visited many large paper mills in England and find that Norway furnishes most of the "wood pulp." Where the small coasters cannot land direct, barges are extensively used. The paper mill men assure me that they would gladly purchase from Canada, if it would pay them to do so. And yet there has been no real test of the Canadian article. When a large concern is running along evenly for years business men do not care to go through the ordeal of getting out of the ruts. One manager said the only way to make a sure test would be for Canada to furnish a large amount—say enough for a full day's run—which in some cases would mean several hundred tons. With this amount the mill men and some of their best customers could make a thorough trial. Then if quality, prices, quantity and delivery could be regulated so as to suit there would be a fairly clear road to success.

## THE SOFT ELM SUPPLY.

ONE of the peculiar happenings in connection with this year's lumber trade is the disappearance of the bulk of the soft elm supply in Michigan. The finest soft, or gray, elm in the country grows in the northern counties of the lower peninsula of Michigan, and especially in the counties clustering around Grand Traverse bay. A few years ago this wood came into great prominence as a furniture material, especially in the line of parlor frame making. It ran wide and clear, was soft and easily worked, and was the ideal lumber to cut up economically in the factory. Of course, it was understood that it was not a fine wood, or capable of being employed in high-grade furniture. But as a common and good material for working into furniture "within the reach of all," and good enough for anybody when well finished, gray elm was a valuable and available kind of lumber. After the use of it gained full headway it was in great demand, all dealers in Michigan lumber handled it, and it stood next to oak in this market, at Grand Rapids and other furniture centres, in volume of sale and consumption. When the panic broke loose and the furniture trade began to run down, the call for soft elm diminished. Still, since it had been a wood so important, operators continued to buy logs and cut it lavishly.

The furniture trade continued to shrivel up as the years of depression succeeded one another, until the demand for elm seriously declined, and prices fell so low that there was no money in handling elm. In the meantime the manufacturers of coopers' stock and fruit packages had continued to use up material, and had largely utilized elm. Several stave, heading and hoop factories had been erected up in the elm district, so as to be near the supply. These and the fruit basket manufacturers bought up elm logs in large quantities, and thus made a market for the timber to such an extent that a comparatively small quantity was converted into the thick lumber used in furniture factories.

This diversion of elm to the cooper stock and basket factories was more pronounced last winter than ever before. The absorption went on while dealers and consumers in other lines of manufacture were indifferent, because there was little call from the furniture trade for elm. Nobody was hunting for it, and stocks were left to other courses. But it seems that elm did not go begging amid this indifference. Every available log was bought up. Prices went up, too, so that reports of logs being sold at $8 and $11 a thousand are frequent. The cleaning up of the log supply has induced a lively sale of such lumber as could be found at the mills, and it seems that the quantity obtainable at any price is very small, while such as is for sale is held at prices so high that dealers in this market cannot touch it. It looks as if the remaining elm supply will have to be left for the stave and hoop makers and the basket weavers, and that consumers in other lines will have to resort to something else in the shape of lumber. One dealer in this city suggests that the scarcity of elm will give black and white ash a chance to come to the front as market factors.—Northwestern Lumberman.

## CAMPBELLTON AS A LUMBERING CENTRE.

THE town of Campbellton, N.B., must no longer be regarded merely as a railway divisional point. It has become a very important lumbering centre, and of the new houses that have gone up recently quite a number are for the families of men engaged in the lumber industry, who work in the woods in winter and find employment in the mills in summer.

The growth in importance of Campbellton, N. B., as a lumber shipping centre has been rapid. Time was, and not so long ago, when Dalhousie had all the business. But the erection of mills at Campbellton, the provision of terminal facilities, and some necessary dredging in the channel have changed that, and already this season three steamers and four square rigged vessels have loaded deals at Campbellton, Kilgour Shives and D. Richards shipping each in the vicinity of 5,000,000 feet. Kilgour Shives has a large mill running night and day. W. P. Doherty has a mill above the town cutting deals for Richards, and also a shingle mill. The latter has a shingle mill of his own. W. P. Gray, A. E. Alexander and John Mayor have shingle mills. J. & E. H. Harqual have a sash and door factory. The boom company employ a lot of men. Over the river at Oak Bay, J. D. Sowerby is running a deal mill night and day and also has a shingle mill. The lumber industry is therefore a very important one.

There has been great activity in the shingle mills, and large shipments have gone to the States. With the imposition of a duty, however, the quantity going forward will decrease, and it is thought a considerable quantity of cedar logs will be held over.

Lumbering on the Restigouche differs from the conditions on the Miramichi and the St. John. The logs on the latter streams have been pretty well cleared for a long distance, and each year sees the operator going further away from deep water. On the Restigouche the annual cut has never been very large, though gradually increasing. Most of the timber lands are held by a comparatively few operators, who will be in no hurry to deplete the available supply. This year they had great success with their drives, and except a couple of millions owned by Geo. Moffatt, of Dalhousie, practically all the logs were got out safely. There will be more deals shipped than last year.

## MATCH BLOCKS.

THE casual user has little idea of the high class of white pine lumber, and the great quantity thereof, that is used in the manufacture of matches. In former years match blocks from which matches were made were cut entirely from straight-grained white pine uppers. Nowadays more economy has entered into the deal, and soft white pine timber is cut into bolts of 16 inches in length. The soft and straight-grained and clear portions of these bolts are resawn to a thickness of two inches on shingle machines. The hard-grained, cross-grained and knotty or defective portions of the bolts are made into shingles. These two-inch pieces are then loosely piled out of doors like so much cordwood, for air-drying. The match-maker will have nothing to do with kiln-dried stuff, as it renders the match stick too brittle and brash for satisfactory results.

When thoroughly dry, these pieces of straight-grained lumber are cross-cut into sections 1⅞ to 2¼ inches in length (the various lengths providing for various-sized matches) and the pieces are then split into sections of from three to six inches in length, thus producing match blocks. Any piece in which the grain for the length of the block varies more than one-half the thickness of a match from being straight-grained is rejected as being unsuitable for the purpose. Likewise, all pieces showing hard or gummy grain are rejected. The waste, after all the care taken to secure the original two-inch pieces of straight-grained, clear lumber, varies from 25 to 50 per cent.

## CLAPBOARDS.

THE word clapboard is a word used in the New England States for a thin, narrow board used to cover the sides of the houses and placed so as to overlap the one below; it has been supposed to be an Americanism, but, like many other Americanisms, it was brought over to this country by the early English colonists. According to very old dictionaries published in England, clapboards were thin boards formed ready for the cooper's use for the manufacture of casks. They were originally "cloveboards," because they were "cloven" out by hand and not made with a saw as other boards are. In course of time the word was abbreviated to "cloboards," "claboards" and "clapboards." In the law of the Massachusetts Colony, in 1641, the price of these articles was three shillings for "clapboards" five feet in length. The legal price for the work performed by hired labor was: "If they cleave by the hundred, they shall be paid six pence per hundred for five-foot boards." In other parts of the country the term siding or weather-boards is used to designate this particular product.

## PIANO CASES.

ONE of the most important uses for soft elm in a limited way is for piano cases. It is used for the heavy frame in the back of which the action is fastened. This frame must be firm and solid and of good material. The piano case factories buy the soft elm log run, mill culls out, of course, and two inches thick. Strange as it may seem, considering the slow improvement in business, the piano case makers report the business as fairly lively, much better than it has been for nearly two years.

It is a fact that the majority of piano cases made in this city are made of native wood, black walnut and white oak taking the lead. Red birch with mahogany finish and cherry are used somewhat. Nearly all the black, or so-called ebony, cases are made of good solid Michigan hard maple, colored to stimulate ebony. There is an occasional real ebony case made, but the real wood is hard to work and keep in place. Some rosewood is also used, but it is not as popular as it once was.

Next to black walnut and white oak the wood most used is mahogany. This, as well as all other foreign woods is used mostly in the shape of veneers, with solid native wood, poplar being the favorite. Occasionally a costly case is made of solid mahogany, or some other choice foreign fancy wood. Some use is made of prima vera, or white mahogany, and there are a number of native woods, which are rather rare, used, such as white holly and myrtle. Curly birch, curly and bird's eye maple, burls of various native and foreign woods, in fact all sorts of attractive accidental growths of wood are sought after by the case makers, and are used for panels and ornamentation, if not for the entire case.

The pin boards of pianos, for holding the pins over which the wires are strung, are generally made of quarter sawed hard maple, the quarter-sawing rendering the wood less liable to split from the powerful pull of the wires. One hardwood lumber firm in this city makes a specialty of furnishing this quarter sawed maple by the cargo, nearly monopolizing the trade in the west.—Hardwood.

Messrs. J. & P. Ament, of Brussels, Ont., are at present turning out 4800 barrel heads per day at their mills.

# THE NEWS.

—A saw mill is being erected at Mossy River, Dauphin District, Man.

—Geo. F. Beech is erecting a steam saw mill at Meadows, Ont.

—Jones & Finch have secured a large timber grant at Fort Steele, B.C.

—Grant & Kerr's new saw mill at Ladnor, B.C., has been completed and put in successful operation.

—Mr. William Mackay, of Ottawa, has taken square timber to Quebec for fifty-three successive years.

—Five steamers are chartered to carry white birch spool bars from Bangor, Maine, to the Scottish thread mills.

—Sequime & Powers, who operate a saw mill in Midway, B. C., have been succeeded by the Boundary Creek Lumber Co.

—Messrs. Thomson & Blakeley have purchased a planing mill property at Port Credit, Ont., and intend putting in additional machinery.

—James McLean, of Bryson, Ont., has lately added new machinery. He purposes enlarging his premises and engaging in the manufacture of furniture.

—Ritchie Bros., of Aylmer, Que., will put in a band saw for next season's operations. They are cutting a quantity of dimension timber for Klock Bros.

—Geo. W. Upham, the Tobique lumberman, is erecting a saw mill at Fredericton, N. B. The machinery from his Tobique mill will be transferred to the new mill.

—As the result of a reduction of ten per cent. in wages, the employees of James Murchie & Sons, Calais, Me., recently went on strike, but have since returned to work.

—The lumber business employs more persons than all other industries in the United States. By the census of 1890, it is shown that 373,085 are receiving a livelihood from it.

—Messrs. DeCew, late of Essex Centre, Ont., have made application for 160 acres of timber property at Arrow Head, B.C., with a view of erecting a saw mill at that point.

—In the ten months ending June 30, 1897, Mexico imported lumber and timber from the United States valued at $1,618,506, a gain of $367,620—gold value—over the previous ten months.

—The large iron smoke stack of Gillies' saw mill at Braeside, Ont., recently gave way. About thirty feet broke off at the top and fell on the platform below. A horse belonging to the firm was killed.

—A writ has been issued against Harriet Murray, as an executor of the estate of the firm of Murray & Cleveland, to recover the sum of $739 for lumber sold to the firm by the Casselman Lumber Co., of Ottawa.

—An electric light plant has been installed in the Aberdeen Mills at Fredericton, N.B. The proprietors are well satisfied with their investment, which makes it possible for the mills to almost double their former capacity.

—The Rat Portage Lumber Co., of Rat Portage, Ont., find such a demand for their lumber, doors, sash, etc., that they are obliged to run their mills night and day. The principal demand is from the west, while the town orders and those from the district of Rainy River have exceeded those of any former season.

—Mr. Robert Ward, of the Victoria Lumber Co., Chemainus, B.C., has returned from England, after an absence of two years. Mr. Ward states that for the Jubilee celebration over 76,000,000 superficial feet of lumber—an amount that would represent 75 shiploads—was used for putting up the stands and seats for spectators.

—A person by the name of McAlphine, representing himself as an agent of Smith & Elgie, a reputable firm of Webbwood, Ont., recently engaged about thirty men in Toronto to go to the lumber mills at that place. He exacted some $50 from the men as commissions, but when they reached the Union Station McAlphine could not be found.

—Mr. Greenway is credited with having made the statement that American lumber can be laid down at Manitoba points at $5 or $6 per thousand feet less than would be paid for the Canadian material of like grades and dimensions. This statement is disputed by Mr. D. C. Cameron, of Rat Portage, a gentleman well versed in lumber matters.

## CASUALTIES.

—Winfield Harrison, while rolling logs at Griffith's cheese box mills at Thornbury, Ont., accidently fell into a vat of scalding water.

—Robert Veitch, of Clarksburg, met with an accident in Peter's lumber mill at Parry Sound which caused his death. A board, falling from the top of a lumber pile, struck him in the body.

—J. A. Hadley, of the S. Hadley Lumber Co., Chatham, Ont., was superintending the loading of some shingles, when the pile fell upon him, burying him under the heap. Fortunately he escaped without serious injury.

Two little boys, sons of Mr. Blanchard, employed in Adam & Burns' mill at Bathurst, N.B., were playing around the mill, when they got into the sawdust shoot, were carried some distance and terribly injured.

## TRADE NOTES.

A shingle machine, manufactured by the Lloyd Manufacturing Co., of Kentville, N.S., was recently shipped to Huntingdon, Que.

The Waterous Engine Co., of Brantford, Ont., are installing a 40 horse power engine and boiler in the lumber and planing mills of Thomas Bros. at Jerusalem, Ont.

The new lumber mills and grounds of Messrs. D. & J. Ritchie & Co., at Newcastle, N.B., have been equipped with an electric light plant by John Starr, Son & Co., Ltd., Halifax. This installation consists of about 200 incandescent lamps of 16 and 32 c.p., and by it the output of the mill will be much increased. Messrs. Starr make a specialty of installing electric plants in lumber factories, and many of these in Nova Scotia and New Brunswick have been equipped by them.

The Dodge Wood Split Pulley Co., with works at Toronto Junction and head office and sales rooms at 74 York St., Toronto, report being quite busy and running full handed on wood pulley outfits for saw mills and power plants throughout the Dominion. The company have equipped the Montague Paper Co.'s saw mill at Lake Megantic, Que., with a full set of pulleys, including some very large sizes for heavy power. They are also supplying the pulleys for the new saw mills at Fenelon Falls and for Gillies Bros.' mill at Sand Point, and have some very large and heavy wheels in work for the electric plant at Rat Portage. The Dodge Co. patent split friction clutch is also becoming well known among the large mills and repeat orders are coming in. The company say that the large users throughout Canada are becoming more familiar with the merits of the Dodge pulley, with the result that the demand is increasing from that quarter. The Dodge Co. have issued a most complete 300 page catalogue covering their full line of power transmission specialties, which every mill man should have. It will be mailed free on application.

## PUBLICATIONS.

We have received a copy of a valuable book, entitled "Credits, Collections and Their Management," which contains many department forms, and is published by the Lawyer and Credit Man, of 178 Fulton Street, New York. The author is Mr. W. H. Preston, president of the National Association of Credit Men of the United States, which fact alone is a guarantee of its usefulness. The subjects embraced by the book are treated in a very able manner, the author adding to his own experience a study of the methods and forms in use in many of the best departments of the country.

Mr. James Dollar, of San Francisco, California, at one time a resident of Ontario, has favored THE LUMBERMAN with a handsome souvenir of the timber industry of California, entitled, "The Home of the Redwood." It is published by the Redwood Lumber Manufacturers' Association, and the letter-press and numerous half-tone illustrations which it contains convey to the reader a fair conception of the methods of lumbering on the Pacific coast. Testimonials of the good qualities of redwood and comparative tests of pine and redwood for paving purposes are also given.

# WOOD PULP DEPARTMENT

## THE MASTERMAN PULP MILL AT CHATHAM, N. B.

[COMMUNICATED.]

THE Masterman Sulphite Fibre Company's pulp mill, which has recently been sold to Mr. Albert E. Reed, of Maidstone, England, for $185,000, is situated at Mill Cove, on the Miramachi river, opposite the town of Chatham, N. B., and comprises nine massive buildings of wood, resting on stone foundation, all covered with iron, and most substantially constructed. The store room is 100 ft. x 50 ft.; the paper room, 150 ft. x 50 ft.; the tubular boiler house and machine shop, 104 ft. x 44 ft.; the Galloway boiler house, 50 ft. x 40 ft.; the digester room, 90 ft. x 31 ft.; the wood room, 70 ft. x 50 ft.; the acid plant, 70 x 60 ft.; the sulphur burning room, 70 x 40 ft., and the riffler building, 100 x 20 ft.

In the paper room is a fine cylinder paper machine, with twenty-one dryers 36 inches in diameter, built by John Bertram & Son, Dundas, Ont., and which works beautifully. Immediately behind this machine are ten noiseless suction screens for screening the pulp, built by J. M. Ruddock, of Chatham, N.B., and behind these is a 60 h.p. Leonard Ball automatic cut-off engine, which drives the screens and paper machines, and which was built by E. Leonard & Sons, of London, Ont. Everything in this room is very handy, and when the rolls of pulp are taken off the winder they are in the store room. The foundation for another paper machine was also completed in this room.

From the paper room we pass into the machine shop and tubular house, which is a stone structure. Here is a 40 ft. gap lathe, with a 22 ft. bed, an 18 in. x 8 ft. bed lathe, a 30 in. vertical drill, and a 30 in. x 8 ft. planer. A large portion of the machinery connected with the mill was built in this shop. At the other end of this building are two tubular boilers of 110 h.p. each, which supply the steam for the paper room, wood room and acid plant, and were built by Leonard & Sons.

Next we come to the riffler building, in which the pulp riffles over boards 6 in. high, 4 ft. wide, and 4 ft. apart, for 100 ft., there being three of these boards. These boards catch a large quantity of dirt which settles from the pulp as it flows gradually along and into the screens in the paper room. At the head of this room are two screens which catch quite a quantity of dirt from the pulp before it enters the rifflers. Below these rifflers are two stock tanks, into which the pulp is pumped from the blow tanks, and from these tanks the pulp can be used as required.

The next building is the Galloway boiler house, where the steam is generated for cooking the pulp. Here there is a large Galloway boiler of 7 ft. in diameter and 32 feet long, which carries 100 lbs. pressure, and was also built by Leonard & Sons.

From the boiler house we pass into the digestor room, where the pulp is cooked. Here are three large digestors, built by Leonard & Sons, 9 ft. in diameter and 32 ft. long, built of 7/8 in.

steel, and lined with tile. It was in these digestors that the finest sulphite pulp ever produced on this continent was cooked in twelve hours. They were built from drawings by Mr. T. R. Allison, the chief engineer of construction. Above these digestors is a large chip bin for holding the chips when prepared for the digestors. Large hoppers extend from the chip bin floor to within 3 ft. of the neck of the digestors, so that when filling a disgestor a light wooden shute is pushed in between the hopper and the neck of the digestor, a slide drawn, and the chips fall from the bin above and fill the digestor in a remarkably quick time. One of these digestors can be blown off, re-filled with chips and acid, and started cooking again in the short time of thirty minutes.

The wood room is next reached. In this building the wood is prepared for the digestors; the logs are drawn up the haul-up from the boom into the wood room, then rolled onto endless chains and drawn up against the saws, cut into lengths of 30 in., then barked on the barking machines, the bark dropping into a conveyer and being carried into the furnaces of the tubular boilers. After the bark is taken off, the pieces go to the wood splitter, where they are split, then to the boring machines, where all the knots are bored out, then to the chipper, where it is cut up and falls through the floor into the chip breaking machine, which breaks all the wood up to a uniform size ; from the breaker it falls onto the shaker or screen, where all the saw dust and long slivers are shaken out. This shaker shoves the chips on to a short conveyor, which carries them into the chip bin above the digestors. It will readily be seen how well this machinery was planned, by having the material drop from one machine to another, thus doing away with all elevators and a large amount of machinery and expense.

From the wood preparing room we pass into the acid plant and sulphur burning room, where the acid is made for cooking the pulp. It is all run by gravitation, doing away with all acid pumps, which are very expensive to keep in repair in a sulphite mill. Starting at the top of the upper floor, the lime is slacked in an iron tank, then run into two mixing tanks, where water is added to bring it to the proper gravity, and it is ready to enter the acid absorbing tanks, of which there are three in each system (there being two systems.) When the lime and water is let into the first or upper absorbing tank, it continues its flow into the second and third ones, then flows into the settling tanks and from these into the storage tanks, where it is ready for use. From these storage tanks it is drawn off as required in the digestor room, all flowing by gravitation. During the flow of the lime and water through the acid absorbing tanks it is met by the sulphur gas from the burners, which is drawn through the liquor by large vacuum pumps, which brings the lime and water up to the proper acid test.

The heavy wood room machinery, such as the barking machines, splitter, chipper and grinder, was built by John Bertram & Sons, of Dundas, while the shafting, boring machines, acid plant, etc., were built on the premises by Mr. T. R. Allison, who designed the mill. The complete mill, with property, cost in the vicinity of $100,000, and was built in ten months. The buildings are sufficiently large to manufacture thirty tons of pulp in twenty-four hours, the machinery having a capacity of fifteen to eighteen tons. It is estimated that the additional machinery required for a thirty-ton mill could be installed at a cost of $30,000.

## PULP NOTES.

The Chicoutimi Pulp Company are making rapid progress with the construction of its mill at Lotbiniere Falls, Que. From 250 to 300 men will be employed.

Mr. J. S. Larke, trade commissioner in Australia, writes that the first orders for Canadian pulp wood are being filled, and he is sure there is a better opening for Canadian paper.

The St. Raymond Company, with a capital of $50,000, has been incorporated at Montreal. One of the objects of the company is to manufacture wood pulp and articles made therefrom. Among the promoters are John Macfarlane, Walter Drake and George Finley.

The Laurentide Pulp Co., of Grand Mere, Que., will at an early date add a three machine paper mill to their pulp plant, with the object of cultivating an export trade with Great Britain. It is reported that an order for the machinery has been placed with American manufacturers.

A rumour is current that in the near future the erection of a large pulp mill at St. John, N.B., will be commenced. The amount to be invested is variously stated from $100,000 to $150,000. Should the proposition be carried out, it will certainly prove a profitable investment and of great benefit to the city.

An exchange says that the first raft of pulp wood from Canada by way of the great lakes is expected to arrive at the Long Tall Point docks of the Pulp Wood Supply Company, near Green Bay, Wis., in a few days. The raft will contain 5,000 cords and others will follow in rapid succession from the Georgian Bay district.

In Germany and Russia railroad rails have been successfully made of entirely paper material. The mode of making the rails consists in the employment of moulds and powerful pressing machines, the former for shaping the rail, and the latter for consolidating purposes. Wood pulp has not been tried with any marked success as yet, but ordinary pulp from rags, rope stock, etc., answers the pupose.

The Paper Trade Review of London, England, says: Scandinavian wood pulp prices continue to rule firm, but there is a feeling of uneasiness in the trade as to how long quotations will be maintained. Several makers view with concern the steady increase in the consumption of Canadian pulp on the part of English mills, and the starting up of new undertakings in Canada with British capital. Any diversion of trade is partly attributed to the action of certain British wood pulp firms, who also act as agents for Scandinavian mills. The latter fancy they have a grievance.

The Conference Committee of the Senate and House of Representatives of the United States Government have reported a retaliatory clause as follows: "That if any country or dependency shall impose an export duty upon pulp wood exported to the United States, there shall be imposed upon printing paper when imported from such country or dependency an additional duty of one-tenth of one cent per pound for each dollar of export duty per cord so imposed, and proportionately for fractions of a dollar of such export duty."

MANUFACTURERS

**Of Pulp Machinery** should place their announcements on this page. The pulp industry is a growing one, and a number of new mills are likely to be erected in the near future. Write for card of advertising rates.

## GIANT FIR TREES.

MR. J. SPROTT, superintendent of roads for the district of New Westminster, B.C., has received, for consignment to Kew Gardens, London Eng., the great botanical, horticultural and forestry display centre, officially maintained by the British government, a splendid cross section of one of British Columbia's giant Douglas firs. The section measures 6 feet 9½ inches in diameter, and is without knot or blemish. The fir, whence it came, stood 268 feet high, and the selected specimen was sawn at a point 11 feet from the base. The tree grew in the valley of the Squamish in the Vancouver coast district. This section of giant fir will, at Kew Gardens, be seen during each year by several thousand visitors, including botanical and forestry experts from all parts of the world, and should, together with the giant flagstaff of Douglas fir which is to float the Canadian flag over the rifle shooting camp at Bisley this year, give Englishmen a better notion of the magnificent timber of the Dominion's Pacific province.

---

The wooded area of British Columbia is estimated at 285,000 square miles, and includes 40 kinds of timber. These forests will increase in value year by year as the supply diminishes in the east.

Supplementary letters patent have been issued whereby the total capital stock of the Laurentide Pulp Company, Limited, is increased from three hundred thousand dollars to nine hundred thousand dollars.

### LUMBER OF THE FUTURE.

It is difficult to conceive of anything for which paper lumber, or if you please, pulp lumber, cannot be adopted, says an exchange. Tubs and pails are no novelty, but boards an inch thick and 30 inches wide are not so familiar objects, while yet they have been produced, and at a first cost scarcely above that of the price for which ordinary No. 1 common pine lumber will retail. It is some years since the writer has seen specimens of this lumber, but that it has been produced is evidence that as occasion demands it will come to the front. So, too, with doors, which a recent patentee proposes to mould under great pressure from pulp, which is colored while in the soft condition, to give rich effects in panelling and in frame, while securing all the strength desirable in a door.

So, too, with wall brackets, picture moulds and balusters, including frieze and cornice, which can be moulded hollow, and with a waterproof cement which is incorporated in the pulp, is claimed to withstand the weather as well as the terra cotta, which forms so important an adjunct to the steel structures for which our great cities are becoming noted. So, too, mosaic blocks for inlaid floors may be colored to represent marble, oak, or any other desirable appearance, and being compressed to great density, will present a good wearing surface. Pulp, moulded as a covering to steel or iron posts, is claimed, from its comparatively non-inflammable character, to be equally with terra cotta adaptable as a protecting and ornamental shield, which can be as highly finished as may be desirable to the most æsthetic taste.

## THE STAVE INDUSTRY IN CANADA.

THE United States Consul at Chatham, Ont., commenting on the early extinction of the stave industry in Canada, says :

The only elm fit for cooperage stock found in British North America lies in the counties of Kent, Essex and Lampton, and of the original forest only 150,000,000 feet of stumpage remain. It has been depleted not only by the demands of the Sutherland, Innes Co., with its seventeen mills, but by smaller manufacturers, and millions of feet are yearly rafted to the United States. The rock elm found elsewhere in Canada will not do for staves, and with the exhaustion of the 150,000,000 feet above referred to, operations here must entirely cease. It is estimated by the company mentioned above that their mills will be idle in three years, and 1900 will see the elm stave manufactured only in the United States. They claim, furthermore, that the end of the use of elm for staves is in sight and cannot possibly be deferred for more than a quarter of a century. The bulk of this timber left suitable for staves lies in Michigan and Indiana, and that gone, they expect to see the cottonwood used for headings and the gum and red oak for staves, unless some other form of barrel or package first comes into use.

## HOW DID HE GET THE CREDIT?

STRANGER—Beg pardon, sir, but you have the power to do me a great favor, and one that I will repay.

Bankrupt (sadly)—I ! I am afraid you have made a mistake. I am of no use to anybody. I have failed for half a million, with no assets.

"So I heard."

"You know it, and yet you say I can be of service to you ?"

"Yes, sir, I beg you will not refuse."

"But what can a miserable bankrupt like me do for anyone ?"

"I want you to tell me, sir, how you got so much credit ?"—Timber Trades Journal.

Cassier's Magazine for August is a special ship-building and marine engineering number, in which the complete story is told of how a modern steamship is designed, built, launched and fitted up with machinery. Altogether there are nineteen articles, amounting to over 300 pages of text, with nearly 400 beautiful engravings.

# R. H. SMITH CO., LTD.

## St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, f it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N. B., Nov. 17th, 1894.

R. H. SMITH CO., Ltd., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

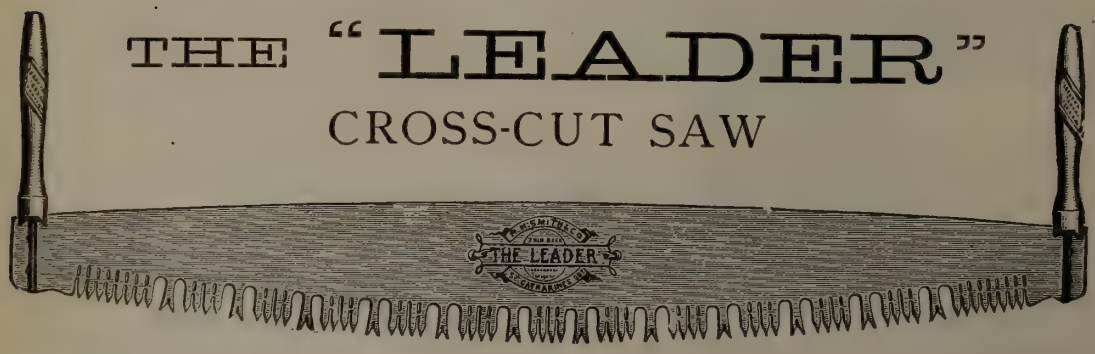
R. H. SMITH CO., Ltd., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P. S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W. G. S.

## THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

## MEETING OF ONTARIO LUMBERMEN

### Large and Enthusiastic Gathering at the Board of Trade Building in Toronto.—Resolution Adopted Asking the Ontario Government to Amend the Timber Regulations.—Opposition from the Ottawa Valley.

IN response to an invitation issued at the instance of Mr. C. Beck, of Penetanguishene, a meeting of Ontario lumbermen took place in the rotunda of the Board of Trade Building, Toronto, on Thursday, August 19th. The meeting was, in point of attendance and enthusiasm, one of the most successful that has been held in the province for years.

Georgian Bay lumbermen were present in full force, and formed the chief element of the meeting. The Ottawa valley was represented by Messrs. W. C. Edwards, M. P., Levi Crannell, W. C. Hughson and W. Anderson.

The circular calling the meeting read as follows :

TORONTO, AUGUST 3rd, 1897.

I have been requested by several large mill owners to call a meeting of the Ontario lumbermen and mill owners to be held in the Board of Trade Building, Toronto, on August 19th, at eleven o'clock a. m., for the purpose of discussing the general aspect of the lumber trade, and also to take into consideration the steps that should be taken by the government in regards the export duty on logs and import duty on lumber.

You are well aware that under the present American tariff and our present law, free trade in lumber and logs is detrimental to the general lumber interests of Ontario, and I trust that in your own interest as well as that of the lumber trade generally, you will make it a point to be present at the meeting.

There will also be a proposition made to form a lumber association to further the interests of the lumber industry.

All lumbermen are cordially invited to attend whether members of the Board of Trade or not.

EDGAR A. WILLS,
Sec. Board of Trade.

The questions to be discussed were of the utmost importance to the trade, and it was evident from the eloquence of the speakers that they had come prepared to give a full expression of their views. When the meeting was called to order the following persons were in attendance :

W. C. Edwards, W. C. Edwards & Co., Ottawa.

On motion of Ald. Scott, seconded by Dr. Spohn, Lieut.-Col. John I. Davidson was elected to the chair and Mr. E. A. Wills appointed secretary. The chairman then read the circular calling the meeting, and stated that the voice of such a representative gathering would no doubt have much influence with the government. It was then in order to proceed with business.

For a time no one seemed anxious to take the initial step, but Ald. Scott finally came forward with a resolution which he had prepared. He wished it understood, however, that the idea contained therein was brought forward by Mr. Bertram, and not by himself. The resolution was as follows :

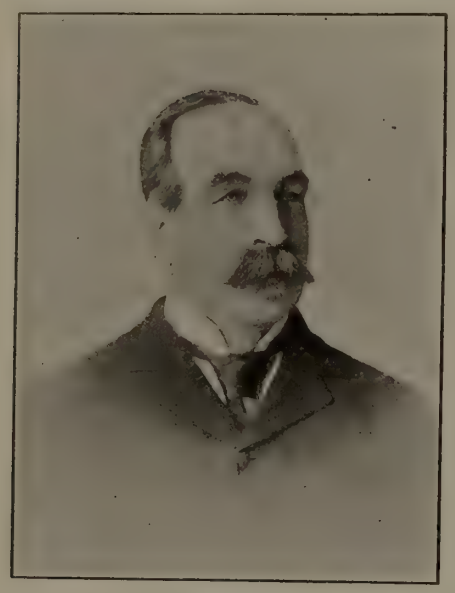
That whereas the government of the United States have imposed an export duty of $2.00 per thousand feet on sawn lumber; and whereas that government has made special provision in the tariff that a still higher import duty in a certain event be imposed on sawn lumber; and whereas the government has not imposed an export duty on saw logs; and whereas by the present Canadian tariff sawn lumber is admitted into Canada free of duty; and whereas the said Canadian tariff permits the export of saw logs free of duty; and whereas the effect of such tariff arrangements is highly injurious to the true interests of the owners of saw mills in Canada, to Canadian workmen and Canadians generally, as tending to transfer the sawing of lumber from Canada to the United States;

Be it therefore resolved, that in the opinion of this meeting the export of saw logs should be restricted, and with that object in view the government of the Province of Ontario be requested to so amend the pine timber regulations that all pine lumber cut under license in the Province of Ontario should be manufactured in Canada.

With regard to the merits of the question, Ald. Scott stated that he did not propose to say much. The situation for Canadian saw mill men and Canadians generally, not only workmen, but those who were engaged in furnishing supplies, was a very grave one. The action of the United States government had placed Canadian lumber manufacturers in an unfair condition, and as Canadians we could not with dignity submit to the injustice.

Continuing, Ald. Scott said: "The import duty is simply a license to kill the lumber trade of Canada. Those of us who have mills on the Georgian Bay must either close our mills and export our logs, or do business unprofitably. The duty of $2 per thousand feet is practically an exclusion of average sawn lumber. Under it the higher grades may be imported, but the coarser lumber could not be sold in the United

States market at a profit. I do not consider it necessary to enlarge on this aspect of the case. The next thing to be considered is, what is the remedy? One possible remedy is an export duty on saw logs, which would be applicable to the whole of Canada. There was another remedy, that contained in the resolution which I have submitted, and which affects only the province of Ontario. It is that the Ontario government so amend the regulations that timber cut on licensed lands should be manufactured in Canada. I was pleased to observe that at the sale of limits held yesterday the government had taken steps in this direction, and we ask them to do the same thing in regard to all licenses. If they do that, then we will be reserving to ourselves



ALD. SCOTT.

the industries of manufacturing the timber of Ontario in all its branches, and that is one thing which should commend itself to the reason of this meeting. Some say, let matters remain as they are; we may continue to export our saw logs. That is the most unpatriotic position we, as Canadians, could assume. Such an argument should only come from the other side of the line. If this Canada of ours is ever going to attain a high position we must take action under the present circumstances. Now is the time to assert ourselves. The United States duty is framed simply that the United States people may reap the benefit, to the detriment of Canadians. Our rights are threatened simply because we do what we have a right to do. If something is not done now the position year after year will grow worse. They are trying to cripple, grind and crush us as much as ever they can. The tariff has been designed with the object of crushing us, and the time has now come for Canadians to take the question of the disposal of our forests into their own hands. The Dingley bill is for the purpose of the contraction, restriction, and prohibition of our trade with the United States. I say, let us take a stand even if we have to do without trade. We are willing to trade with them on fair and even terms, there is no disposition on the part of Canadians to do otherwise, but we will have no jug-handled policy. Let us say, we are prepared to deal with you on reasonable terms. Now is the time to make our determination known, otherwise let us crawl quietly into some hole and hide ourselves."

Mr. Newman wished to know how that would operate with Americans holding limits in Canada, to which Ald. Scott replied that we would treat them all alike. The Americans should have no preference over Canadians in Canada. When they purchased limits they fully understood that the Ontario government had the right to amend the regulations.

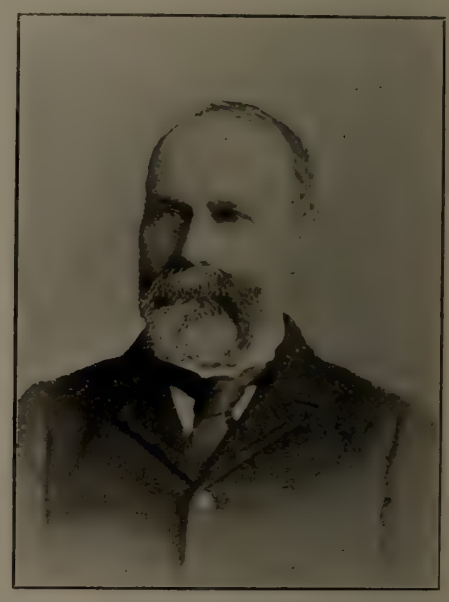
### VIEWS OF MR. BERTRAM.

The resolution was seconded by Mr. John Bertram. In doing so he said: "I do not consider it necessary to go into detail as to the policy of the country. When we were discussing what policy to pursue, it occurred to us there were two ways to meet the action taken by the United States government. It is necessary that our interests should be guarded in the closest manner. I admit that nothing should be put in the way of Americans obtaining the best results for their investments in Canada, but we cannot give them advantages over ourselves. The original duty on lumber entering the United States was $2. This was subsequently raised to $3, and remained at that figure until 1890, when an agreement was reached between Mr. Macdonald and Mr. Blaine that if Canada rescinded the export duty of $2 on logs, the import duty on lumber would be reduced to $1. This agreement has now been broken. Now, we in Canada propose to act in an honorable way. We can see the absolute right of the United States to make the duty whatever they like, but they have gone beyond that and had assumed to direct the action of the Canadian people. They said that if we imposed an export duty they would double the amount of the import lumber duty. This was in the nature of a penalty, and while it remains we are justified in giving them no logs at all. It was a domestic question which should be settled in the province of Ontario. Now, Canadians are not a captious people, they do not grasp at straws, but this is a pure matter of business which we should face. We cannot allow our business to be cornered. It was absurd that the people of the United States should come over here and take our timber to their country, and if we cut it here we are to be fined $2 per thousand feet. The resolution, instead of asking an export duty on logs from the Dominion government, asked that the provincial government require that the timber be sawn in Ontario. Personally, I like the American people, but do not like their legislation."

Concluding, Mr. Bertram said that the forests of Canada were raw material, and he believed the day was near at hand when we will consider whether we will allow any of our timber to be taken out of the country, as upon it depends a number of our industries. He thought we would shortly be able to commence a system of practical forestry and make use of every tree, large and small. He strongly urged the meeting to endorse the resolution, stating that the policy of acting through the Ontario government, rather than through the Dominion government, was given the preference in order that any feeling that Canada was retaliating might be allayed.

### THE RESOLUTION OPPOSED.

Mr. W. C. Edwards, M.P., of Ottawa, was the next speaker. Regarding the statement that the meeting would have much influence with the government, he remarked that it was largely representative of the Georgian Bay district, and did not voice the sentiment of the province. The Ottawa valley represented an important portion of the lumber business, and he was safe in saying that the resolution would be opposed by nearly every lumberman in that district. "The question," said Mr. Edwards, "is not a sectional one, and the Dominion government would not be influenced by the action of this meeting. It is a great question, affecting the country from Halifax to Vancouver, and grave consequences may follow the action of the government one way or the other. In my opinion the meeting is a mistake and ill-advised, and I regret that it has been called. I consider that the matter should rest for a while and not be hastily dealt with, and this is the opinion of the people of the Ottawa valley—not that I think the opinion of the valley ought to dominate, for its voice should only be in proportion to the importance of the district. I am opposed to every item of the resolution, not only as a matter of policy, but of principle. If I were to go over to the United States and buy property under certain conditions, I would regard it as a crime for them to say that I could not take it out of the country or dispose of it as I wished. The Americans had come to Canada and bid in good faith, and put money into the Ontario government treasury which would otherwise never have come, and it would be manifestly unfair if the government made any such restriction as the one proposed in the resolution. Then, at the next meeting of Congress some provision would be made to offset this action. I am a Canadian in sentiment, but this is restriction that will strike a deadly blow to



MR. JOHN WALDIE.

Canada. I regret as much as any one that the $2 duty has been imposed, but let us carry out the policy of retaliation proposed and what would be the result? Why, we would not manufacture any cotton in Canada. This clause is not directed against Canada any more than any other country."

"Would you kindly tell us," interrupted Ald. Scott, "from what other country the United States recieves logs."

"I made no such remark," retorted Mr. Edwards, "I simply said Canada was not particularly discriminated against. I think the United States made a mistake. We must look at the effect of an export duty. If the Ontario govern-

ment is allowed to do the dishonorable act Canada will be placed in a bad position."

At this juncture Ald. Scott stated that the speaker was going away from the resolution, to which Mr. Edwards replied that if he were not allowed to talk he would withdraw. This he did, with the understanding that at a later period the export duty would be discussed.

The chairman took exception to the word "dishonorable," as used by Mr. Edwards, when the latter most willingly withdrew it.

Then followed Dr. Spohn in support of the resolution. "In discussing this question," he said, "we must take into consideration the interests of the people. All will admit that the greatest benefit is derived from the manufacturing of the lumber and from permanent citizens. The men who take out the logs are a floating population, here to-day and gone to-morrow. The raw material is the property of the people, and we should obtain every possible benefit from it, instead of having the trees taken to Michigan to be manufactured and the stumps left in Canada. I claim that the Ontario government should make such restrictions as would compel the manufacture of our timber to be done in this country. Mr. Edwards appealed too much to sentiment. The United States people bought the limits with their eyes open, and the Ontario government is free to make any change they may see fit in the interests of the country. Mr. Peters, of Parry Sound, sent twenty million feet of lumber to the United States last year, and if the Ontario government complied with the resolution Mr. Peters says he is prepared to cut the lumber in Canada. The American lumbermen owning mills in Canada are not in favor of the Dingley policy. Such legislation is calculated to ruin towns and villages. Ontario wants to anchor her people down in thriving villages, and the proposal of Ald. Scott is calculated to do so."

COMPARISON OF FREIGHT RATES.

Mr. Edwards asked Dr. Spohn how much lumber was cut annually in Ontario outside of the Ottawa valley.

The exact amount Dr. Spohn could not say, but he compared the poor lumberman of the Georgian Bay with his more fortunate friend in the Ottawa valley. "We are handicapped by freight rates to the extent of from one to two dollars," said the doctor, "and we have to pay higher prices for our timber limits owing to the competition from the Americans."

Mr. Edwards: "As to freight rates to Quebec we are in a better position, but it costs twice as much to take out timber in the Ottawa valley as in the Georgian Bay district."

(Voices): "No, not that much."

Mr. Scott: "As Mr. Edwards referred to the question of freight rates, I would like to ask him what the freight is from Ottawa to New York by way of Albany."

Mr. Edwards: "The freight from the Ottawa valley to New York, via the Canada Atlantic Railway, is, I think, three dollars. We can ship by boat in summer time for $2.50, and if by all rail one dollar extra."

Ald. Scott: "The lowest freight rate from the Georgian Bay to New York by way of Albany is four dollars, and by Buffalo and Tonawanda five dollars. That is the advantage the eastern manufacturers have over those on the Georgian Bay."

Mr. John Waldie then rose to his feet. He pronounced himself as being strongly in favor of the resolution, which, he said, was not an exceptional one. The timber was a product which could not be reproduced. With regard to the Ontario government taking such an action as was proposed, it was nothing more than had been adopted in British Columbia and by the Dominion government with respect to the Northwest, where the purchasers of property were compelled to establish a mill. "Our friends from the Ottawa valley," said Mr. Waldie, "are exceptionally located. As Canadians surely we are not going to allow the Americans to take away the timber from the Georgian Bay without saying a word. The new tariff was simply a bonus to Americans. Are we going to submit that the Washington government shall grant a bonus of two dollars per thousand feet to take all the timber from the Georgian Bay to Michigan. If that is the situation, then I will be compelled to close my mill and send my logs to Michigan. Necessity will compel me to do so to meet my liabilities. Why, in five years' time I believe the United States people would sweep the whole north shore. We are therefore threatened with extinction by the Dingley bill, and the provincial government have a right to legislate in our behalf. We are prepared to stand the consequences. It will result in a curtailment of production, which will ultimately be beneficial; we are getting rid of our timber too quickly. The Americans come in here, buy up limits, and set to work to clear them off in about two years. They have no further interests here, and I claim it is not such men British law was designed to protect. The men supporting the resolution before the meeting are men whose interests are in Canada, men who are paying taxes, whose families live here, and it is the duty of the government to give them British justice. The resolution submitted is preferable to an export duty, which might injure the pulp industry and in certain districts deprive some of their means of support. A comparison has been made by one of the speakers to the cotton industry. Such a comparison is, I think, unfair, because the timber is the growth of a lifetime." Mr. Waldie concluded with the remark that he was in favor of Ontario manufacturing Ontario timber, and was heartily applauded.

Mr. E. W. Rathbun.

MR. CHARLTON URGES DELAY.

An opponent of the resolution was next heard, in the person of Mr. John Charlton, M. P., who said he thought the Dingley bill a most outrageous measure. "If only my feelings were concerned," continued Mr. Charlton, "I would only be too glad to give a Roland for an Oliver. But we must consult our interests. The question is a business question to be dealt with upon broad principles, so as not to result injurious to ourselves. The provisions in the Dingley Bill with regard to lumber naturally awakens sentiment in Canada; it is an action for which we are not responsible. I am told that I am the champion of American interests. I wish to say that I am not; I have no saw mill in the United States; nine-tenths of my holdings of timber limits are in the Ottawa Valley. My interests are therefore identical with those of the other gentlemen present. The difference is simply a divergence of opinion. The proposal before the meeting is intended as a flank movement to arrive at the results of an export duty without incurring the penalty. I say, gentlemen, that the two propositions aim at the same result, and will be construed as such by the United States government. The Ontario government have no right to impose such a restriction upon the timber lands except at the time of sale. Those men who bought lands on the understanding that they should tow logs from Canada at their pleasure have rights which the country is bound to observe. There is doubt, too, as to what the United States might do in the case of an export duty being imposed by Canada. I think the export duty preferable to the resolution before the meeting. If Canada prohibited the exportation of logs, the United States might prohibit the importation of lumber."

"Let them do it!" was heard from all round the room.

"Then," Mr. Charlton continued, "the towing of logs has not been found satisfactory. The firm of Holland, Graves & Montgomery found that the loss in towing was about 20 per cent. Mr. Peters has removed to Canada; a mill is being removed to Byng Inlet, and another one to St. Johns Island, all on account of the cost of towing logs across the lake. Then, at the Ontario government sale in 1892, over a quarter of a million dollars was realized for 600 square miles of timber limits—a most extraordinary price—and the Americans purchasing them expected to be allowed to enjoy the property they secured. Before taking any action it would well to enquire what the result would be. It is a question if the American government cannot impose the additional duty the moment such action as recommended is taken by the Ontario government. There is a moral certainty that our position will be as bad as if we imposed an export duty. I would prefer the latter, then we would know what the action of the Congress would be."

"What have we to do with what Congress does?" was asked.

"Will it not affect our interests," asked Mr. Charlton, "if Congress says that in view of Canada's action lumber cannot be imported to

the United States; what position would this country be placed in? I would strongly urge that action be deferred until the next meeting of Congress in December, to see if we cannot get a rearrangement and modification of the tariff. This step has never been taken, but I have reason to believe it would be successful. When the Dingley bill was being considered, I made an effort to have the duty kept down to one dollar, but the Dominion government refused to make the requisition. The proposal to re-enact the McKinley bill has never been made. The wood schedule was not considered on its own footing. It was a question whether the Dingley bill should stand or fall, and consequently it received the support of some who were opposed to the duty on lumber. If the lumbermen of this country would prefer to have a one dollar duty and no export duty, the course which I suggest should be pursued. Can we not afford to wait a few months, and endeavor to get as near as possible what we want? If the matter is left in status quo, I believe an arrangement can be made."

Mr. Charlton then submitted an amendment to the resolution, which, as it was finally altered, read as follows:

"Resolved, That, in the opinion of this meeting, action upon the question of imposing export duties or of prohibiting the export of sawlogs should be deferred until after the next meeting of the American Congress, in view of the possibility of receiving a more satisfactory adjustment of the American lumber duties."

Mr. E. W. Rathbun, of Deseronto, followed as an advocate of the original resolution. The question was one, he said, involving great difficulties, and the first impulse was to retaliate. It was probable that they would be charged with adopting retaliatory measures, and it was unfortunate that the word "retaliation" should have been brought into the discussion. It first appeared, however, in the lumber clause of the Dingley Bill, and some action was therefore necessary. Mr. Rathbun continued: "Mr. Charlton states that he does not own a saw mill in the United States. If this is correct I owe him an apology, as I have always understood that the firm of J. & T. Charlton, of Tonawanda, represented Mr. John Charlton, and also that that gentleman had interests in the state of Michigan."

Mr. Charlton: "I never had a saw mill; I have only a tug; it is a Canadian tug, and we are willing to do business wherever we can get it. I am a Canadian lumberman, and own no mills in the United States."

### FOREST PROTECTION ADVOCATED.

Mr. Rathbun: "I thought Mr. Charlton's considerations would have been in favor of exporting logs to the United States. Looking at the question of timber supply, we have in this country probably forty billion feet of timber. This is being reduced at the rate of 1¼ billions annually. We therefore have no more than will be required for the industries of our own country. It is only a question of a little time when we will not have sufficient timber for our own purposes, and for the proper protection of our water courses. Have we any pine to spare that will not be required for our own industrial interests?" asked Mr. Rathbun. He thought the provincial government had a perfect right to impose the export duty, which was not retaliation, but simply a return to a principle which was temporarily abandoned some years ago when the lumber duty was reduced to one dollar per thousand feet. He did not think Mr. Charlton's statement that we could obtain a one dollar duty from Congress was correct. This was an opportune time to act, as the western states were now in a very prosperous condition. There was a wonderful consumption of lumber in Nebraska and other western states, and this would continue to increase. The effect would be that increased prices would follow, and this would be attributed to the imposition of a duty on lumber. This would be followed by an agitation by consumers to have the duty repealed. There was a clause in the Dingley bill providing that the governments of the two countries could meet and reduce the duty to a certain extent, but he had very little consolation in looking to Washington for help, and hence was driven to the conclusion that some steps should be taken by the provincial authorities. Lumbermen who had good pine could still market it in the United States and make a profit, but the two dollar duty practically marked down as worthless 25 per cent. of the timber of Canada. This would have the result of increasing the fire risk, inasmuch as the poorer timber would be left standing in the woods. At every point where there is a saw mill, the workmen were encouraged to build homes, towns and villages spring up, and the municipalities spend money to facilitate the exchange of traffic. He considered it unjust that all such investments should be practically wiped out by the imposition of a duty by the United States government. The United States had not more than seven years' supply of white pine timber, and he estimated that under the present conditions our 40,000,000,000 feet of timber would be wiped out of existence in twenty years. Referring to freight rates, Mr. Rathbun stated that the rate from Ottawa to New York was little more than one-half that from the Georgian Bay district to the same point, while lumber could be laid down at Montreal at about one-quarter the cost. This he asked the Ottawa lumbermen to consider carefully. At the government sale of 1892 he had urged that the same conditions be included in the regulations as those which were adopted by the Ontario government in their recent sale of limits, and in this he solicited the assistance of the banks and railway companies. They, however, did not interest themselves in the matter, and he was unable to influence the government to take any action. He was confronted with the fear that the restriction asked for in the resolution would not affect the licenses dated 1st of May last, and could not become operative until the 1st of May, 1898. This winter there would probably be taken from the Georgian Bay district 750,000,000 feet of logs, and he regretted that some restriction could not be put on to prevent this being done. It was said that the Georgian Bay district did not manufacture as much lumber as the Ottawa valley, but he wished to point out that much of the timber which was now taken to the Ottawa mills should properly be manufactured in the Georgian Bay district. The timber was the foundation of so many industries that it should be kept in Canada for manufacturing purposes. The United States were actuated entirely by their own interests, as evidenced by their bonding act. In conclusion, he argued that some steps should be taken to protect the settlers.

Adjournment was then announced for lunch.

### AFTERNOON SESSION.

Upon resuming the debate at 2.30 p. m., the first speaker was Mr. C. Beck, of Penetanguishene, who stated that it was a question with him whether his mills on the Georgian Bay should be operated or closed down, as under the present conditions it was impossible to operate them at a profit. The firms that had removed from Michigan to the Georgian Bay were sorry for it, and unless some steps were taken they would probably be removed back again. He referred to the advantageous position of the Ottawa lumbermen; they had an advantage over the Georgian Bay people of from two to three dollars in freight, and over Michigan manufacturers of one dollar or more. Manufacturers on the Georgian Bay were debarred from the British market by high freight rates. The Ottawa manufacturers could ship the coarser grades in spite of the two dollar duty. He did not agree with Mr. Edwards that the meeting was a mistake, as the lumbermen had a perfect right to meet together and discuss questions affecting the trade. The lumbermen stood isolated; they had no association. It was his proposition to have the meeting called to endeavor to form an association, which would be a factor in improving their position. He pointed out that the towing of logs from his limits to the mill cost him almost as much as it cost the Michigan manufacturers to tow their logs across to Michigan. Further, the Ottawa manufacturers had not paid as high prices for their limits. In reply to Mr. Edwards' question, he stated that the annual capacity of the Georgian Bay mills was about 400,000,000 feet. There were exported to the United States yearly probably 300,000,000 feet of logs. He thought the adoption of the restriction submitted in the resolution would, in the long run, be the making of Canada, as the natural resources of the country should be manufactured here. There was a clause in the Dingley bill that if American labor was employed in manufacturing, the lumber might be imported into the United States free of duty. This, in his opinion, was a gross injustice. More lumber was exported from the United States than Canada exports, and he could not understand why we should not handle our own trade. He knew a large box factory at Tonawanda that obtained most of its lumber from Canada, all of which was exported to South America. We should endeavor to seek new markets, and not be subject to the tariff changes of the United States every three or four years.

Mr. Charlton: "A practical action would be to impose an import duty on American lumber. I have already urged this, but was told by Mr. Fielding that there was strong opposition to such a duty in the Northwest. I learned the other day that a large bill at Quebec was being filled by Southern lumber. I would suggest that the meeting petition the government to impose a duty equal to that levied by the Americans on Canadian lumber."

### THE OPPOSITION AGAIN HEARD.

Mr. A. H. Campbell, jr., seconded Mr. Charlton's amendment. In doing so he said: "I understood that this was a lumbermen's meeting, and I think we should look at the question from a lumberman's point of view. Statistics show that Canada does not supply sufficient lumber to the United States to enable us to dictate in the slightest degree as to how that country should arrange her tariff. We supply, including logs, about 3½ per cent. of the total lumber trade of the United States—only a drop in the bucket. So far as the United States politicians are concerned, I feel satisfied they will look upon the restriction proposed by Ald Scott's resolution as the same as an export duty. There is no doubt but that the tariff has hit the lumbermen hard, but the only remedy proposed is an export duty on logs, and no one has shown that any benefit would result to lumbermen if this were done. Some of the speakers said that they could not manufacture lumber in this country under a duty of $2 a thousand. How, then, could they expect to manufacture it if the United States imposed a duty of $4 or $5, as they threaten to do in case of Canadian retaliation. Now, we should consider what the loss would be if an export duty were imposed. We cannot manufacture for a market under a four or five dollar duty, and in the event of stringency, fire, etc., we could not even sell our logs to the United States. Look to the farmer for an example. When the McKinley bill was passed the farmers were shut out of the United States market. What did they do? They went to work to seek new markets, and have found them to-day. This is exactly what the lumbermen must do. We lumbermen on the Georgian Bay have to awaken to the fact that an earthquake like the McKinley bill may come at any time, and that the United States is not our market. We must find some more stable market for our lumber, but in the meantime why not keep our little trade with the United States? To do otherwise would be suicidal policy."

Mr. A. E. Dyment, of Thessalon, strongly opposed the original resolution. As a limit holder and manufacturer, his first impulse upon reading the Dingley bill was to retaliate. He felt satisfied the resolution, if acted upon, would cause an additional import duty. Because we take a flank movement to overcome the difficulty, they were not going to submit to it. For the sake of national honor, he hoped that no such action as proposed would be taken. The Americans had invested millions of dollars in Canada, many of them to their sorrow, and had paid two, yes, three prices for their limits. Now they proposed preventing these people from doing what they liked with their own property. No argument had been shown as to how the lumbermen would be benefitted by the resolution. He favored Mr. Charlton's amendment.

Mr. Edwards pronounced himself as an out-and-out free trader. With him it was a matter of principle. "If," said Mr. Edwards, "I were personally to suffer by it, I would still favor Americans manufacturing Canadian logs if they could supply the people of this country with cheaper lumber than Canadian mills. I am opposed to an export duty under any circumstances. The Canadian export duty on logs cannot do any good unless it is to remove the import duty on lumber. True, the forests are a great asset to each province, but much more timber has been destroyed by fire than ever was cut by the lumberman's axe. American manufacturers would hail with delight a $4 instead of a $2 duty. Canada exports annually 700,000,000 feet of lumber to the United States, and the result of a higher duty would be the shutting down of Canadian mills, the ruination of the wholesale trade,

and disaster to the business of the whole country. Is it desirable that the lumber trade should cease? It certainly would as a result of the resolution, as in less than six months the British market would be overloaded and collapse. The import duty was not imposed as a blow at Canada; it was imposed because the industries there clamored for it. An export duty would not build up villages, but kill them. I live in a village of 3,000 people which is almost entirely dependent upon the lumber business, and it would be destroyed by an export duty. Instead of the two dollar duty being a detriment to Canada, it will be a benefit. We are cutting our forests altogether too fast. In the United States some white pine still exists, and just as long as it can be obtained it will be preferred. Let the Americans go ahead and exhaust their supply, and then we will come in and make money. In the Ottawa valley fewer logs will be taken out this winter than heretofore. I think we should be compelled to curtail our production. That is my position, and I would take the same stand in the House of Commons even if it were to defeat the government." Referring to the proposal for an export duty on pulpwood, he said the United States would take exactly the same action in this case as in the case of timber, and the people who would be injured would be the farmers. He desired to see many pulp mills in Canada, but until they were built he was opposed to placing a duty on the material, which would circumscribe the supply and raise the price to the farmer.

Mr. Brennan followed. He did not believe the restriction would be an injustice to American holders of timber limits. Previous to 1892 there had been an export duty on logs, and it was removed by arrangement between the two governments. Now we were justified in putting on the duty, as the United States had taken the iniative and broken the agreement. If no action was taken, manufacturing would be diverted to Michigan. Were we not, therefore, in danger of losing our own citizens?

Here Mr. Beck jocularly suggested that the government compensate the Georgian Bay manufacturers for their loss and tax the Ottawa people a corresponding amount.

Mr. Lovering was pleased with the first resolution. The question was one of the most important that had ever come up in the province. He asked the sympathy of his Ottawa friends, who, he said, were in a favorable position to cater to the foreign market.

Mr. Edwards: "Not one-third of the timber will make deals for the British market."

### MR. LOVERING SPEAKS.

Mr. Lovering, continuing, said he considered the Georgian Bay interests of more importance to the country than those of the Ottawa valley. He thought he could speak from a provincial standpoint. Look what the lumbering trade means to Owen Sound, Penetang, Collingwood, Midland, Victoria Harbor, Waubaushene, Orillia, Peterboro', Gravenhurst, Huntsville, Burks Falls, and dozens of other towns. Their interests were completely wrapped up in the lumber business. He believed if the government had taken action last summer, and said, "we will put on dollar for dollar," the United States duty, instead of being two dollars, would have been one dollar. If the Ontario government placed restrictions on the exportation of logs, they could go to Congress and offer something tangible, but if they did not, Congress would rightly think that they were only bluffing. He pointed out that the duty was on Canadian labor, and not on Canadian lumber. The United States were quite willing to admit Canadian timber, but if any labor is put upon it in the shape of manufacturing it into lumber, then it is subject to the duty. The tax is therefore not on the lumber, but on the labor. The wisest thing they could do was to protect the forests. Why, he asked, should Canadians strip their woods for the Michigan mills and the Canadian mills be allowed to stand there and rot? Nor, he said, will the Ottawa valley escape. Just as soon as the Americans have finished with the Georgian Bay, they will cross the divide, and then the Ottawa men will rue the day they opposed making restrictions.

Mr. Lovering, upon retiring, was greeted with loud applause.

Mr. Charlton: "There has been much discussion apart from the motion before the meeting. I have said nothing for or against an export duty. My resolution merely affirms that it would be judicious to defer action until Congress assembles. The real opinion of Congress has never been obtained on this question. I may take this meeting so far into my confidence as to say that Messrs. Alliston and Aldrich, two members of the Committee of Congress, informed me privately that they did not sanction the duty on lumber, but that no objection had been made to it through fear of endangering the whole bill in which it was incorporated. It is a mistake to imperil our chances by passing the resolution before the meeting. If the proposal of Messrs. Scott and Bertram becomes law, Mr. Lovering will see only 500,000 feet of lumber cut in the Georgian Bay district within 18 months."

Mr. Lovering: "I would rather see it in 18 months than in five years, when the Americans would have taken away all our timber."

Mr. Newman, of Wiarton, urged the chairman to proceed with business as rapidly as possible, as several of those present desired an opportunity of voting on the question and had only a short time to remain.

Before taking the vote on the question, Messrs. Scott and Bertram, as mover and seconder of the resolution, were heard.

"Mr. Charlton has made a piteous appeal to defer action," said Ald. Scott, "but the appeal came from the other side of the line. His sentiments are not those of a true Canadian lumberman. He asks that we defer simply that we may ask the United States to take us into their pitiful consideration. The Michigan lumbermen had placed the whole question before Congress, and the result

MR. A. H. CAMPBELL, SR.,
President Ontario Association of Lumbermen.

was the $2 tariff. If Congress could do nothing then, I see no reason why they should now. I believe that delay would be only prejudicial. The United States would think we were afraid, and every day we wait our case is prejudiced."

Mr. Scott said he felt aggrieved at the manner in which Mr. Charlton had treated himself and some others, and he thought he (Mr. Charlton) owed them an apology. He explained that at a conference of some of the Georgian Bay lumbermen at the Rossin house, Mr. Charlton admitted that we were entitled to free lumber for free logs, but if they could not get this they would concentrate their efforts to keeping the duty down to one dollar. They were all pledged to strict secrecy, but Mr. Charlton, in an interview with an Ottawa newspaper man, stated that Canadian lumbermen were willing to submit to a one dollar duty. This Mr. Scott characterized as a breach of trust, as nothing, he said, could have transpired between Saturday and Monday to convince Mr. Charlton that free lumber was an impossibility.

Mr. Charlton undertook to reply in a somewhat roundabout manner, reverting to the advantages which he claimed to have secured some years ago for the lumbermen of Canada.

The Chairman: "That is not answering the question. You must confine your remarks to the answer."

Mr. Charlton: "These points have a direct bearing upon the question, and I claim the right to so answer the question as to place myself properly before the meeting." Continuing, he said: "At the Rossin House I admitted that Canada was entitled to free lumber, but said that I did not believe we could get it, and advised concentrating our efforts to secure the one dollar duty. At Ottawa I met some lumbermen and a reporter, and discussed the lumber question, giving it as my opinion that the one dollar duty would be generally accepted. The reporter took the liberty of publishing a private conversation."

Mr. Charlton referred to his efforts at Washington to obtain free lumber, but he was again reminded by the chair that this was away from the question, and retired with the remark that he wished the meeting to understand that he was not permitted to reply to the attack as he desired.

Mr. Scott continued the debate. With reference to the argument that had been used, that by imposing the restrictions they would be breaking faith with the American purchasers of claims, he referred to the fact that when the limits were purchased the question of an export duty was prominently before the country, and the purchasers were fully aware of the restrictions which might be adopted. He characterized Mr. Campbell's illustration with regard to wheat as inapplicable to the present case. The United States was not a market for wheat, and there was not the slightest analogy between the two cases.

Mr. Bertram, seconder of the motion, stated that Messrs. Edwards and Charlton asked them simply to do nothing. In place of going to Washington, we should legislate for ourselves. He cut logs in Michigan last year and is also cutting some this season, but as a Canadian he was prepared to stand the consequences of the resolution and allow the pine to stand in the woods, if need be. It was quite within the jurisdiction of the Ontario government to take the step asked, as in 1885 the government dues were raised from 75 cents to one dollar—a similar action. "Let us assert our manhood. We think we are right, and as Canadians and British subjects, let us give our opinions regardless of the United States," concluded Mr. Bertram.

This ended the discussion, and the chairman announced that the vote would be taken on Mr. Charlton's amendment. The result was 11 for and 50 against.

The original resolution submitted by Ald. Scott was then put and adopted, the vote being 48 for and 11 against. On motion of Ald. Scott, seconded by Dr. Spohn, a committee, composed of Messrs. Bertram, Rathbun, Waldie and Scott, was appointed to wait on the Ontario government and present the resolution.

### ONTARIO LUMBERMEN'S ASSOCIATION.

Mr. Rathbun moved that steps be taken to form an Association of Lumbermen for Ontario.

Mr. J. B. Miller stated that such an association already existed.

"Has it not gone out of existence?" was asked.

Mr. Miller: "I think not; there are yet some funds in the treasury. Mr. A. H. Campbell, sr., is president, and myself secretary."

Mr. Newman inquired if the hardwood lumbermen were included in the association. He thought their interests should be guarded. They were now suffering from unfair treatment by the railway companies in the matter of freight rates.

Mr. Scott replied that they would become a section of the association in the future. He urged that the association be revived into renewed activity, and asked all present to become members.

Dr. Spohn moved, seconded by Mr. Charlton, that the Dominion government be requested to impose an import duty on lumber coming into Canada equal in amount to the United States import duty. This was carried by a vote of 35 for and 5 against.

Votes of thanks were then tendered the chairman, secretary and the Board of Trade, which brought the meeting to a close.

---

A Chicago lumber firm is said to have made a heroic effort to save $6,000 duty on imported lumber on Saturday, July 24th. The firm had 1,750,000 feet on board of several steamers, and telephoned to Milwaukee to send out the tug Starke and bring the captains with their manifest to the city. Here a special train took the captains to Chicago, where the manifests were filed that night. The tariff law, however, went into effect on Friday night, and the trick therefore failed.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## THE RECENT SALE OF TIMBER LIMITS.

IN some respects the result of the sale of timber limits held by the Ontario government on the 18th ultimo came in the nature of a surprise. Much of the timber was located in gold-bearing districts, and the fear of destruction by fire, together with the agitation of miners that the property be opened for disposal under the Mines Act, influenced the government in their decision to place the limits on the market. The prices realized, when the extent and class of timber is considered, were, we believe, as great as was expected. The limits in the Rainy River district which were withdrawn consisted largely of local timber, and were not particularly valuable.

For one limit the sum of $6,600 per mile was realized. At the government sale in 1887 the highest price paid per mile was $6,350, but at the sale in 1892 the Gilmour Company, of Trenton, paid $17,500 per mile for a limit. It is freely admitted, however, that this figure was beyond the commercial value of the timber, and left no margin of profit in manufacturing the same into lumber.

Before the limits were offered for competition the announcement was made that a condition of the sale would be that all the timber on the limits must be manufactured in Canada—a provision which many thought would affect the result of the sale. There was also the United States duty of two dollars on lumber to be taken into consideration, rendering the probabilities of obtaining even fair prices extremely doubtful. But in the face of these adverse circumstances the lumbermen gathered in large numbers, and showed in no uncertain manner their undoubted faith in Canada and Canadian timber limits. It would seem that notwithstanding years of depression lumbermen have lost none of their courage, but are constantly on the look-out for investment.

## THE LUMBER SITUATION DISCUSSED.

THE meeting of lumbermen held in Toronto a fortnight ago, a report of which is given elsewhere, was to a large extent representative of the Georgian Bay interests. The Ottawa Valley and other sections of the province were but poorly represented—a fact which lessened the importance of the meeting. It could scarcely be called a provincial gathering, although such was, we believe, the intention of the promoters. The chief question considered, that of requesting the Ontario government to restrict the manufacture of pine timber to the province, found many advocates, but was not without strong opposition. Able arguments, both pro and con, were presented.

The Georgian Bay lumbermen were almost unanimous in favor of the resolution for restriction. That the United States people should be given the preference over Canadians in Canada seemed to them most unfair. This point was well taken. The prosperity of the country demands that some action be taken to protect our forests, otherwise mills and villages will be wiped out of existence, and population transferred from Canada to the United States. It is said that many of the lumbermen could dispose of their logs at Michigan points at a figure that would bring better returns than if they were manufactured into lumber, but having the welfare of the country at heart, they prefer to cut only a limited amount each year, and thereby extend the supply of timber over a greater period of time.

It is worthy of note, and a point which should carry weight with the government, that, although the lumbermen on the shore of the Georgian Bay are in a most unfavorable position to cater to foreign trade, yet they pronounced themselves as willing to bear the consequences of an export duty on logs, following which would be an additional import duty on lumber shipped to the United States.

It is claimed by some that in a short time the price of lumber in the United States will advance to the amount of the duty, and that we will then be in as good a position as we were before the imposition of the duty. This may be true, but the manufacturer on the other side still has an advantage over the Canadian manufacturer of two dollars per thousand feet.

Mr. Edwards, as representing in a measure the Ottawa valley, strongly opposed the resolution. He is apparently willing to submit to any legislation which the United States Congress may exact. The Ottawa valley has of late years become less dependent upon the United States market, owing to the expansion of British trade. Not only are large quantities of deals shipped to Great Britain, but inch lumber of common grade is now finding a market in that country. It would appear that Mr. Edwards' opposition is founded on the fear that the closing of the American market would result in the overstocking of the British market, attended by a collapse in prices.

The key-note of Mr. Charlton's deliberations was delay, in the hope of securing a re-consideration of the wood schedule of the bill when the United States Congress shall meet in December. The lumbermen of this country would probably not agree to anything less than free lumber for free logs, and it is scarcely reasonable to expect that this could be obtained under the present administration.

The proposal of Mr. Bertram contained in the resolution meets with general approval, as being likely to solve the question in a satisfactory manner. The Ontario Government reserves the right to make such regulations governing the cutting of timber as may be deemed advisable, and can, in good faith, take the step asked. The time has come when we must legislate for ourselves. For years we have been subject to the changes and uncertainties of the American tariff, and are to-day in no better position than ten years ago. Should an export duty be imposed by the Dominion government the immediate consequences would no doubt be keenly felt in some quarters—the value of timber limits would probably be depreciated; but in a very short time, as new markets were found, this and other drawbacks would pass away.

The apparent ignorance among the trade that a lumbermen's association existed in Ontario did not speak well for the organization. As pointed out by Mr. Beck, the lumbermen stand isolated; there is a lack of cohesion among the persons engaged in the manufacture of forest products. It is hoped that the decision of this meeting to revive the association into greater activity will not be the end of the matter, but that steps will be taken at once to make its influence felt.

There is abundance of work for an association of this kind to do. The finding of new markets is a matter which might profitably be dealt with. Much valuable information could be obtained and placed at the disposal of the trade. The subject of freight rates is another question for consideration. Efforts should be made to obtain lower rates to ocean ports, which would place lumbermen in a better position to cater to foreign markets. Nor should the hardwood lumber trade be forgotten; it is an important branch of the industry. Let the association take action at once to secure from the railway companies a rate on hardwoods as low as that given for pine. By dealing in a vigorous manner with these and other questions affecting the prosperity of the trade its usefullness will be demonstrated.

## EDITORIAL NOTES.

THE space given to a report of the lumbermen's meeting accounts for the absence in this number of some of the regular departments. We believe, however, that all interested in any way in the manufacture of forest products will find a perusal of the report both interesting and instructive.

OWING to the failure of Messrs. McLachlin Bros., of Arnprior, to dispose of their timber limits, they are said to have decided to operate

them again this winter. The outcome of the sale, although not entirely unexpected, is in striking contrast with the result of the Ontario government sale held one week later, at which competition was keen and fair prices realized. Particularly is this the case when the situation of the limits is considered. Those of McLachlin Bros. are on waters adjacent to the Ottawa river, and favorably located for catering to the British market, while the government limits, situated in the north-west part of the province, are to a greater extent dependent upon the United States market. To the forethought of the government in dividing the limits into small blocks is due, we think, the success of the sale.

The development of mining properties in British Columbia and the Klondike is providing employment for a number of workmen, and consequently the country at large is certain to benefit. Of late years the number of workmen who sought employment in the lumber woods has been greatly beyond the demand, a condition which has to some extent regulated the price paid for labor. The wages of woodsmen last winter, particularly in Ontario, were lower than for many years past, and steps were taken to form a labor organization with the object of securing greater remuneration. What the situation will be this winter, in the face of the United States duty on lumber, it is difficult to say, but it would appear that there would be fewer persons dependent upon the lumber business for their livelihood. Late reports from the Ottawa district are to this effect. With the development of the vast farming and mineral resources of our western provinces, the congested condition of the labor market in Ontario promises to be relieved, and then, and only then, can workmen hope to secure a higher rate of wages.

## FORESTRY IN ONTARIO.

The second annual report issued by the present Clerk of Forestry, Mr. Thomas Southworth, sets forth the many advantages to be derived from systematic forestry in a very able manner. Owing to the appointment by the Ontario Government of a Royal Commission to report fully on the question of reforestation, and the fact that this commission is expected to present some practical scheme for the consideration of the Government, Mr. Southworth's report is not as comprehensive as would otherwise have been the case.

Attention is given to the question of forestry on the farm, and it is shown that by cultivating a crop of timber on a portion of the land, good financial results would shortly accrue. Again, thirty of the counties of the province have less than twenty-five per cent. of their total area under timber, and throughout the greater part of southern Ontario the percentage of forest has been reduced to far below that which should have been retained to ensure the perpetuation of these favorable conditions.

Competent judges of forest conditions in the United States, says Mr. Southworth, estimate that the supply of white pine in that country will not be adequate for their home consumption for many years to come at the present rate of cutting, while the fact that all or nearly all their white pine lands are held by private parties renders any attempt at reforestation by the state on any large scale out of the question. When this period arrives, when the United States has no more pine to export, the price of this wood will be considerably enhanced, rendering scientific forestry practice in Ontario not only possible but profitable. In countries where the price of lumber is much higher than here, a very expensively managed forestry system returns a handsome profit over all expenses. The net revenue to the state from the forests of Prussia is about $6,000,000 yearly, and this in spite of their limited area as compared with ours, and the expense of their forest administration, which reaches about $8,000,000 per annum.

The white pine is our timber tree of commerce and has no successful rival in its particular field. At the same time it should not be lost sight of that we have in large quantities other woods of great and increasing value. Aside from the white and black spruces, to which reference is made elsewhere in this report, there is a growing demand for many of our hardwoods, and in any plan of future forestry operations these must also be considered. Until recently most of our export in hardwoods has gone to the United States, through whose merchants, doubtless, much of it ultimately reached Great Britain and Europe. It is a matter of congratulation that our direct trade with Britain is steadily increasing in hardwoods and manufactures of wood generally. Because of its nearness our timber exporters have heretofore been at greater efforts to cultivate the United States market, making little effort to ship to Britain anything except square or waney timber and deals, to be manufactured by the British saw millers. Were our mill men better acquainted with the needs of the British market there is no doubt a very profitable trade could be done there in lines we have not been exporting to that market at all. Already a trade in furniture and a few other lines is developing between Canada and Britain, and the Bureau of Forestry is in receipt of frequent inquiries from Britain regarding ash, maple, birch and manufactures of wood of various kinds. There is no doubt the United States market has been at times a profitable one for our lumbermen, but in view of the great uncertainty attending it in consequence of the fluctuations of their customs tariff it would seem to be a wise policy to devote more attention to secure an extension of trade with Britain, which, when secured, may be relied upon.

Considerable quantities of some of our hardwoods are now going to Britain from Ontario. The latest inquiry received by the Bureau in this respect was through the Imperial Institute, London, from the carriage makers of Great Britain, for ash used in carriages. The wood they have so far used is the European ash, not grown here, but our white ash of second growth provides a good substitute and the price offered for it will make it a very profitable wood to grow. A mixed growth of deciduous and evergreen trees is much less liable to danger from fires than a pure evergreen forest and in a scheme of reforestation this needs to be kept in view, more particularly since, as above pointed out, our deciduous trees are likely soon to have a value considerably in excess of the present one.

Aside from the advantages of the protection of climate and water supply and the revenue to the province, there are other factors in this question of reforestation of the waste lands of the crown that are frequently overlooked. At our present rate of cutting, unless something is done in the way of restoring to a tree covered condition the non-tillable portion of the crown lands now lying waste, the lumber business and allied trades will become extinct for want of raw material. Just what this would mean to the people of the province is not generally understood. Besides the large mills cutting timber from crown lands there are over 1,500 other mills, large and small, in the province, employing a large number of men, furnishing the farmers with a local supply of lumber and affording a market for their mature and, sometimes it is to be feared, immature timber.

The volume of trade dependent on the products of the forest in this country is very large. Most of the industries are to some extent dependent upon the forest and its products, while many of them derive nearly the whole of their raw material from this source. According to the last Dominion census industries dependent directly upon the forest, exclusive of logging and the wood pulp industries, besides some minor industries, such as picture-frame making, had a capital invested in land, machinery and buildings of $18,073,000, employed 39,5000 people directly, with a wage roll of $11,810,000, and a yearly output of the value of $45,643,471. Besides the people directly employed in these industries a very large number are engaged in the woods, hauling freight, and in other ways derive their living wholly or in part from forest industries.

It is true many of these mills subsist upon the supplies drawn from the farmers' wood lots and are not dependent on the crown lands, but the unwise policy of farmers in clearing their farms of all or nearly all the timber upon them is likely to close many of them. Many saw mill men in correspondence with the Bureau of Forestry complain of their inability to get a sufficient quantity of logs from farmers to keep their mills running, and desire new locations where an adequate supply can be obtained. If the farmers worked their wood lots properly, and planted up some of their waste and poor pasture land to trees, the present supply of timber from this source would be constant. The decadence of this industry because of the want of timber would be a calamity to this country, and it is the duty of government so far as possible to prevent it. The investigation of forest conditions in Ontario, and also by the forestry departments in various states of the Union, has established the fact that it is quite possible here, as in Europe, to secure successive crops of our most valuable timber trees. It is satisfactory to note that when this fact was brought to the attention of the government measures were taken to ascertain how these crops could best be provided for.

Messrs. W. Brodie and A. Kirkwood have contributed papers to the report on "Eutomology" and "The Manufacture of Wood Charcoal" respectively.

Mr. Geo. Webster, of Creemore, has decided to purchase Beatty's old mill site at Parry Sound and erect thereon a mill next fall.

## MICHIGAN LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

MICHIGAN lumbermen who have had their faces turned towards Washington for the past six months, in the hope of keeping the lumber duty down to one dollar, are now anxiously watching the movements of the Canadian governments. There is fear evinced that the export of logs may be prohibited either by a duty or by some measure adopted by the Ontario legislature. A Bay City lumberman, now operating in Canada, says that he feels sure that Canada will put an export duty on logs, although he does not wish to be quoted. Other owners of standing timber say they will not operate in the woods this winter as they had intended to, but will wait until a more opportune time. They say their stumpage will not decrease in value, but on the contrary will increase, as the pine in the United States is depleted. One limit holder says he can afford to hold his pine ten or fifteen years, and feel certain that the import duty will then have been removed by the United States.

The anticipation that the lumber business would revive in Michigan as soon as the Dingley bill became law has not yet received any assurance. This is probably due to the heavy stock of Canadian lumber shipped in previous to the passing of the bill.

From a number of operators it is learned that they will take things easy during the coming winter. The cut of logs in Michigan and the Georgian Bay district will not be heavy, as there is no desire to add to the present accumulated stock of lumber.

The Central Lumber Co., of Saginaw, received a raft of logs lately which contained 5,000,000 feet.

Col. A. T. Bliss' Carrollton mill is closed down for the present. It will probably resnme later in the season.

SAGINAW, Mich., August 21, 1897.

## OTTAWA LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

### OPPOSED TO RETALIATION.

MOST of the lumbermen of the Ottawa Valley feel very strongly with regard to the action taken at the meeting in Toronto in respect to restricting the exports of saw logs. They argue that it will incur the same penalty as an export duty. The views of Messrs. Edwards and Crannell have already appeared in the daily press, and are said to be backed up by Mr. J. R. Booth and other large lumbermen. The end desired is to secure free lumber, and this will be accomplished much sooner, they think, by Canada taking no retaliatory action. It is expected to be brought about in this manner: The price of lumber in the United States has already advanced about 50 cents per thousand feet, and indications point to a further rise. This the consumer of lumber will attribute to the import duty, and a general demand will be made to have the duty repealed. There are some, however, who believe that this result will not occur.

### WAGES OF WOODSMEN.

The outlook for workmen dependent upon the lumber industry is anything but bright. J. R. Booth will operate in the woods this winter on much the same scale as last year, but all the other firms will likely curtail operations. The following is a comparative statement of last year's and this season's wages per month:

| | 1896 | 1897 |
|---|---|---|
| Head log cutters | $20 | $17 |
| Second log cutters | $19 | $16 |
| Teamsters | $20 | $16 |
| General hands | $15 to $18 | $12 to $15 |
| Road cutters | $14 to $16 | $10 to $12 |

Besides the reduction in wages, only about half as many hands will be employed as last year.

### PRESENTATION TO EX-CONSUL.

Hon. John B. Riley, ex-Consul for the United States at Ottawa, took his departure early in August for his home in Plattsburg. As an indication of friendship, prominent citizens assembled at the Rossin House on the evening of the 6th inst., and presented Mr. and Mrs. Riley with a magnificent cabinet of sterling silver table-ware. As a special present Mr. Riley received a gold-headed cane, and Mrs. Riley a superb three-stoned diamond ring. None regret the removal of Mr. Riley from Ottawa more than the lumbermen, who appreciate the courtesy with which he discharged the duties of his office.

### MCLACHLIN BROS.' SALE.

There were a number of lumbermen present at the Russell House on the 10th inst., when the extensive limits of McLachlin Bros. were offered for sale. Among them were noticed Messrs. Alex. Barnett, Braeside; John Gillies, Braeside; Alex. Fraser, Ottawa; William Mohr, Fitzroy; Andrew McCormick, Ottawa; Thomas Carpenter, Arnprior; Jas. Carswell, Renfrew; R. A. Graham, Pembroke; Joseph Gaudette, Arnprior; Joseph McKinnon, Whitney; Charles McDougall and Alex. McDougall, Arnprior; Patrick McGuire, Brudenell, and others. The first parcel offered was 573½ square miles on the North Kippewa and Lake Expanse, which reached $425, but was withdrawn. No satisfactory bid for the other parcels were received, and consequently the sale was cancelled. The owners will again operate the limits this winter.

### BITS OF LUMBER.

Fire in J. R. Booth's Opemicon limits recently resulted in slight damage.

The Ottawa Lumber Company are making great improvements in their mill at Calumet, including electric lights.

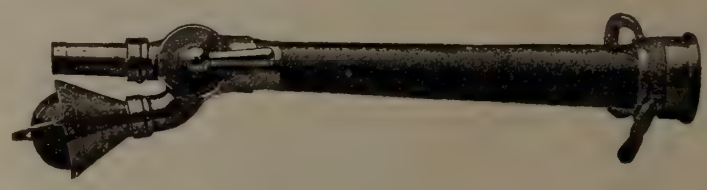
The proposal of the Ontario government that only Canadian workmen be employed in the lumber woods caused no anxiety among the lumbermen of the Ottawa valley. The men who work in the woods in this district are almost solely Canadians, and if the law should be passed, it would cause no change of arrangements by the lumbermen.

OTTAWA, Aug. 20, 1897.

## THE BALL NOZZLE.

WITH the exception of a practical and powerful spray which will drive smoke, cover a large area quickly, and quench the flame, the present equipment of fire departments would seem well nigh perfect. The ball nozzle furnishes such a spray, and so becomes, perhaps, the most important part of fire fighting apparatus.

The ball nozzle permits the flow of the same quantity of water from the hose as a straight nozzle without producing back pressure on the hose. A single man with one hand can manage it when it takes two or more men to manage a straight stream. It enables firemen to enter buildings in the face of flame and smoke, and to go with impunity to any part of a burning structure, fighting the fire at close range, covering the area quickly and effectively. In many cases the heavy straight stream does as much damage as the fire. The ball nozzle obviates this. Firemen arriving with the ball nozzle before the structure commences to fall can enter the building, pursue the course of the fire and



BALL FIRE NOZZLE.

master it, rescuing the people and saving property, and there are few cases when our gallant firemen are not on hand promptly and before fires have reached their most destructive stage.

The value of the ball nozzle for wetting property adjoining the burning building must be apparent to all. It is safe to say that it will accomplish as much as a half-dozen straight streams, and do so without material damage to buildings.

The ball nozzle is just as effective for chemical apparatus, probably more so, as it enables firemen to cover area quickly with less exhaustion of fluid.

When hotels and large buildings are equipped with the ball nozzle those inside can get out and those outside can enter burning structures. There being no back pressure, the ball nozzle may be easily managed by a woman or by a child of ordinary strength.

This apparatus is now in use by the government of Canada, Ontario and Manitoba, the Canadian Pacific Railway, Intercolonial Railway,

Montreal Street Railway, Bank of Montreal, Canadian Pacific Navigation Co., E. B. Eddy Co., and other large corporations. The Ball Nozzle Co., Limited, of Toronto, are the sole Canadian manufacturers.

## A SIMPLE FIRE EXTINGUISHER.

HAND grenades, the simplest form of fire extinguishers, can be made at home cheaply and easily. And it is well to have at hand a simple contrivance for extinguishing a small fire at its start.

Take 20 lbs. of common salt and 10 pounds of sal ammoniac (nitrate of ammonia, to be had of any druggist), and dissolve in seven gallons of water. Procure quart bottles of thin glass, such as are ordinarily used by druggists, and fill with this, corking tightly and sealing to prevent evaporation.

In case of fire throw so as to break in or near the flame. If the fire is in such a place as to prevent the bottle from breaking, as in wool or cotton, knock off the neck and scatter the contents. The breaking of the bottle liberates a certain amount of gas, and the heat of the fire generates more, thus working its own destruction.—Scientific American.

Mrs. McLachlin, mother of Messrs. H. F. and Claude McLachlin, lumbermen, of Arnprior, Ont., died at that place on the 10th of August.

NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the "Canada Lumberman."*

Toronto, Canada
C H. MORTIMER, Publisher
1895

THE above is a fac simile of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of four 3 cent Canadian postage stamps

THE CANADA LUMBERMAN,
*Toronto, Canada*

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.

LOG RUN, DRY PINE, BASSWOOD, ASH and Birch lumber. All cut full inch. JOHN EDGINGTON, Edgington P.O., Ont.

WANTED.

LUMBERMEN TO ADVERTISE IN THIS column stocks of lumber for sale. Probable purchasers look for this information. Address, CANADA LUMBERMAN, Toronto.

WANTED.

A CONTRACT OF CUTTING HARDWOOD or pine lumber at Parry Sound, on Georgian Bay. welve years' experience in cutting and grading timber. Apply to GEO. F. WEBSTER, Creemore, Ont.

SITUATION WANTED.

BY EXPERIENCED PINE AND HARDWOOD Lumberman, as Buyer, Salesman or Inspector. Satisfactory references; low salary. Address T. W. WALKER, 16 Beaconsfield Ave., Toronto.

## JUDICIAL SALE OF MILL PROPERTY

**Baldwin vs. Colclough.**

THERE WILL BE SOLD BY PUBLIC AUCtion at Sault Ste. Marie, Ontario, on the 25th of September, 1897, under the direction of the Court, the saw mill property known as "Moiles Mill," John's Island, Lake Huron, District of Algoma.

For further particulars apply to Stephen Baldwin, Detroit, Mich., John Moiles, Sault Ste. Marie, Mich., and Hearst & McKay, Sault Ste. Marie, Ontario, or

McFADDON & FARWELL,
Sault Ste. Marie, Ont., Plaintiff's Sol'rs.

Dated 13th Aug., 1897.

## MILL FOR SALE

SITUATED ON SALMON RIVER, VIC. CO., N. B., consisting of six Shingle Machines, Rotary Gang Edger, Lath Machine and Clapboard Machine. Water Power, with a never failing supply of water. Will cut the present season four million of deal, sixteen million of shingles and four million of lath.

There are 100,000 acres of timber land under lease, well stocked with cedar, spruce and hardwoods, to supply the mill with lumber. The mill property consists of 100 acres of land.

On the above property is a large store storehouses, boarding-house, blacksmith shop and a large stable. There are also six tenement houses. An electric light plant lights mill store blacksmith shop and stable.

This property is situated in the parish of Drummond Victoria county N.B. seven miles below Grand Falls., For further particulars enquire of

STEVENS LUMBER CO.,
Grand Falls, N.B., or Fort Fairfield, Maine.

### SHIPPING MATTERS.

The ship Charles S. Whitney will load deals at Liscomb for w. c. England at 43s. 6d.

A British schooner will carry lumber from Boston to Rosario at $8.25. A schooner, 309 tons, gets $5.30 on lumber from Annapolis, N.S., to Sagua.

### CURRENT TRADE CONDITIONS.

ONTARIO

The remark of a wholesale dealer that there is practically no trade aptly explains the situation of the lumber business in Ontario, so far as the United States market is concerned. There is a small local consumption of lumber, but even this is characterized by cautious buying. Looking at the general conditions of the country, we find the outlook for the lumber trade is not without some encouragement. The prosperity of the farmer can usually be taken as reflecting the position of the lumberman. When the farmer is prosperous, and receives good prices for his products, lumber is almost certain to sell at a fair figure. The recent advance in the price of wheat is regarded as an indication of the return to more prosperous times.

Some of the lumbermen have made their arrangements for operations in the woods this winter, although on a less extensive scale than heretofore. The necessity of the curtailment of the output seems to have become recognized, as until this step is taken better prices cannot be expected. In the Ottawa valley as much square timber will be manufactured this winter as last year, but the production of saw logs will be less.

QUEBEC AND NEW BRUNSWICK.

We are advised by our Quebec correspondent that there is no foundation for the report of advanced prices for square timber, as stated in the daily press. Birch still continues unsaleable in the British market, owing to over-production, and ash is also in much the same position. Pine, oak and elm are holding their own, and good stock finds ready sale, but the demand is not particularly brisk. The bulk of spruce and pine deal stocks have gone forward to the British market, and from this time forward shipping will be less active. Freight rates are very firm, owing to the tonnage required for wheat. Reports from the maritime provinces state that no new contracts are being entered into. Last week 14,000,000 feet of lumber was shipped to British ports from St. John on contract, and less than one million feet to the United States. There appears to be a strong feeling among the trade in favor of seeking markets in new fields, and thus becoming less dependent upon the United States.

MANITOBA AND BRITISH COLUMBIA.

The various branches of the lumber industry in British Columbia are running full force. The Northwest continues to provide an outlet for building lumber and bridge timber. Red cedar shingles are being shipped to the east, and prices are now more satisfactory than they have been for years. Throughout Manitoba and the Northwest the harvest is now well under way. The yield of wheat promises to be an average one, which with present prices will bring good returns to the producer. The feeling among the farmers is one of strong hope. These improved conditions will no doubt be followed by an expansion of the demand for lumber.

UNITED STATES.

There si said to be a rising tide of prosperity throughout the United States, induced to a large extent by the advance in the price of wheat and other farm products. The lumber trade has felt this influence perhaps less than other industries, but as the farmer obtains money for his crops new buildings and repairs to old ones will follow. In Nebraska this condition is already experienced. The northern pine markets have not yet shown any visible enlargement of demand. Everyone appears to be waiting for the fall trade to commence, when it is thought there will be such activity as will warrant higher prices. Manufacturers at the head of the lakes have taken the first steps in this direction. The Duluth market is in a very healthy condition, and prices are stiffening. Beyond a better feeling among the trade, no changes have as yet taken place in Michigan. Hardwood lumber is selling fairly well, and shingles are moving rapidly at an advance of 25 cents. Tonawanda buyers have recently purchased considerable log run stock at Menominee. Some increase of demand and distribution is reported from Buffalo, this being especially noticeable in hardwoods. The appearance of various building enterprises is an encouraging feature. White pine is moving more freely at Philadelphia, and the hardwood men speak encouragingly of prospects. The Boston market is featureless, apart from the demand for shingles which is characteristic of all the eastern states. The higher price and scarcity of red cedar shingles has resulted in dealers stocking up with the white pine variety.

FOREIGN.

Recent reports from Great Britain indicate that the markets are somewhat congested owing to the heavy shipments of all descriptions of wood goods which have been arriving both from the St. Lawrence and lower ports. Freights,

however, are now exceedingly stiff, and it is probable that from this out, for the balance of the season, shipments will be very much curtailed. This, it is hoped, will tend to revive the trade very shortly. The outlook generally, however, is hopeful. Another evidence of the favor with which Canadian goods is received is found in the remark of an English exchange, that the Scandinavian shippers are losing ground in Scotland, and that spruce is being bought instead. It is believed that if the same circumstances should prevail next year, Canadian spruce will be further patronised. The fact cannot be ignored that spruce prices on the west coast of England are depreciating. A drop of from 2s to 5s per standard has taken place, and late transactions of St. John spruce have been closed at £6 10s ex-quay. Several importers, in view of this condition, are storing goods, with the hope of steadying the market. There has also arrived an excessive quantity of St. John birch logs, which has been sold at auction at low prices.

## STOCKS AND PRICES.

### CANADA.

The barque Fram is now loading a cargo of deals, &c., at Hall's booms, Quebec.

The steamer Ursula Bright has left St. John for Manchester, with 1,545 standards of lumber.

The Hawkesbury Lumber Co.'s mills have lately been closed down on account of low water.

The brigantine Rapid sailed from Quebec for Ireland on the 19th inst., with a cargo of deals.

The steamship Teelin Head is at Indian cove, Quebec., taking timber and deals for Ireland.

Graham, Horne & Co., of Fort William, Ont., have just completed the sawing of 6,000,000 feet of logs at Duluth, Minn.

Messrs. Kidd & Morrow, of Wiarton, Ont., are sending gangs to the woods, and expect to commence cutting about September 1st.

The steamship Inneshowen Head arrived at Quebec from Montreal on the 19th inst., and went into Sillery cove to complete cargo for Ireland.

The steamship Emma, from Algiers, is in the Louise basin, Quebec, loading a cargo of deals, &c., on account of Messrs. H. R. Goodday & Co.

The steamship Longhurst and barque Winnifred are both loading cargoes of lumber at New Liverpool, Quebec, on account of the McArthur Bros. Co., Ltd.

The Quebec government offers for sale the spruce timber on the Rocmont Indian reserve, which contains fifteen square miles. The date limit is September 15th.

The bark St. Peter, with 540,000 feet of lumber, shipped by Clarke Bros., left Bear River, N. S., last week for Buenos Ayres. The schooner Dove, of Maitland, is now loading for St. Jago, Cuba.

J. W. Gorham & Co., Halifax, N.S., are offering for sale 100 miles of timber limits on the Restigouche river, in the provinces of Quebec and New Brunswick, together with mill and boom privileges.

The government of Quebec want tenders for timber and lumber required by the various canals during the coming fiscal year. Particulars may be obtained from Ernest Marceau, Montreal.

Lumsden's lot of Ottawa square and waney pine timber, together with a small parcel of Edward Moore's wood, recently arrived at Cap Rouge cove, Quebec. Both lots have been purchased by J. Burstall & Co.

The steamship Micmac has cleared from Pictou, N. S., for Glasgow with 650 tons birch timber, 100 standards birch deals, 107 standards pine deals, 100 standards hemlock deals and 500 standards spruce deals.

A raft of Klock Bros., Deux Rivieres, Ont., arrived at Cap Rouge cove, Quebec, on the 19th inst., and A. Barnet's raft, containing about 200,000 feet, was delivered at Cap Rouge on the 30th inst. These are about the last rafts of Ottawa timber to arrive this season.

The steamship British Trader arrived at Three Rivers, from Montreal, on the 17th instant, and shipped a deckload of deals at the Baptist Island anchorage. This is one of the Johnston Line boats, and goes to Liverpool.

A Sheet Harbor, N. S., letter says: The mills at this place will close down in a couple of weeks; the sawing season has been a short one, but very successful. There will be about 13,000,000 feet cut at East and West river combined.

The steamships Fitzclarence and Fitzpatrick are now in the port of Quebec (the former at Indian cove and the latter at Sillery cove), loading cargoes of lumber for U. K., for sundry shippers, the principal being McArthur Bros., W & J. Sharples, and Harold Kennedy.

The steamship Lammermoor left Quebec for Greenock on the 9th inst., with a full cargo of square timber, consigned by Dobell, Beckett & Co. The Bjorgvin left New Liverpool cove on the 14th inst., with a full cargo of timber and deals, shipped by the McArthur Bros. Co., Ltd.

The steamship Edenmoor, Captain Laurenson, left Sillery cove on the 9th inst., for Sunderland, with a large cargo of timber, consigned by Dobell, Beckett & Co. The Daybreak has also sailed from Sillery cove for Manchester, with a cargo of timber, consigned by Dobell, Beckett & Co.

Sir Donald Smith writes to the Minister of Trade and Commerce that almost all the streets of London, Eng., are paved with wooden blocks covered with a coating of asphalt. The wood is said to resemble Canadian pine, and he thinks lumbermen in this country could supply some of the material. A contract is now open from one of the London vestries, if any Canadian firm would care to take it up.

The Calvin Co.'s eighteenth raft for this season, from Garden Island, Ont., arrived in Quebec, notwithstanding the prevailing strong easterly wind, at two o'clock in the afternoon of Sunday, the 15th August, in tow of steamer "Chieftan," making the run from Garden Island to Quebec in 4 days and 16½ hours. In raft navigation the Calvin Co. have this season developed a hitherto unthought-of speed, the present being the fifth or sixth time this year in which the trip has been made within five days. This speaks well for the crews of the Calvin Co.'s rafts and steamers, as well as for the management.

### FOREIGN.

About 60,000,000 feet of lumber has been shipped from Alpena, Mich., this season.

Log run is held at Saginaw, Mich., at $13.50 and upwards. Bill stuff has been offered as low as $7.50, and box is dull at $8 to $9.

There is a steady movement of hardwoods at Boston. Oak, cherry, ash and poplar are in most inquiry, and prices remain firm.

G. Elias & Bro., of Buffalo, are receiving a large quantity of mixed hardwood and pine by lake. The firm is also shipping maple flooring.

Smith, Fassett & Co., of Tonawanda, N. Y., last week purchased 5,000,000 feet of log run stock from the Spalding Lumber Co., of Menominee, Mich.

Pelton & Reid, of Cheboygan, Mich., have purchased 5,000,000 feet of pine lumber on Pine river, and will lumber there during the coming winter.

A large stock of Canadian logs is carried over at the mouth of the Saginaw river. An estimate places the amount at 1,000,000 feet, some of which are owned by Canadian parties and held for sale.

A remarkable scarcity of red cedar shingles is reported from Minneapolis. It is impossible to obtain the required stock even at the advanced prices now offered of from $2.10 to $2.20 per thousand.

According to the Northwestern Lumberman, a large percentage of lumbermen in the United States will operate in the woods next winter on an extensive scale. Reports state that several concerns intend putting in twice the amount of logs as last season.

Piece stuff is selling in the Chicago market at $8 to $8.50. Common inch has sold at $9, but there is promise of increased prices being obtained in the near future. Shingles are scarce and advancing.

Up to August 1st the Fredericton Boom Co., of Fredericton, N. B., had rafted 108,517,561 feet of spruce, 8,253,620 feet of cedar, 7,253,590 feet of pine, 2,330 feet of hemlock and 41 tons of timber—a total of over 124,000,000 feet. The company expect to handle in all this season about 160,000,000 feet, compared with 140,000,000 feet last year.

A comparison of the quantity of hewn and sawn wood received at ports in the United Kingdom of Great Britain and Ireland, more than one hundred in number, for six months this year, compared with same in 1896, shows a perceptible increase in the first half of 1897. The total quantity of hewn this year was 1,138,677 loads, and of sawn, 1,890,900 loads, making together 3,018,477 loads; while in the first half of 1896 there was landed 1,048,498 loads hewn and 1,802,052 loads sawn, making a total of 2,850,550 loads.

Prices realized at the last sale of Foy, Morgan & Co., London, Eng., were as follows: Per steamer "Mab," from Quebec—10 x 3 x 9 1st spruce, £7 5s; 12 x 3 x 7 1st spruce, £7 10s. Per steamer "Greylands," from Quebec—13 x 3 x 9 1st, 2nd and 3rd red pine, £7 10s. Per steamer "Senator," from Vancouver—20/42 ft., 7/8 in. x 14/16 in. prime clear, 1s 5d; 12/40 ft., 6 in. x 12/24 in. prime clear, 1s 4d; 12/36 ft., 3 in. x 15/22 in. prime clear, 1s 3d; 20/40 ft., 3 in. x 12 in. prime clear, 1s 3d. Per steamer "Castlemoor," from Quebec—12 x 3 x 10 4th pine, £6 10s; 12 x 3 x 9 4th pine, £6 10s. Per steamer "City of Wakefield," from St. John—12/14 x 3 x 7 1st, 2nd and 3rd spruce, £6 10s; 12/13 x 3 x 7 1st, 2nd and 3rd spruce, £6 12s; 9/11 x 3 x 7 1st, 2nd and 3rd spruce, £6 10s.

## CONDITIONS AT LONDON.

According to Churchill & Sims' wood circular, the importation of wood goods at London from the St. Lawrence up to July 5th was 1,025,000 pieces of pine deals, and 1,077,006 spruce deals, against 1,282,000 and 931,000 pieces respectively for the same period in 1896.

From New Brunswick the import was as follows:

| | 1897 | |
|---|---|---|
| Pine deals | 31,000 | pieces |
| Spruce deals | 360,000 | " |
| Birch planks | 175,000 | " |
| | **1896** | |
| Pine deals | 1,000 | pieces |
| Spruce deals | 126,000 | " |
| Birch planks | 137,000 | " |

The market for pine deals, especially in regular sizes, has continued to be very steady, with an improving tendency for good and seasoned parcels. The trade has been much hampered by the difficulties of handling the importation, which is always heavy in July. Spruce deals have arrived freely, but there has again been a good consumption, and prices have only dropped slightly. Birch timber has been sold at ruinous prices, the stock being far too large. Oak, ash and elm timber have been in little demand, and what white pine there is here is being carefully held, there being indications of a short supply from the shipping ports.

Considerable arrivals of sawn timber have swelled the stock in the docks, and prices have receded slightly under constant pressure of sales. The demand is good, and a fair business has been lately effected at prices which have shown some improvement towards the end of the month, so that, with the absence of anxiety on the part of holders to accept current rates, the market should soon recover itself. Deals and boards are still heavy in stock and difficult to force into consumption at anything like remunerative rates to holders, except where the quality is greatly above the average.

## SALE OF TIMBER LIMITS.

The first sale of new timber berths took place at Fredericton, N. B., last week. Seventeen blocks in all were sold. The following is the result: North east of Wild Goose Lake, north west branch of Green river, 7½ miles, sold to W. T. Whitehead, $20 per mile; west and north of Wild Goose Lake, north west branch of Green river, 7 miles, W. T. Whitehead, $21 per mile; head of Little river, Sunbury, 3 miles, Thos. Fulton, $8 per mile; Five Mile Brook, branch of Canaan river, 2 miles, J. A. Carr, at upset price; south east branch of south branch of Mamozekel river, 7½ miles, Hale & Murchie, at upset price; north east of Serpentine river, 3 miles, Hilyard Bros., at upset price; south of Serpentine river, 8 miles, Hilyard Bros., at upset price: McKeen Brook branch Serpentine river, 9½ miles, Hilyard Bros., at upset price; south of south Oromocto Lake, 3 miles, Geo. Barnhill, $51 a mile; north of Middle river, Gloucester county, 6 miles, Sumner Co., at upset price; north of south branches Middle river, Gloucester county, 6 miles, Sumner Co., upset price; Middle river, 6 miles, Sumner Co., upset price; Middle river, 6 miles, Sumner Co., upset price; Eel river, Escuminac, 3 miles, Thomas Murray and David Mundle, $21 per mile; Restigouche river, 5 miles, J. P. Mowatt, upset price.

## BUSINESS NOTES.

Reuben Haskin has purchased the saw mill of J. E. Brown, at Delta, Ont.

Louis Chenier, lumber jobber, of Pembrooke, Ont., is announced to have assigned to G. Delahaye.

J. F. Richardson, lumber merchant, of Lower Brighton, N.B., is offering to compromise at 10 cents on the dollar. His liabilities are given as $10,000.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Arnprior to Montreal, $1.50 per M ft.; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. To New York for boat delivery, lots 50 M ft. and over, $2.50 per M ft., under 50 M feet $3.25 per M ft. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Boat delivery, lots 50 M ft, and over $3.00 per M ft., under 50 M ft. $3.75 per M ft. Parry Sound, $4.00 per M feet; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively: Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Spragge, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c. From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Central Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods

# THE RETAILER AND Wood-Worker

## ELECTRICITY IN WOOD-WORKING CONCERNS.

In the average wood-working shop run by an engine of 100 horse power, how many horse power do you suppose is consumed in driving shafting and belts, and is lost between the engine and the machines? There is a good deal of loss, and in shops where the shafting runs pretty freely, it is safe to say that over 60 per cent. of the power developed by the engine is lost as above stated. It has been determined by pretty good authority that every time a certain amount of power is transmitted through a shaft, at least 10 per cent. of the power is absorbed by that single shaft. This seems like a good deal of loss, but it is for good shafting, well hung and easy running. What then must the loss be when the shafting is out of line?

Electric dynamos and motors have been brought to such a height of perfection that the generator (as the dynamo is called) loses only five or six per cent. of the power delivered to it, in changing that form of power into electrical energy. The motor is equally efficient, and allowing for a loss of one per cent. in the conducting wires, there is a total loss of 9 to 12 per cent. between engine and machine, instead of the 50 or 60 per cent. loss where shafting is used.

That it is better and cheaper to carry power from the engine by wire than by shaft, is about being acknowledged by the best engineers in the world, and many plants are thus being and have been fitted, to the great benefit of the owners. The price of dynamos and motors is quite high, and the question naturally comes up how much it will pay to spend money for this machinery; that is, is it better to put a separate motor to each machine, no matter how small it may be, or shall the machines be divided into groups, with a separate motor to each group?

It all depends upon the kinds of machines, the amount of power used by each, and the nearness together they can be located. The log saws should each have a motor of its own, likewise big surfacing machines and all other tools consuming a large amount of power, but when it comes to small machines, they can be profitably driven several in a bunch, provided a lot of countershafts are not needed. A number of bench saws, for example, may be driven from the same shaft, but no tight and loose pulleys will be allowed, and no counters for getting up the necessary speed can be used, as they all consume power, and that is what we are saving by electrical transmission.

Put up a single shaft. It can be a pretty small shaft, for it can run at about one-fourth the speed of the machines or thereabouts, and the machines started and stopped by friction pulleys on the fast-running shaft. There will be a number of disparaging remarks concerning friction pulleys, but it makes all the difference in the world how friction pulleys are used. There are good ones—of the rim-friction kind, so called to distinguish them from those making fast to the hub and known as hub friction pulleys, which I like best to avoid. The fast-running friction has much less work to do than the slow-moving friction pulley, which is perhaps put in one of the main lines and has to drive a lot of machines and the whole of the shafting, and run at a low speed at that. It is to drive, I say, but I might better say that a friction thus mounted drives all it can and lets the rest slip, hence we condemn it when it is actually doing its very best; but, mounted on a fast-running shaft and driving only a single machine, the friction pulley will give excellent service.

A single machine can be started at will, and stopped when the work is done or any changes are to be made, without wasting any power in loose pulleys and their accompaniments. There is one thing in regard to a motor with each large machine: Although there is a certain speed at which each motor will work economically, in case of need a machine can be run slow or fast at will by simply moving the handle of the starting rheostat. This is an advantage which will be greatly appreciated when electric power has become common.

I have in mind a shop where the old line-shafting was all taken out and a number of motors put in. One two-inch shaft, run at about 1,000 revolutions per minute, drove a small band saw, three bench saws, a shaper and a pony planer. All these machines were belted from shaft, which ran across the room overhead, and the machines were arranged in a row nearly underneath the shaft. The motor which drove the shaft was attached immediately to the end thereof, being coupled direct through some sort of flexible coupling which permitted the shaft to get out of line without affecting the armature shaft.

Aside from driving machinery, there are many places where electricity can do good work. In the engine room, contacts can be arranged so as to ring a bell when the engine gets below a certain speed through an overload, and to ring another and different-toned bell when the speed gets too high through the breaking of a governor belt. In the saw mill electricity will make the best feed you ever saw. It will discount the steam feed and not half try. Instead of the long and costly "gun barrel" cylinder, with piston attached direct to the carriage, just put in a small motor at any convenient place around the mill, and gear the motor to a sort of gypsy head around which a steel cable passes to the log carriage. By running the motor, the cable will be over-run and the carriage moved at will, at any speed, in either direction, by simply moving a little lever which controls the current supplied to the motor. A log can be "fired" at the saw with this rig as spitefully as with the "gun barrel" steam feed so much prized by some sawyers, and the speed can be regulated in a much more positive manner without having any steam pipes to freeze up, burst, or get broken through accident.—James F. Hobart, M. E., in The Wood-Worker.

## THE RETAIL DEALER A NECESSITY.

Mr. D. E. Sprague, of the Winnipeg saw mills, in speaking with a representative of The Commercial about the price of lumber, pointed out that the consumer gets lumber at a price nearer the first cost than is the case with almost any other class of goods. In the lumber trade in the Northwest there are no jobbers. The lumber goes direct from the manufacturer to the country retailer, and the latter sells to the consumer. In most other classes of goods there is, first the manufacturer, second the commission or manufacturer's agent, third the jobber, and fourth the retailer. As the margin of profit to both the manufacturer and retail dealer is very moderate, the consumer gets his lumber supplies at as close to first cost as it is possible to secure it. The retailer is almost as much of a necessity in the trade as the manufacturer, as it would be practically impossible to distribute lumber direct from the mills to the consumer and meet all the requirements of the consumer for small lots of lumber. The mills might maintain agents and carry stocks at country points, but there would be no advantage in this, as they would have the same, or a greater, expense as a retail dealer, whereas a retail dealer who would be looking after his own business could do it to better advantage than the mills could do it through an agent.

## DECISION AFFECTING PLANED LUMBER.

The first decision affecting lumber under the new tariff, says the Lumber Trades Journal, was promulgated the first of the month at Washington by Assistant Secretary Howell, of the Treasury Department. He holds that the section of the act which permits the products of the forests of Maine, on the St. John's river, owned by American citizens, and sawed and hewed in New Brunswick by citizens of the United States, to be admitted free, forbids the free admission of lumber which has been planed or improved in any way beyond "sawed and hewed." The phrase "the same being otherwise manufactured" is held to prevent the free entry of planed lumber.

A mutual insurance company says it has cancelled more risks during the last two years because mill and factory owners neglected to keep their mills clean and supplied with barrels and buckets on each floor, than for all other causes combined. Experience has proved beyond doubt that many fires are due directly to dirt and rubbish that is permitted to accumulate about the mill; also that a large per centum of these fires would be extinguished in their incipiency were the simplest of all apparatus for extinguishing fires at hand. Not only should the large barrels be kept filled with salt water, but they, as well as the buckets, should have "For Fire Only" painted on them with bright red paint.

### McLEAN & SON'S MILL AT WINGHAM.

THE firm of McLean & Son, of Wingham, Ont., whose mill we illustrate on this page, is composed of Messrs. L. and J. A. McLean. They have long been engaged in the lumber trade, and are well known throughout western Ontario, having been proprietors of several different mills. They purchased the present mill property in 1882, and have since done a progressive business, under the management of Mr. J. A. McLean.

Modern machinery has been added to facilitate the handling of the lumber—also stave and heading machinery and shingle machines. A cooperage shop also forms a part of the establishment. Commodious yards and sheds afford ample storage capacity, while the G. T. R. provides means of shipping. The power for the mill is supplied by a 60 h. p. boiler and a 45 h. p. engine. The cut in the sawmill this season had, early in August, reached 1,800,000 feet.

### PERSONAL.

Mr. J. B. Klock, of Klock's Mills, Ont., has returned from a visit to Great Britain.

Mr. William Gillies, of the lumber firm of Gillies Bros., Braeside, Ont., has spent some months in British Columbia, where he is interested in mining claims.

McLEAN & SON'S MILL AT WINGHAM, ONT.

Mr. E. Van Senden, of Emden, North Germany, was a visitor in Toronto a fortnight ago. Mr. Van Senden is the son of an extensive lumberman in Germany, and is making a tour through Canada to learn something of its forest wealth.

Mr. E. E. Sheppard, Canadian Commissioner to South America, Central America and Mexico, has presented his report on the possibilities of trade with Mexico, in which he states that Canadian lumber can find a market there. Mr. Sheppard is now visiting South and Central America.

---

Simply drying lumber is not the same thing as seasoning it. Lumber can be dried in a few days in a dry-kiln, but that does not season it. There would be trouble in working mahogany if it went as directly from the green tree into the finished parlor set as does much of our native wood. But little mahogany reaches the factory until it is from eighteen months to three years old. The great fault with all our users of native woods is that they are simply dried and not seasoned. Seasoning is not necessarily drying. If lumber is seasoned, the drying of it is an easy matter. Herein lies the mistake of many finishers of hardwoods.

## THE NEWS.

—Mr. James Richards is completing the erection of a new saw mill at Kinlough, Ont.

—New machinery has been placed in John Dewar & Sons' mill at St. George, N. B.

—H. & F. Swim, Doaktown, N.B., whose mill was burned, purpose building a larger one.

—The Robson Saw Mill Company's business at Robson, B.C., is advertised for sale by auction.

—A. & P. White's saw mill at Pembroke, Ont., suffered damage by fire last month to the extent of $500.

—An up-river lumberman, according to the Fredericton Gleaner, will probably erect a large rotary saw mill near that city.

—The Maritime Sulphite Fibre Company intend placing a rotary mill on the wharf they are now building at Chatham, N.B.

—Jas. Young, saw mill proprietor, of Auburn, Ont., is building a planing mill in connection with his saw mill, and is also erecting a new boiler house.

—The Ontario government is taking steps to improve several watercourses. The outlet to Cobbs, Fairy and Mary's Lakes have already received attention.

—A large piece of timber has arrived at Ottawa, consigned to Hon. Sidney Fisher, Minister of Agriculture. The plank is a Douglas fir from British Columbia, and is three inches thick, fifty inches wide and sixteen feet long. It is a clear piece of timber, without knots or cracks.

—Mr. Joseph Belanger, of Gracefield, has been appointed government fire ranger, and assigned to duty on the Eagle branch of W. C. Edwards & Co.'s timber limits.

—Mr. Thomas Atkinson, the veteran lumber manufacturer, is anxious to dispose of his mill property at Mortimer, N.B., on the I.C.R., one and a half miles from Harcourt Station.

—The Jenckes Machine Co., of Sherbrooke, have just completed the balance of the saw mill machinery for the Montague Paper Co., Lake Megantic, who expect to start their new mills at once.

—The Nova Scotia Lumber Company are building a new mill at Sherbrooke, N. S., to replace the one recently burned. It will cost in the vicinity of $20,000 and will be completed early in October.

—The Ontario government is said to have issued circulars with the object of learning the views of lumbermen regarding the advisability of passing a regulation compelling all timber cut on Crown lands to be manufactured in the province.

—William Young, of Wiarton, chartered the steamer Swallow to take 250,000 feet of lumber to Detroit, hoping to get the same delivered before the tariff bill became law. In this he was unsuccessful, and the payment of $500 duty followed.

—Wm. W. Stewart, Lucknow, Ont., is erecting a new planing mill on the site of the building burned in June last. The new mill will be two stories, 56 x 70 ft., and will be thoroughly equipped with modern wood-working machinery, and a new 80 h.p Bell engine from the Bell Engine Works, Hensall.

—Messrs. R. & J. Brown, of Starrat, Ont., who are the owners of a twelve hundred acre timber limit skirting the shores of Beaver Lake, are erecting a saw and shingle mill on this lake, six and a half miles from White Hall station. Power will be furnished by a new Abell 60 h.p. boiler and a 35 h.p. engine.

—The Bank of Toronto and McArthur Bros., lumber merchants, have entered an action at Osgoode Hall to obtain an injunction restraining Wm. Irwin & Co., of Peterboro', from cutting timber or otherwise disposing of timber on a limit in Algoma, claimed to be the property of the applicants under a mortgage.

—The Acton Free Press says that W. Douglas and J. McArthur recently pulled what they consider a mammoth pine stump. It measured seven feet in diameter, twenty-seven feet from tip to tip of the roots, and the roots were seven and a half feet into the ground.

—Some American operators who own limits in Canada are in a peculiar position. One firm has given a contract to a Canadian firm to take out twenty-five million feet of logs, and in case an export duty of $3 should be imposed by the Dominion gouernment, they will have to pay $75,000 or have the lumber sawn in Canada.

### CASUALTIES.

—Homere Desharnais, of Sherbrooke, was peeling pulp wood near Bulwer, Que., when the top of a dead tree was blown down upon him, killing him instantly.

—A shantyman named Louis Plante, while working in Cashman's lumber camps near Sault Ste. Marie, Ont., was killed by a falling tree. His home was at Casselman.

—A serious accident occurred in Montgomery's new mill at Dalhousie, N. B. An employee named Andrew Smith was crushed between a rotary carriage and a post, breaking three ribs, which pierced his lung, causing extensive hemorrage.

—James Riddle, of Thornbury, Ont., was killed in a saw mill at Byng Inlet. He was working on a loaded car on the tramway, which had run off the track, and while thus engaged slipped off the wet planks and fell a distance of twenty feet, striking his head against a log and fracturing the skull. He rolled into the water, and the body was recovered three-quarters of an hour later.

### SAW THE LOGS IN CANADA.

Under the above heading, Mr. John Waldie, of the Victoria Harbor Lumber Company, writes as follows in the Toronto World :

In a recent editorial article in the Globe, reference was made to a proposal under consideration of the Ontario government, to limit the employment of labor on Crown lands to Canadians only ; that is, lumbermen cutting under license were to employ only Canadians.

While there would be no general objections from lumbermen, it appears to those familiar with that class of work that the words of a late statesman fit the case exactly, viz., "There's nothing to it."

During a boom in the lumber trade three or four years ago several American lumber companies brought in men and their outfits, but when the business became normal those concerns collapsed, and to-day, owing to dullness of trade, there are not three Americans in every hundred men working in the woods of Ontario, and if we take Ontario and Quebec together, there is not even that percentage ; therefore, it amounts to an empty proposal.

Then, such an order should not emanate from a provincial government, while our Dominion government is sending out agents to foreign countries inviting immigration, even from the United States. The only benefit the Ontario government can confer upon the workmen of this province is to insist that the logs taken from the Crown lands (the people's property) shall be hewn or sawn in the province. The labor to do this will give ten times the employment that is incident to cutting down a tree and drawing it to the nearest stream.

I notice that John Charlton, M.P., admits the right of the Ontario government to do this, but presents very forcibly the feelings of the Michigan mill men and threatens a dire punishment from Washington to Canada should the people of Ontario demand that their government stand up for provincial rights.

The people of Ontario have for years supported a government who claimed to be defenders of provincial rights against those in authority in Ottawa, who sought to interfere with our timber, minerals, etc. Now, are the people of Ontario going to submit to dictation from Michigan or Washington, even though it be presented ever so favorably by those interested in United States industries? Has not Ontario a right to her own estates? Does not every state in the Union decide who shall hold property in the state? Has not the United States government denied its responsibility for the acts of the separate states?

If the government of Ontario adopts the proposition of Mr. Bertram, with such additions as they deem necessary, no wrong will be done to American citizens within or without our borders. They will only be making such regulations and laws as they deem for the best interest of the people, and such as will promote our welfare.

The law or regulation will apply to Americans and Canadians alike.

I further contend that where a settler is to follow the lumberman, the Canadian process of cutting is preferable to the American. And even though the government receipts for timber dues were less for a few years, the country would be benefitted in the end theory.

# WOOD PULP DEPARTMENT

## GOOD LOCATION FOR A PULP MILL.

WHITNEY, ONT., Aug. 16th, 1897.

Editor of the CANADA LUMBERMAN:

DEAR SIR:—While the excitement in the Klondyke and Kootenay districts is attracting the attention of Canadian capitalists, would you permit me, through the columns of your valuable paper, to place before the readers of THE LUMBERMAN an industry (and a growing one) where safe investment can be made, with large profits in return. I refer to the sulphite pulp industry. There is no doubt that until very recently hundreds of thousands of dollars, and I may go further and say millions, have been spent experimenting on the manufacture of sulphite pulp, and, indeed, some are experimenting still who have not an up-to-date mill; but with well-directed mechanical experience it has been shown that a 30 ton sulphite mill can be erected complete for $130,000, equipped with Canadian machinery.

To manufacture a ton of sulphite pulp costs $22; this is for first-class fibre. The selling price in England at present is $50 per ton, and the freight to British ports about $5 per ton. Therefore, after making a liberal allowance for losses, &c., the profits should be large enough to satisfy the most exacting investor.

During last summer I was engaged by some companies examining some probable sites for pulp mills, and reported on some others. There is one in my opinion that cannot be excelled on the continent of America. It is located at Sheet Harbor, N. S., and was recently purchased by the Hon. A. R. Dickey, the late Minister of Justice in the Conservative government, who resides at Amherst. Sheet Harbor is situated 70 miles from Halifax, on the Atlantic coast.

It was on the 3rd of February last that I visited Sheet Harbor, at the request of the honorable gentleman, to inspect and make a report on the sulphite pulp mill and property which he had lately purchased. The pulp mill originally cost $110,000. After thoroughly inspecting the mill, I found that to increase the capacity of the mill from 5 tons to 20 tons, so as to put it on a paying basis, would cost $60,000, and would require some new and up-to-date machinery, as well as some other slight alterations. I estimated it would require four months' time to make the necessary alterations, and then the mill would make a clear profit of $80,000 per annum. Mr. Dickey also personally owns 45,000 acres of the best spruce lands in Nova Scotia, which is adjacent to the mill, and also has a controlling interest in 43,000 acres more on the West river. There are fully 1,500 h.p., water power, on both the East and West rivers at Sheet Harbor, and when you stand and watch the beautiful West river flowing over ledges of rock from a height of 65 feet, until it flows under the bridge at Sheet Harbor and into the sea, and where harbor dues are very low and navigation open all the year round, and where the lowest possible freight rates to the United Kingdom can be obtained, I think that all will agree with me that sulphite pulp can be manufactured on this property at the lowest possible cost. I would advise any capitalist who has money to invest to communicate with the Hon. A. R. Dickey in reference to this valuable property.

Thanking you for the space in your columns.

Yours truly,

THOMAS R. ALLISON.

## TESTIMONIAL TO CANADIAN PULP.

A CORRESPONDENT writes to the Wochenblatt fur Papierfabrikation that he has received from an English paper-maker samples of Canadian mechanical pulp in rolls, and that he finds the quality excellent. The price, he states, is £50 per ton in London, Manchester, etc., and is readily paid. He had the samples thoroughly tested microscopically, and found only a very small proportion of soft yellowish splinters.

Under the microscope a large number of long and thoroughly isolated cells and cell pieces were visible, similar to pine cells in length and thickness. These long cells were embedded in about an equal proportion of fine broken up cells; at first the pulp had the appearance of cellulose. Micro-photos of the Canadian and fine-ground German pulp showed very distinctly that in the latter there were a great many broken cells, splinters and shive, while the Canadian was all long, properly isolated fibres, with soft cloudy dissolved cell fragments. Apart from this examination, he says the good quality of the Canadian pulp is proved by its reputation in England, and the higher price (10 to 14 per cent.) paid for it, although lately its superiority was very much doubted.

He says he does not know whether to attribute it to the hot grinding process without refining, or to a better raw material.

## PULP NOTES.

During one month this summer 25,000 tons of pulp were shipped from Montreal to the British market.

It is probable that the Nova Scotia Lumber Co., of Amherst, N.S., will erect a pulp mill in the near future.

Messrs. Mooney, of St. John, N.B., have purchased property at Mispec, where they will probably erect a pulp mill.

The Montague Mills Company, of Megantic, Que., have resumed operations. Their output is for the European market.

A large deputation of pulp manufacturers has requested the Quebec government to reduce the stumpage dues from 40 to 25 cents.

The ground pulp market in Germany is stiffening considerably, as the demand for pulp is on the increase, but, on the other hand, complaints continue that raw wood is getting dearer.

The Royal Paper Mills Company have purchased the saw mill belonging to Mr. Arkley of Sherbrooke, situated at Dudswell. It is the intention of the company to have the mills moved to East Angus, Que.

The Acadia Pulp & Paper Co., of Halifax, N. S., have placed an order with the Jenckes Machine Co., of Sherbrooke, Que., for six 72" wet presses, six 10-plate screens and two centrifugal pumps, for the extension of their mills at Milton, N. S.

The Jenckes Machine Company have just shipped the complete screen and pressing machinery for the pulp company at Sturgeon Falls, Ont., consisting of four 72" set presses, with four 10-plate screens. They furnish the wood barkers for the same mill.

An English exchange remarks: "If the Scandinavian pulp makers continue their suicidal policy of pushing up prices, we have got Canada and Newfoundland to tap for our supplies, and would not be long in getting at them. We are sure of one thing; if Scandinavian prices don't come down, more makers than Albert Reed will arrange for Canadian mills." As to this the New York Paper Mill says: "The significance of these remarks in an English journal is seen when it is remembered that it is only three or four years ago that the first consignment of Canadian pulp reached England, and it was hard work to find purchasers for it."

Pulp Wood, of London, Eng., says: "Mr. W. P. Douglas, a director of the Sault Ste. Marie Pulp and Paper Co., of Sault Ste. Marie, Canada, is at present in this country looking after the interests of his firm. Mr. Stuart and Mr. Lee, of the Maritime Sulphite Fibre Co., of Chatham, New Brunswick, left Liverpool on the 29th inst., on their return voyage, after a lengthy stay in this country, and Mr. A. G. Jones, of Halifax, representing the Acadia Pulp and Paper Co., also returned recently to Canada after arranging for the disposal of his company's product. It will be seen that the Canadians are leaving no stone unturned to make a market in this country.

## ONTARIO FORESTRY COMMISSION.

THE Ontario Forestry Commission lately returned from a tour in the Georgian Bay and Lake Nipissing districts. Regarding the trip, Mr. Southworth stated to a Globe reporter that they visited some timber lands in the neighborhood of Whitefish, going down the Vermillion river through Louise township, where there is much cut over and burned over country. They visited also the country around Thessalon, in which there is quite an old and large settlement in the midst of a considerable territory not adapted for agriculture. From there a general inspection of the north shore of the Georgian Bay was made, a closer investigation being undertaken in the vicinity of Collins' Inlet. The forest here is described as very interesting, showing pine in block—from seedlings one or two years old—growing underneath a dense crop of poplar, birch, etc., through the stage where the pine was overtaking the poplar and struggling to get above it. This land is all under license and makes an ideal timber estate, being cut up everywhere by floatable streams. Thanks to the present fire-ranging system, this section has been well protected and escaped any serious fire for some years past.

## THE VICTORIAN ERA EXPOSITION.

THE approach of the opening day of the Victorian Era Exposition, which commences this year on August 30 and lasts till Sept 11, is deserving of more than passing attention. By no other feature of its civic life is the city more widely and favorably known than by this annually recurring exhibition of the products, the resources, the capabilities of our country and people. It is popularly known as Canada's Greatest Fair, and the title does not belie its scope and comprehensiveness. The little affair which started with local aims assumed provincial proportions and then continued to spread until it is now entitled to be looked upon as a Dominion affair. Especially so is it the case with this exhibition, which in the value and number of its exhibits, the attractiveness and scale of its many entertaining features, far surpasses any preceding exposition. Take only one feature, the Jubilee parade, a replica of the scene which took place in London. Everything will be exactly the same as in London on June 22. The escort of colonial and British troops, the Indian Princes, the Princes and Princesses of the royal family, Queen Victoria, her carriage, state trumpeters—everything will be an exact reproduction of the London pageant. An idea of the scale upon which this feature will be presented can be gathered from the fact that the frame work and structure of St. Paul's Cathedral and Buckingham Palace is over 650 feet in length and runs up to 80 feet in height. Take again the tableaux of historical events during her majesty's reign; they cover hundreds of feet in area. These features are more than entertaining, they are educational. They enable Canadians to grasp the immense size of the British Empire, and the great variety of races bound together by the same ties of loyalty to the one institution. They also give a vivid idea of the might and pomp of the empire and well illustrate the meaning of that phrase, "Hands across the Sea," words which in this Jubilee year possess so much significance to the people of the Anglo-Saxon race. Add to these the great variety of the objects displayed, from the minerals of British Columbia to those of Nova Scotia, from the products of the west to those of the east. Visited in a proper spirit the fair is more than an exhibition, it is a source of instruction, for there one can see and appreciate in a short time the great extent, value and variety of Canada's resources.

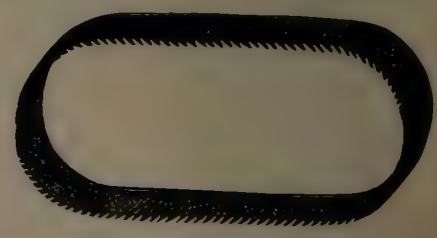
**WHY** BAND SAWS BREAK

SIXTEEN REASONS,
AND HOW TO
AVOID THEM



Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking; analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner of properly setting irregular teeth is described. In connection with the treatise is a history of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, **ONE DOLLAR.**

## PULP MILL FOR ST. JOHN.

ANDRE Cushing & Co., of St. John, N. B., have made a proposition to the city that if they were granted free water from Spruce Lake for their steam plant and the manufacture of pulp, they would undertake to build a pulp mill of 20 tons per day capacity on Union Point, near their present saw mill. Such a mill would cost from $150,000 to $175,000, and would furnish constant employment to, say 150 hands, with an expenditure for wages of from $50,000 to $60,000 a year. Mr. Cushing states that he is advised on expert authority that New Brunswick spruce is superior to the Scandinavian article. It grows faster and has a better fibre. The demand for sulphite pulp in England is practically unlimited.

## MARKET FOR PULP WOOD.

MR. Edmond Wagner, of Paris, representing Darblay, Pere & Fils, one of the largest pulp and paper making firms in France, is at present in Canada, seeking experimental shipments of spruce pulp wood to his firm. The size wanted is three feet six inches long, and from five inches up in diameter, all to be peeled. His firm would charter a vessel to carry the wood if satisfactory arrangements could be made, and if the result was satisfactory yearly contracts would be made. Mr. Wagner has been in the upper provinces, and has lately returned to St. John. His firm is not the only one that is looking this way. Canada is sure to have a great development of the pulp industry. The government of Norway and Sweden has made stringent regulations curtailing the cut of trees suitable for pulp wood, because of the rapid denudation of their forest areas.

## PUBLICATIONS.

The Timberman, of Chicago, has issued a special number to commemorate its eleventh anniversary. In the 200 pages are included 140 pages of advertising, some printed in color, which in itself is indicative of the prosperity which the publication enjoys.

A new edition of the "List of Shipping Marks on Sawn and Planed Wood," has just been issued by Wm. Rider & Sons, of London, Eng. A new feature in this book is the section giving a complete list of shipping marks on Canadian wood goods; also a glossary in French, German and Spanish. The price is 6s. in cloth and 7s. 6d. in leather.

The two well-known hardwood lumber papers of Chicago, viz., Hardwood and the Hardwood Record, have amalgamated, and henceforth will be issued as one publication. Mr. O. S. Whitmore, the late editor of Hardwood and a writer of no mean ability, will fill the editorial chair, and the business department will be managed by Mr. C. V. Kimball, who has acted in that capacity for the Hardwood Record.

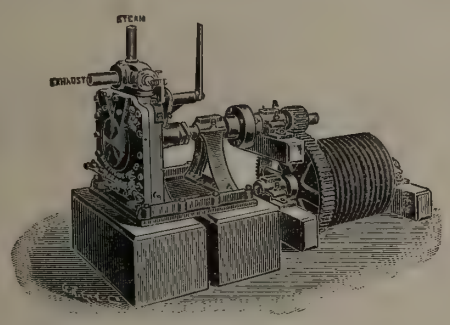
THE
DAKE STEAM FEED



Embodies the following Advantages:
SIMPLICITY OF CONSTRUCTION,
POSITIVE AND EASY MANAGEMENT,
ECONOMICAL USE OF STEAM,
SMALL SPACE OCCUPIED,
CHEAPNESS,
EASY ADAPTATION TO EITHER NEW MILLS OR THOSE NOW IN USE.

The movement of the engine in either direction is under the absolute control of the sawyer, thus accommodating the speed of the feed to the size of the logs.
Mill men who have used other makes of Steam Feeds comment favorably on the economical use of steam of our feed over others.

TELEPHONE 475
THE J.C.McLAREN BELTING Co MONTREAL

If oil comes in contact with gum belts it softens them. If water gets between the canvas and the seams, then freezes, it separates the layers. Even frosty pulleys, in contact with gum belts, tear them from the canvas. Boiled linseed oil lightly applied on the pulley side of a gum belt will help to overcome slipping, caused by dust, etc. Gum belts are used with success in damp or wet places in preference to leather ones, because the leather absorbs dampness, etc. They cannot be used with success at half-cross or on cone pulleys.

An effort is being made to introduce mahogany in place of oak, with much reported success, but there is no danger that oak will be supplanted to a great degree. It is possible that a lavish use of mahogany would cut into the demand for the finer qualities of quarter-sawed oak, but ordinary furniture will continue to be made of oak, because it is the most available in quantity and price. At this juncture, when furniture and finish manufacturers are turning attention to mahogany, it is reported that the supply of that wood in the leading eastern markets is anything but large, nor is there prospects that stocks will soon be increased. This is likely to deter manufacturers from going into mahogany on a large scale; for if there is anything that the American manufacturers dislike it is buying a raw material that is not plentiful and reasonably cheap. Hence furniture and finish manufacturers will stick to oak as the most available and profitable wood.—Northwestern Lumberman.

## St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, f it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N. B., Nov. 17th, 1894.

R. H. SMITH CO., Ltd., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., Ltd., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P. S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W. G. S.

## THE "LEADER" CROSS-CUT SAW

These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

VOLUME XVIII. NUMBER 10. | TORONTO, ONT., OCTOBER, 1897 | TERMS, $1.00 PER YEAR Single Copies, 10 Cents.

## PROMINENT OTTAWA LUMBERMAN.

AT the convention of lumbermen held in Toronto in August last, at which a resolution was passed requesting the Ontario government to provide that all timber cut on crown lands should be manufactured within the province, a strong opponent to the measure was Mr. W. C. Edwards, M.P., of whom we present a portrait herewith.

Mr. Edwards is one of the most influential lumbermen of the Ottawa Valley. He is a son of the late William Edwards, a native of Portsmouth, England, who came to Canada about the year 1820.

The subject of our sketch was born in the township of Clarence, Ontario, in the year 1844, and educated at the Ottawa grammar school. At the age of 19 years he was employed by Cameron & Edwards, lumbermen, of Thurso, Quebec, with whom he remained until 1868, when he joined in partnership with Mr. James Wood and built a small steam saw mill at Rockland, on the Ottawa river, under the firm name of W. C. Edwards & Co. This was the foundation of his present extensive business. From the beginning the company met with success, and in 1871 they were joined by Cameron & Edwards, of Thurso. A larger mill was then erected, and the business gradually expanded, until in 1875 fire visited the locality, destroying the entire premises, including mills, docks, buildings, plant, and, indeed, everything pertaining to the establishment, besides a large stock of lumber. The circumstance was particularly unfortunate in view of the fact that less than one-third of the loss was covered by insurance.

Probably inspired by the success attained in the past, the firm set to work to rebuild, and in the following spring a new mill was in operation. Previous to opening mills at Rockland only two or three houses were located there, but to-day the village has a population of about 2,000.

At New Edinburgh the firm of W. C. Edwards & Co. also have extensive mills, including planing mills, etc. Mr. Edwards has continued as sole manager of the firm's business, and, as indicated by the rapid growth, he has been eminently successful. Although the management of such an extensive concern necessitates his close personal attention, Mr. Edwards has found time to attend to public affairs. In the year 1882 he was unsuccessful in contesting for his present seat at the Dominion election, but was returned as the representative for Russell in 1878. The election was declared void, and a new election was held the following spring, with the same result. He was again re-elected at the general elections in 1891 and 1896. Mr. Edwards is a Liberal, and is recognized as an influential member of the party.

In 1866 Mr. Edwards formed the Thurso Infantry Company, and for three years was captain. He has been Justice of the Peace, Reeve of Rockland, and president of the County of Russell Agricultural Society, in which connection he has done considerable towards the improvement of stock and the general advancement of agriculture.

MR. W. C. EDWARDS.

## NEW TIMBER REGULATIONS.

ON Tuesday, September 21st, a meeting of the Ontario Cabinet was held, at which alien labor clauses were added to the crown timber regulations, by which United States owners of Canadian timber limits will be compelled to employ Canadian workmen in cutting the timber. The full text of the recommendation presented to the Council by the Commissioner of Crown Lands is as follows :

"No timber licensee or holder of a permit engaged in cutting, taking or removing sawlogs or timber upon or from the lands of the Crown, or driving, floating or towing the same in Canadian waters, and no other person, firm or company engaged in or about any such work under the authority or with the assent of such licensee or holder of a permit, shall employ or engage, or permit to be employed or engaged in any capacity whatever in and about or in connection with such cutting, removing, driving, floating or towing in Canadian waters any person who is not a resident of or domiciled in Canada, except the following persons, viz., the agent or manager having charge or supervision of the entire lumbering operations carried on by any person, firm or company within the province of Ontario, the head bookkeeper or accountant under such agent or manager, and one estimator or explorer for each operation, unless under special permission of the Commissioner of Crown Lands expressed in writing.

"Should any such holder of a timber license or permit who is cutting, taking or removing logs or timber upon or from the lands of the Crown, or any person by his or their authority or assent, employ or permit to be employed in his lumbering operations, either by himself or his agent or contractor, any person who is not a resident of the Dominion of Canada or domiciled therein other than is above excepted, then his license or permit, as the case may be, shall be suspended and held in abeyance, and shall not again be issued until so directed by order in Council, and then only upon such terms and conditions as the Lieutenant-Governor in Council may impose; and all timber and sawlogs cut on territory included in the license or permit shall be deemed to have been cut in trespass, and shall be subject to seizure and to the penalties provided and applicable to timber cut in trespass by any act of the Legislature or by any regulation.

"Where the tug used in towing any logs or timber is registered in or as of the United States nothing herein shall prevent the employment by the person using such tug of the captain, engineer or firemen thereof.

"All horses, cattle, sleighs, and all provisions, pork, flour, tea, and all tools and hardware, such as chains, axes, saws, and all tools, supplies or material of any kind whatsoever required or used in connection with the taking out of sawlogs or timber cut upon Crown lands, shall be purchased in Canada.

"Should any holder of a timber license or permit purchase, either by himself or his agent or contractor, supplies to be used in connection with the cutting of timber upon license lands in the province of Ontario outside of the Dominion Canada, except under permission of the Commissioner of Crown Lands expressed in writing, then his license or permit, as the case may be, shall be suspended or placed in abeyance as aforesaid; and all timber and sawlogs cut on territory included in them shall be deemed to have been cut in trespass, and shall be subject to the same penalties as are provided in paragraph 2 of these regulations in the case of logs or timber cut in trespass."

## CREOSOTING TIMBER.

WHEN in St. John, N. B., recently, the Minister of Public Works was waited upon by a delegation from the Natural Historical Society of New Brunswick. The delegation drew the attention of the Minister to the desirability of establishing in the Dominion a plant for creosoting timber. The creosoted lumber used in the construction of public works in the maritime provinces is at present imported from the United States at a large expense. The process, too, by which this timber is treated is not reliable, and the delegation recommended the Boulton process and the use of native timber. Mr. Tarte promised to take the matter into consideration.

## MR. J. W. CRAWFORD.

THE residence and saw mill shown in the accompanying illustration is owned by Mr. J. W. Crawford, of Durham, Ont., one of our enterprising lumber manufacturers. Mr. Crawford is a native of Scotland, and first saw the light of day on October 21st, 1848, his birth-place being Aberdeenshire. When a boy of seven he removed

RESIDENCE AND SAW MILL OF MR. J. W. CRAWFORD, DURHAM, ONT.

with his family to Canada, and in 1870 engaged in the saw milling business at Aberdeen. A few years later he removed to Durham, erecting his present mill, to which has been added a sash and door factory, planing and shingle mill. The saw mill is equipped with modern machinery, and has a daily capacity of 20,000 feet. Power is supplied by a Cowan & Co. 45 h. p. engine and boiler. Mr. Crawford has built up quite an extensive trade. In local affairs he has always taken an active interest, and has served as councillor for several years.

## BAND VS. CIRCULAR SAW.

THE band saw is adapted to the needs of saw-mills which are of a permanent character only, and consequently there is an enormous number of the smaller class of portable, or semi-portable, mills which have never considered the adoption of the band, but even among the substantial and permanent mills it is the minority only which have adopted that log-cutting machine that has come to take first rank in the public estimation and in saw-mill discussion, says the Timberman. We do not know what the proportion may be, but presume it would not be an exaggeration to say that there are five circular mills running to one band mill, in saw-mills of standard construction.

It is an interesting question why the band mill during the ten or fifteen years that it has been making such headway—during which time most of the mills in the country have been rebuilt in whole or in part—has not come into exclusive possession of the field, if all the claims of its advocates are well founded. These claims are based on two vitally important points—economy of material and better quality of product. As to the first claim there can be no question as to the fact, except when it be compared with the gang. The gang mill, if properly operated, is as economical as the band, though with a disadvantage in many classes of material that there is no chance to improve the grade of the product by turning the log or cant. As far as perfection of manufacture is concerned, there is more divergence of opinion.

The fact seems to be that there is more than mere prejudice resisting innovation—more than a mere clinging to old methods. That the band mill is a more expensive machine than the circular is one point which must be taken into consideration. It requires a greater expense to keep it up, and a higher degree of skill on the part of the filers and sawyers, and, in the third place, there is a legitimate question as to its economy when cutting small and cheap logs.

No one will deny that on large or costly logs the band mill is the only machine that should be used, and that to employ a circular for such a purpose means wanton waste of material. But there comes a point where, as logs decrease in size, and perhaps in quality, the circular is the more economical. There is no chance for argument in the proposition that for large logs the band mill is the more rapid producer, for the reason that it cuts almost as fast in the largest-sized logs as it does in the smallest. If the logs run two or three, or even four, to the thousand, the band mill will unquestionably show as great as, and even greater, capacity than the circular.

MR. JOHN CAREW.

In logs that run two or less to the thousand, the advantage of the band in point of capacity is a great one; but when you come down to logs that run ten or more to the thousand, that are perhaps only ten to fourteen inches in diameter, the circular is unquestionably the more rapid machine.

There are a good many lumber manufacturers, and among them some of the best in the country, who insist that for any class of work—no matter how small or cheap the grade or defective the logs may be—the band saw is the proper machine; but, considering its slower speed on this class of work, and its higher cost to buy and maintain, there must be a point where the advantages and disadvantages balance each other, and below which the circular is the more profitable machine.

The capacity of the band on large logs was demonstrated not long ago by the Burns Lumber Co., at Sattes, W. Va. On Saturday, June 12th, a trial run of ten hours resulted in a production of 133,277 feet of poplar lumber, of which 9,741 was inch, 21,840 feet one and one-half inch, and 81,696 feet two inch. This product was claimed to have been perfectly manufactured, and, considering that fact, the proprietors of the mill believe that the run was the best ever made. Yet that production was not the largest as a mere matter of record, for considerably larger outputs have been made in ten hours, though, perhaps, not of perfectly manufactured stock.

It is evident that the capabilities of the band mill have not, until a recent time, been thoroughly appreciated and developed; and yet it seems probable that to a certain extent it has been put to uses for which it is not well adapted.

## SAW MILL OF MR. JOHN CAREW, LINDSAY, ONTARIO.

WHEN in Lindsay recently a representative of THE LUMBERMAN visited the establishment of Mr. John Carew, who owns one of the many complete saw mills with which the province of Ontario is possessed, and of which the accompanying illustration gives a fair idea.

Mr. Carew manufactures all kinds of lumber, lath, shingles, pickets, etc. The business has been established seven years and occupies a large frame building 70x30 ft., with a wing 30x 24 ft., all two storeys in height, with a brick engine house 36x24 ft. The mill is fitted with the usual saw mill machinery, with facilities for an output of twenty thousand feet of lumber per day, and in the shingle department the output averages 25,000 per day.

The grounds in connection with the mill cover an area of four acres on the west side of the river bank. Mr. Carew's trade extends over a large section of the Dominion, and he is also a very extensive exporter, shipping largely to the United States and other foreign markets.

Mr. Carew gives employment to about 35 hands, and his establishment is one of the important factors of the industrial interests of Lindsay. He is also part owner of the steamer Beaver, which is used for towing logs from different points on the river and lake to the mill.

SAW MILL OF MR. JOHN CAREW, LINDSAY, ONT.

Mr. Carew is a Canadian by birth, and has resided in Lindsay for upwards of thirty years, having been in the lumber and wood business for five years previous to branching out into his present enterprise.

## THE ST. JOHN EXHIBITION.

By far the most important and successful exhibition held in the maritime provinces is that of St. John, N. B. This year it surpassed all previous records, both in attendance and attractiveness of the exhibits. Our representative sends the following particulars of exhibits in which readers of this journal are likely to be interested:

McFarlane, Thompson & Anderson, of Fredericton, N. B., had on view their celebrated Dunbar shingle machine, which attracted the attention of mill men.

On the lower floor the exhibit of the Small & Fisher Company, of Woodstock, N. B., was to be found. It consisted of three of their celebrated shingle machines, a rotary saw mill, and drag and circular sawing machines.

Fowler & Rankin, St. John, N. B., had a full line of axes on view.

The exhibit of the Robb Engineering Company was in charge of Mr. J. F. Porter, and included one of the company's well-known 40 horse power side crank engines, which are now being used extensively in saw-mills and wood-working factories and for electrical purposes.

The A. B. McLean Company, of St. John, exhibited a full line of mill supplies, including leather and rubber belting. This company are agents for the Beardmore Belting Company, of Toronto, and the Boston Belting Company, of Boston.

Walter Wilson & Sons, of St. John, had a fine display of band, circular, inserted tooth and gang saws.

The Lawton Saw Company had an exhibit of saws and rubber belting. They exhibited a gang saw, made for Messrs. E. D. Davison & Son, of Bridgewater, N. S. It is one of the thinnest gang saws used. Samples of tree saws, which are now largely used by lumbermen instead of axes, were shown.

The many lines of goods manufactured by the James Robertson Company made an attractive exhibit. The articles of interest to lumbermen included a nicely arranged cone of belting, which they sell in connection with their line of mill supplies. On the wall in the rear was a sample of their saw manufactures, which served as a very pretty background for the floor exhibits, comprising chisel-tooth saws in three sizes of teeth, patent edgers, lath bolters, etc., some of which the company have running with great satisfaction in all provinces of the Dominion. Solid tooth circular saws for all purposes; gang saws, cross-cut for one man or two, for log-cutting or tree felling, with all the different styles of teeth which the experience of the users of such goods has suggested as best suited to the conditions; concave or head cutting saws, groovers, bench saws, dado saws, buck saws, drag saws and hay cutting knives are also shown. Mr. P. McMichael is manager of the St. John branch.

A varied display of goods was made by Waring, White & Co., of St. John, one of the chief attractions being a miniature high speed, centre crank engine in motion, with automatic governor, also a miniature lathe. There were also shown an edger for portable mills, a double grip rotary dog, with head block and skid, Rich saw grinder, Ross lathe and packet mills, propellors, etc.

The exhibit of Campbell Bros., St. John, was one of the best ever made in their line of goods. It consisted of all kinds of chopping axes, broad axes, adzes, chisels, picks, slicers, hatchets, carriage springs and axles. The firm state that they find an increasing demand for their axes, on account of the manner in which they withstand frosty weather. They say lumbermen are willing to pay a slight advance for a good axe, and in selling their handmade black axe they feel confident their customers are getting the best value. Their axes are made similar to machine made, but in drawing the bitt (or steel) a hand hammer and sledge are used instead of trip or steam hammer, and in this way the steel is refined and is much stronger. They had an axe on exhibition, taken out of stock, with which they had cut iron bars one-half inch diameter, as easy as if it were lead, without the least injury. There has been a number of American manufacturers trying to introduce axes in the maritime provines, but lumbermen are afraid they will not stand when frost comes. Messrs. Campbell Bros. find their trade ahead of last year, and they are shipping a larger number to Quebec and Ontario every year.

## ACTION OF THE MICHIGAN DEPUTATION CRITICIZED.

THE Detroit News thus humorously refers to the recent interview of Michigan lumbermen with the Ontario government:

"If our Ontario cousins had any keen sense of humor, they would highly appreciate the visit of Michigan gentlemen to their capital yesterday. A deputation of Yankee lumbermen, who would be doing a manufacturing business in the Dominion if their government would let them, headed by ex-Governor Rich, and composed of such men as Thomas Pitts, Albert Pack, Frank Gilchrist, W. Churchill, Dwight Cutler, and so forth, presented themselves at the foot of the throne in Toronto, so to speak, and humbly asked the Ontario government to save them from the cruel persecutions of their own beneficent government at Washington. Their own representatives in congress assembled specially and extraordinarily for this very purpose, passed a law a month or so ago, which may be paraphrased thus:

'An act to forbid and prevent citizens of the United States from deriving any profit from the natural wealth of other nations: Be it enacted that no citizen of the United States owning timber lands in the Dominion of Canada shall, after having shaped the lumber from the trees of the Canadian forests, import the same, or any part of the same, into the United States.'

"In justice to the good senator from the state to which these orators belong, it is well to state that Mr. Burrows and the government of which he is an humble part were not moved in exacting this law by any feelings of hostility to any of their own citizens. The theory was to make the foreigners squirm while paying our taxes. No stone was left unturned by the lumbermen of Michigan owning pine lands in the Dominion to prevent the perpetration of the outrage by their own government. Their last recourse now is to apply in all humility to the government at which their own government designed to strike. If the Canadians will kindly permit them to bring their logs unsawed to this country, they can thereby escape in a measure the evil consequences of the vicious legislation which their own representatives in Congress were chiefly instrumental in bringing about. The formal request was preferred yesterday, and it is recorded that the Ontario Cabinet permitted the American gentlemen to retire without indicating to them what their views on the subject really are. Possibly the American visitor who lingered on the threshold of the Parliament building may have caught the echoes of the remark within, 'It is a long road that has no turn.'"

## THE LUMBERMEN'S REQUISITION.

THE following is a copy of the paper read before the Ontario government by Mr. John Bertram, on behalf of the committee appointed at the convention in Toronto:

"I have the honor to join with my colleagues in this matter in presenting to your honorable body the copy of a resolution passed by a numerously attended meeting of the lumbermen, held at Toronto on the 19th ult. The resolution sets forth that by the action of the United States government a duty of $2 per thousand feet shall be levied on lumber entering the United States, while saw logs are entered free. This, as a matter of course, would greatly encourage the sawing of Canadian logs in the United States, and correspondingly discourage sawing in Canada. It is obvious that the authors of this legislation feared that the government of Canada would, for the purpose of protecting a valuable industry, place an export duty of a similar amount on all logs leaving Canada to make the conditions even for both American and Canadian limit-holders; and so enacted a further clause, that 'if any country or dependency shall impose an export duty on saw logs, round unmanufactured timber, stave bolts, shingle bolts, or heading bolts, exported to the United States, or a discriminating charge on boom sticks or chains used by American citizens in towing logs, the amount of such export duty, tax, or other charge, as the case may be, shall be added as an additional duty to the duties imposed upon the articles mentioned in this paragraph when imported from such countries or dependencies.' Without in any way questioning the motives of this legislation, it may be fairly said that it is discriminatory in its nature; that it is an attempt to transfer the bulk of the business of sawing lumber in the Georgian Bay district to Michigan. As the resolution now presented is in favor of action being taken by the government of Ontario, it is not necessary to discuss it except incidentally from a Dominion standpoint.

"Confining ourselves, therefore, to Ontario, it may be said that in the province there are two main divisions or districts where lumber is manufactured for export, the Ottawa valley and the Georgian Bay district. For geographical reasons logs cannot be exported from the Ottawa valley profitably to be sawn anywhere in the United States, and so our attention is confined as to how it will affect the Georgian Bay and its tributary district. The Ontario government, by virtue of their policy of disposing of their standing timber on Crown lands from time to time by open competition, subject to certain conditions, have sold to three classes of purchasers, to whom they have an implied obligation of guaranteeing equality in the enjoyment of their purchases. The three classes of purchasers are: Canadians, who manufacture lumber in Canada; Americans, who manufacture lumber in Canada, having erected saw mills for that purpose; and Americans, who have bought timber to saw at their mills in the United States. Now, leaving out for the moment how the Canadians would be affected, let us consider the conditions in which the two classes of American buyers would find themselves. Two purchasers of timber limits, it may be situated side by side, commence to operate in our forests; one takes his product in the log to the United States, and has it admitted free of duty, while the other goes one step further in making the product of the forest marketable, and is on this account charged a duty of two dollars per thousand feet. This is a direct fine on the American who has transferred the sawing of his lumber to this country, which provides his raw material; it is an injustice which could be easily remedied by the Dominion government reverting to its former policy, and placing an export duty on logs; this is sought to be prevented by the retaliatory clause in the bill before quoted. It would savour somewhat of bravado to take up a challenge thus thrown down, and would bring about a deadlock in the business and strained relations with the United States, and is a remedy to be applied only as a last resort. We now have the honor of presenting to you in this resolution a much easier and simpler solution of the difficulty.

THE REMEDY.

"The government of Ontario, who sold the limits to both parties, and who were glad to welcome the Americans here to build their saw mills, owe them certainly some protection in their investments. They are in the position of partners with the purchasers, and have only sold the right to cut the timber subject to the payment of Crown dues, ground rent, and any other regulations considered necessary from time to time. It would seem, therefore, that the government cannot afford to allow an injustice of this kind to prevail against Americans sawing lumber in Canada, brought about by the action of a foreign government, without applying whatever remedy is in their power, and if this can be said in the interests of American citizens carrying on their business here, it applies with equal force to the citizens of this country. A claim has been made that it would be unjust or dishonorable for the government to take action now in limiting the disposal of the timber after selling, but it is well known that the power of making further regulations remains with the government. The conditions are published and read at the time of the sale, and are well understood, so that intending purchasers have a full knowledge of this latent power, which can only be excercised by a government for the whole people in their best interests.

"The most natural way to have rectified this inequality of conditions (which would have the effect of keeping the Michigan mills running at the expense of the Canadian) would be to revert to the old export duty of $2 per M. ft., imposed by the Dominion government, which was only taken off by the agreement of the two governments, and which every lumberman doing business on the lakes knew would be again imposed whenever the former American duty on lumber was reverted to. The framers of the Dingley bill have tried to make an export duty on logs impossible by the retaliatory clause, with a full knowledge of the injustice it would work, and cannot complain if it is met in a way to place all workers in our Ontario forests on an equal footing. The claim, therefore, that any action by the government of Ontario would be unjust interference with vested rights falls to the ground on both counts. First, the American purchasers of standing timber knew the conditions of sale, as they were proclaimed at the time. Second, they also knew that free logs to stock their mills were only obtained by agreement, and when the agreement ceased to be operative the export duty would again be imposed. The attempt to hinder the free action of the Canadian government by the retaliatory clause only makes the matter worse, and proves that a full knowledge of the situation was in the minds of those who were the real authors of the retaliatory clause. To offset, then, this inequality and injustice, the government of the province of Ontario is respectfully requested to pass an order-in-council to the effect that so long as the before quoted retaliatory clause remains the law of the United States, the Crown timber regulations shall be so amended that all pine timber cut under license in the province of Ontario shall be sawn into lumber or made into square timber in Canada; all of which is respectfully submitted."

Judicious advertising always brings good returns to the advertiser.

The Minister of Marine and Fisheries has notified the Ottawa lumbermen that there will be no further postponement of the law which has been enacted preventing the dumping of sawdust into the Ottawa river, and that it will come into force on the first of July next. This act was passed four years ago.

## REPORTS OF COMMERCIAL AGENTS.

THE last quarterly report of the Department of Trade and Commerce of Canada contains communications from commercial agents in which subjects of interest to the lumber trade are discussed. Under date of June 10th, Mr. J. S. Larke, of Sydney, Australia, writes :

"Reclamations have been made on another cargo of timber from British Columbia. They are made on two grounds. One is for interiority of timber. The amount under this head is small. The cargo as a whole was very good. If it had come to one buyer only it would no doubt have been accepted, but it belonged to several persons, and all the alleged inferior stuff fell to one shipper, and he demands compensation. The other demand is for delay in delivery through improper stowage. Instead of being placed in the ship so that each owner could get at his portion in turn, the several lots were so mixed that the owners had to keep their punts and laborers about the ship during the delivery, making the cost several times more than it otherwise would have been. Not having seen the cargo I am not personally aware how much the losses in this way may have been, but they are errors that may occur and should be prevented. The failure of a large San Francisco firm engaged in the timber trade of this colony is reported. It is charged, justly or unjustly, with cutting prices to the low ebb which now prevails in the effort to monopolize the trade. They may have been a factor in doing this, but only a factor. It seems to me wise to support the view advised in a previous report, that the British Columbia mill men should emancipate themselves from the San Francisco middle men. There are too many agents in the business, and as a consequence the San Francisco broker, through his agent here, and the Sydney indent merchant, representing the lumber from a common mill, are found competing against each other and cutting the price of products of the same mill. Under such circumstances demoralization in prices must occur."

One month later the same agent reviews the timber trade as follows :

"The price of rough merchantable Oregon continues very low. It has been brought here at 6s. 4d. per hundred feet, and one or two sales have been reported at 6s. 3d., which includes freight, insurance and brokerage. There are at present in the harbor two ships unloading timber from British Columbia. So far no exception has been taken to one, but damages have already been claimed on the other cargo. I went and saw it. Some spots of fungus growth showing dry rot appeared on some pieces. Otherwise the lumber was of excellent quality, and if properly stacked this fungus would disappear. However, an allowance will have to be made or a survey demanded. The market has been so spoiled by shipping practically clear lumber as rough merchantable, that ordinary rough merchantable will not be accepted as up to grade. One Puget Sound company is reported as having instructed its agents here to sell and guarantee all cargoes. It is selling at a very low figure and sending down very high grade stuff. There can be little profit at present rates to either shippers or importers under such conditions. Some who have hitherto imported are desirous of acting as agents for mills, preferring a commission instead of a possible profit. Very heavy loss results in the case of reclamation for defects in quality. On one cargo from the United States, the claim on which has only recently been settled, the direct loss was nearly six thousand dollars. There were some indirect expenses also, and both together were enough to prevent the mill from receiving anything for the cargo shipped. One or two firms who have done a large timber trade are endeavoring to secure agencies for Canadian mills, but it is probable that the low prices here may make the mills hesitate to take the risk of the trade. They could secure a much larger sale of dressed timber than is being done, as the relative high price of Baltic just now should create a larger demand for dressed Oregon as flooring and boarding. Some Oregon shelving has been sold here. It is used in cheap work instead of spruce."

Mr. Larke also refers to a shipment of carriage axles made from Gananoque, Ont. The goods are said to have been superior to a sample lot from Cleveland, Ohio, but the higher freight rates rendered the venture unprofitable.

Mr. E. Eustace Burke, Commissioner for Jamaica, under date of July 17th, says :

"America supplies large cargoes. The dressed descriptions are increasing in demand, and I consider the Dominion ought to share the supply. This latter remark will also apply to ready made doors, blinds and sash frames."

### PAVING BLOCKS.

The general commercial information in the report contains the following with respect to paving blocks :

Large quantities of wooden blocks are used every year in paving the streets of London. These blocks have so far for the most part come from Sweden.

On the 21st June the vestry of Marylebone, one of the parishes of London, passed the following resolution :

"That it be an instruction to the works committee to avail themselves of the present unique opportunity, when so many colonials, officials and others are in London, to confer with those interested to ascertain whether it is not possible to obtain equally serviceable material for wood paving within the British Empire as that now obtained from foreigners."

The specifications have heretofore called for the following :—

"The blocks to be of the best Swedish yellow deal and cut from Soderham or Gefle deals, and the channel blocks to be of the best memel timber, the whole to be sound, close-grained, free from sap, shakes, dead knots, decay or other defects, to be cut truly to the specified dimensions and to be in every respect fairly equal to the sample blocks deposited with your surveyor."

| | | | $ cts. |
|---|---|---|---|
| The prices paid per 1,000 for | 6"x3"x9" | blocks were | 32 24 |
| do. | 5"x3"x9" | do. | 28 23 |

A specimen of these blocks may be seen at this department. It would seem as if Canada might be able to participate in this, and intending exporters are requested to correspond with the High Commissioner and to send him sample blocks.

## NEW TIMBER CULLERS.

EXAMINATIONS for timber cullers were held by the Quebec government at Hull on the 11th of August. Out of 48 candidates 34 were successful, whose names are as follows : A. Yull, A. Normand, A. Adams, W. Adams, A. St. Amour, J. E. Lindsay, J. E. McIntosh, D. McGregor, J. Fraser, S. Buchanan, J. C. McMann, M. Donan, H. Brock, D. Bourgeois, I. Dupuis, W. F. Sims, G. J. Aren, C. M. Cheney, T. Desmarais, A. M. Adams, F. Jordan, J. Carty, J. Howard, J. B. White, J. F. McNamara, H. Link, H. Link, jr., R. J. Duff, D. R. Stewart, P. Baterlon, R. F. Grimes, A. Fadbout, S. C. Lawless.

## SECTION OF DOUGLAS FIR FOR KEW GARDENS.

DURING the past summer a beautiful specimen of Douglas fir was shipped from New Westminster, B. C., to Kew Gardens, London, England, the great botanical and forestry display centre. Referring to the photograph from which the accompanying illustration was made, Mr. John Sprott, of New Westminster, says : "The enclosed being but a camera reproduction of sketch, correctness in all detail is not guaranteed, but in the main a fair idea of the size of the tree is conveyed. The pole in the man's hand is 10 feet long, and if the diameter of section is set with this, 7 feet will be shown. The actual length of the tree was over 250 feet from ground to top, and 116 feet from ground to first limb. Owing to large roots at the base, the tree had to be felled some 8 to 10 feet from the ground to get a clear section, and as perfect in circle as possible. On the butt, measurement ran between 8 and 9 feet." The timber is said to be without knot or blemish, and will no doubt be the means of making known to European users of wood the wonderful forest possessions of British Columbia.

SECTION OF TREE SHIPPED TO KEW GARDENS, LONDON, ENGLAND, JUNE 3RD, 1897.

## THE SAW.

PLINY says that the saw was first invented by Dædalus, but according to Apollodorus, it was the invention of Talus, who used the jawbone of a crocodile to cut through a piece of wood, and then made an iron instrument in imitation of it. The saw is represented on the monuments of Egypt, from 2500 to 3000 years B. C. As early as A. D. 1327, sawmills driven by water power were in operation at Augsburg, and it is believed before this that they were in operation in Paris, driven by the current of the Seine. The first sawmill erected in the Norway pineries was in 1530. Sawmills were numerous in Italy in the sixteenth century. They were not introduced into England until 1663, when a native of Holland built one, but was compelled to abandon it by the opposition of the populace, carpenters and other artisans, who saw no good in such a new-fangled contrivance.—Journal of Building.

## LUMBERING IN NEW BRUNSWICK.

[COMMUNICATED.]

The south-eastern section of the province of New Brunswick is especially fortunate in having very fine facilities for getting logs and sawn lumber to the shipping port of St. John. Particular reference is made to the large number of navigable streams and lakes which are tributary to the River St. John, the principal of which are on the eastern side. First, the Kennebecassis, entering the St. John river five miles from that city, and navigable 20 miles, while logs are driven from 40 miles further; next, the Bellisle, entering the main river 20 miles from St. John, and navigable twenty miles, logs being driven 40 to 50 miles to this point; next, the Washdemoak, entering the main river 40 miles from St. John city and navigable 40 miles, and logs being driven from 60 to 70 miles further up; and last, but not least, is the Jemseg, 60 miles from St. John city, the outlet of Grand Lake and Salmon river. The Jemseg river is six miles long, narrow and deep, the left hand bank forming an acute angle with the St. John river and consisting of interval land which is covered with water at high spring freshets and a deposit left which is valued for fertilizing properties, the consequence being that the land is always rich and good hay crops are assured. The right bank is high land with well cultivated farms.

Grand Lake is about thirty miles long and eight or ten miles wide, with a large number of bays and points which make a trip on the steamer "May Queen" from St. John to Chipman one not soon to be forgotten. Upon arriving at the end of Grand Lake, Salmon river is entered and traversed ten miles, when the pretty little village of Chipman, the end of navigation on these waters, is reached. Chipman owes its existence to the energy and push of G. G. and W. C. King, the senior member of the firm having been the federal member for a number of years, and is now Senator. They do an extensive lumber and mercantile business in the village. Their saw mill is a double circular with patent edgar, lath machines, planers, etc., and is noted for doing an exceedingly fine class of work. They also keep some portable mills employed sawing for them. Chipman is at present the terminus of the Central Railroad from Norton on the I. C. R., thus giving an outlet by rail and water.

Three miles further up the Salmon river is the residence and business place of the chief log operator on the Salmon river, Mr. Hugh McLean. Mr. McLean has been selling his cut of logs in the St. John market, but decided a few months ago that a saw mill would be a good investment. He had the logs, a splendid situation for a mill, and the necessary capital, so operations were commenced, with the result that in a few days—or before this sees the cold type—the hum of the saw will be heard and the men will be employed in scowing the sawn lumber to the shipping port of St. John, instead of sending the logs down to be sawn there. This scheme will enable Mr. McLean to give continuous employment to a large number of men which previously he could only utilize during the winter months taking the logs out of the woods.

Mr. McLean handles about ten million feet per year, and also carries on a large general store and farms on an extensive scale, raising a large proportion of the supplies required in his lumbering operations.

The mill, of which we give an illustration, is nicely situated on the bank of the Salmon river, and consists of a single gang, patent edger, lath machine and planer. It is the intention to put in a circular saw and some shingle machines during the coming winter. The mill building is a splendid frame structure, three floors, with monitor roof. The boiler house and engine room is a brick building, metal roofed, making it fireproof. The engine was furnished by E. Leonard & Sons, of London, Ont., through their St. John representative, Mr. Geo. H. Evans, and is capable of extra heavy duty; the shafting and machinery by Waring, White & Co., of St. John; and the saws throughout by The James Robertson Co., Limited, of St. John. Mr. Thomas Quinlan has charge of the millwright work, and it goes without saying by those who know Mr. Quinlan's ability that the mill will be first-class in every respect.

Mr. Hugh McLean's Saw Mill on Salmon River, N. B.

The photograph of the mill, as shown, was taken before completion, but a mill man can, together with the description, form an idea of its present appearance.

## FUNGOUS GROWTHS.

A correspondent lately sent us a formidable fungus, asking for a remedy, says the Illustrated Carpenter and Builder. While we gave him a few words of suggestion or advice, the subject, being of interest to many readers, receives here a more general treatment. Purity of air cannot be maintained in a house unless it is thoroughly dry. Setting aside the not inconsiderable quantity of water produced by our own breathing, and by the combustion of gas, oil, and candles, the air of a house is liable to be rendered unwholesome from excess of moisture—first, by absorption of water from the rock or soil below, and, second, from the porous stone of which the building is constructed. Not only is the air loaded with moisture from these sources, but it is rendered impure by the exhalations of fungous vegetation or dry rot, which at the same time destroys the joists and other carpenter work, and seriously affects the stability of the house. It is a mistake to suppose, as many do, that dry rot attacks only the wood in the basement storey. It is a common occurrence for the ends of joists built into porous stone to become affected by fungous vegetation, and it is frequently seen in pulling down old tenements that the ends of the joists are quite gone, and that probably for many years the joists have been resting only on the plaster cornices of the rooms. The remedy is the use of "shoes" of glazed fireclay or other material, which are built into the wall, and into which the ends of the joists are placed. The "shoes" should be somewhat larger than the joists, which should be kept in position by wedges of wood, so that air can play freely around the ends of the joists. Such protected joists will last for hundreds of years if other circumstances are favorable.

## LUMBERING IN LABRADOR.

A party of lumbermen, including Messrs. A. L. Curry, James Calder and Thos. Whitman, of Bridgetown, N. S., have recently returned from Newfoundland and Labrador, where they have been investigating the possibilities of successful lumbering operations. Interviewed by a reporter, Mr. Curry stated that their work was but the preliminary of a large enterprise which the persons represented hoped to establish in Labrador next year. They have made application to the government of Newfoundland for the right to cut timber on 370 square miles of territory on the Kennamore, Kennamic and Hamilton rivers, which flow into Hamilton Inlet, one of the coast waters of Labrador. These limits comprise spruce, pine and hackmatac, the trees averaging about 70 feet in height. The conditions of obtaining the timber are the payment of two dollars a year rental for each square mile, and a bonus not yet settled upon. A company will be formed to operate these limits on an extensive scale. Portable mills will be used, which will be moved from place to place as the profitable lumber of each district becomes exhausted. It is intended to use steam power and to operate the mills the year round. The conditions prevailing in Labrador are such that for economic reasons the removal of the forests is a benefit even if the country were stripped bare. June is the season for stream driving. During March and April the snow falls to a depth of several feet, and as it melts swells the streams, rendering logging comparatively easy.

## ADVERTISING.

The necessity for advertising, which, reduced to its simplest terms, means making a business announcement, was present from the earliest times. Pompeii and Herculaneum had their advertisements painted on the houses, a form of publicity somewhat similar to our street sign, which is really the most primitive kind of an announcement, since it influences but the passer-by. The town crier was largely utilized in Greece and Rome. It was not until the advent of the newspaper, however, that the art began to show that there existed within it possibilities of growth and development. The newspaper furnished at once a natural advertising medium, a medium that could be carried home by the reader, and which did effective work because it was read at the fireside or in the study, instead of being painted on a single house or being bawled forth indistinctly by a crier.—Oscar Herzburg, in July Lippincott's.

One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

*TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## ANOTHER MEETING OF LUMBERMEN.

By reference to our advertising pages our readers will observe that a meeting of Ontario lumbermen and others interested in the lumber trade is to be held in the Board of Trade Building, Toronto, on Wednesday, October 6th, at 1:30 o'clock. The meeting has been called for the purpose of receiving the report of the committee appointed by the lumbermen to present a memorial to the Ontario government requesting that the pine timber regulations be so amended as to provide that all sawlogs cut in Ontario shall be manufactured within the province, and to take such further action as may be considered in the best interests of the trade. Every person who feels interested in these matters is invited to be present.

The importance of a large and representative attendance is fully recognized, and it is hoped that both pine and hardwood manufacturers and dealers, as well as limit holders, will be present in large numbers. The date is well chosen, in view of the reception to the Premier and the consequent reduction in railway fare.

It is hoped that lumbermen will come prepared to discuss the questions before the meeting in an intelligent and reasonable manner, and the opportunity will be given to every one present to state his views or ask information on any point. Let the trade unite in making this the largest and most representative meeting of lumbermen ever held in the Dominion.

## THE POLICY OF OUR RAILWAYS.

MUCH discussion has of late been given to the subject of extending our lumber trade with Europe and other foreign countries, and arguments both favorable and otherwise have been presented. The person who predicted any great increase in the volume of this trade has frequently been reminded of the fact that railway freight rates are too high to permit of profitable business being done in many classes of goods. This is probably the greatest barrier which the lumbermen, especially those in Ontario, have to face. In Quebec and the Maritime Provinces, where the distance to the point of loading the ocean vessels is not so great, this objection becomes less serious. Our remarks will, therefore, apply more particularly to Ontario.

If our export trade is ever to assume large proportions, the lumber industry must receive greater consideration at the hands of the railway companies. Their first step should be in the direction of reducing the rate on lumber from Georgian Bay points to Montreal or New York, in order that the manufacturer in western Ontario may be placed at less disadvantage than at present in competition with the eastern manufacturers.

We are not overlooking the fact that the consuming power of any market is limited, and that an overstock is certain to depreciate prices. This brings us to the point which we desire to emphasize, namely, the necessity of increasing our trade in manufactured goods, such as sash, doors, box shooks, flooring, blinds, and dozens of other lines. But the railway companies have in the past pursued the short-sighted policy of discouraging this class of business, by charging an excessively high rate. Our largest planing mills are located near the centre of the province, the districts surrounding which have been denuded of their timber. It then becomes necessary to bring the raw material from the limits many miles distant, have it manufactured into doors, etc., at the mills, and re-shipped to Montreal for loading on ocean vessels. The railway companies get two rates on the material, one on the rough stock to the point of manufacture, and another on the manufactured goods to the point of shipment. Instead of making these combined rates equal as nearly as possible the through rate from the first point of shipment, the charge in many cases is greater by one-half. The rate on manufactured stock, such as sash and doors, is nearly double that of ordinary sawn lumber, a discrimination against the former which seems to us unjust.

It is now possible to dispose of all our good lumber with little difficulty; the question to be solved is the profitable marketing and utilization of the lower grades, and to this end our efforts should be directed. There is an immense market in the European countries for manufactured and partially manufactured goods, and with lower carrying charges Canada would be in a position to secure a large share of the trade, and the coarse lumber which now realizes little more than the saw bill would produce better returns to the manufacturer, besides providing employment for Canadian workmen. We hope in the near future to witness such changes as will warrant the investment of more capital in manufacturing plants.

## WHY NOT ORGANIZE?

THAT the hardwood manufacturers of Ontario do not expect to receive much attention from the existing association of lumber manufacturers is evidenced by the letter in another column from the pen of Mr. J. E. Murphy, who suggests that a meeting be called without delay to organize an association of hardwood lumbermen. When reference was made to the hardwood trade at the convention in Toronto last month, in the form of a query from one of the gentlemen present, he was assured that in future that branch of the industry would not be overlooked.

The association as at present existing is composed almost exclusively of pine manufacturers, who operate on an extensive scale, and whose interests are not identical with those of the hardwood manufacturers, composed, as they are, of persons cutting annually from a few hundred thousand feet to three or four million feet at the most. Many questions affecting one section would not be applicable to the other. It would seem necessary, therefore, if the hardwood trade is to be affiliated with the present manufacturers' association, to organize a hardwood section, to be made up of manufacturers and dealers in hardwood lumber, the latter probably as honorary members. But the manufacturers' association cannot be credited of late years with being a live organization, and unless greater effort is put forth by its members, the hardwood trade would probably best serve its own interests by organizing as a separate association.

There is an abundance of work to be done by such an association, as, for instance, in endeavoring to secure a reduction of the freight rate on hardwoods. Why the railway companies charge a higher rate on hardwoods than on pine no one has yet been able to explain. It is possible that if the matter was presented to the management of the railways by a strong representation, and the injustice of the discrimination pointed out, a reduction in the rate might be obtained. The association might also direct its efforts to securing uniform inspection rules, the necessity of which has long been admitted.

## THE NEW TIMBER REGULATIONS.

THE announcement has been going the rounds of the press that the Ontario Government, at a meeting of the Cabinet held on Tuesday, September 21st, decided to take no action at present to compel the manufacture of saw logs within the province. The statement appears not to have been well founded, as no action was taken by the government in regard to the matter. Timber licenses are issued and expire on the 30th of April in each year, and it is therefore not within the power of the government to apply new regulations for licenses issued for the present

season. This was pointed out at the recent convention in Toronto. Any new conditions imposed could only apply to licenses granted after the 30th of April, 1898, and as to this step the government has not yet announced its policy.

An important decision was reached at the meeting in regard to alien labor, the provisions adopted, and which are printed in another column, providing for the employment only of Canadian workmen and materials in the cutting of the timber. There is ground for satisfaction in this action. It is a step in the right direction and evinces an apparent desire on the part of the government to protect the rights of Canadians. But the lumbermen of Ontario find no relief in the new regulations, the enforcing of which is likely to be found difficult. They may operate slightly in favor of the Canadian workman when once he has succeeded in proving his nationality; failing to do this, he will be regarded as a foreigner and refused employment.

Acting on the resolution passed at the meeting of lumbermen in Toronto, the committee appointed waited upon the goverment in due course and presented their views, and were promised the usual consideration. On the 7th of September an opposition deputation was heard. This was composed largely of United States owners of timber limits, and included Hon. J. T. Rich, of Detroit; Joseph Turner, Bay City, Mich.; D. Coulter, Grand Haven, Mich.; Albert Pack and W. L. Churchill, Alpena, Mich.; F. Pitts, Detroit; E. Searle, Duluth; C. E. Mould, Cheboygan, Mich.; Mr. W. A. Charlton, M.P.P., and Mr. John Charlton, M.P., of Lynedoch, and several others. The interview was secret, and the points considered can only be judged by the composition of the deputation.

What action the government will take remains to be seen. There are two distinct factions, the one being composed of the Georgian Bay manufacturers and a portion of the Ottawa Valley lumbermen; the other comprising the Michigan lumbermen interested in securing Canadian saw logs, and perhaps the greater portion of the Ottawa lumbermen. Each have presented their arguments, and now await an announcement from the provincial authorities. It is not reasonable to suppose that the interests of the Canadian lumbermen will be allowed to suffer.

## EDITORIAL NOTES.

The destruction by fire of two large saw-milling establishments has taken place within the past fortnight. The loss to the St. Maurice Lumber Company, of Three Rivers, Que., exceeds $50,000, but is largely covered by insurance. The mill of the Hull Lumber Company, at Hull, Que., which was burned on the 20th inst., was one of the most complete establishments in Canada, and was valued at $100,000. The company will operate their second mill day and night, and by this means hope to make a fair season's cut. Nothing definite as to rebuilding has yet been decided. Should the government impose an export duty on logs, it is probable the company will not rebuild.

We have watched with much interest the growing favor accorded to American white pine doors in foreign markets, and especially in Great Britain. When once introduced, they are said to become a fixture. Numerous inquiries received at this office requesting the address of Canadian manufacturers of these goods show that British importers are desirous of extending their trade in this direction. The latest enquiry comes from Mr. J. J. Bone, of Salisbury road, Plymouth, England, who writes as follows: "I am anxious to obtain the address of some Canadian firms who manufacture doors, mouldings, etc. Can you favor me with the address of same?" The Lumberman has a wide circulation in the foreign markets, and manufacturers of stock for export should keep their announcements before the trade.

The increasing employment of iron and steel for building purposes has been the means of displacing enormous quantities of timber. Buildings are now erected in which the wood used forms but a small factor in the materials. The advantages claimed for iron and steel construction are greater strength and better fireproof qualities. Recent fires have demonstrated that this method of construction has not proven as satifactory as was expected, supposed fireproof buildings being completely destroyed. It will be interesting to lumbermen to learn that in some places a return to timber has been made. In Pittsburg, Pa., architects have become dissatisfied with iron and steel for floors of large buildings, and are specifying 2 × 12 joists, placed on edge, and spiked together so as to make a solid floor 12 inches thick. On this is laid a double floor in the usual manner. A large building in that city in which this class of floor was used was recently burned, but the floor is said to have resisted the fire, the effect being simply to convert the outside of the wood to the depth of an inch or so into charcoal. Should this method become generally adopted, it would result in great benefit to the lumber trade.

Commenting on the question of an export duty on saw logs, the Winnipeg Commercial says: "The pine resources of the United States are nearly exhausted, and in a few years the people of that country must get their lumber from us, tariff or no tariff. But, in the meantime, the fight would paralyze or seriously disturb the Canadian lumber trade, and it is a question if it will not be better to let nature work out the problem." In an attempt to prove the independence of the United States, the Lumbermen's Review, of New York, points to the statement of the Clerk of Forestry of Ontario that the manufacture of white pine will be a permanent industry, inasmuch as it is now conceded that pine timber can be reproduced as a crop. But our contemporary overlooks another important statement made by the same authority, namely, that white pine, even under favorable circumstances, requires forty years to obtain a marketable size, while it would be more profitable to allow the trees to attain a greater growth. No practical system of forestry has yet been commenced by the United States, and it is admitted they have only about ten years' supply of white pine. When that becomes exhausted, they will find themselves entirely dependent upon Canada, as their forests are now too far denuded to permit of any reforestation which would be likely to produce sufficient timber to be of much service to the country.

I have often heard it stated that no hardwood logs of any consequence are taken from Ontario to the United States, and when talking with Mr. O. G. Anderson, of the Anderson Furniture Company, of Woodstock, last month, mentioned this matter to him. He appeared surprised that this impression should prevail. "Why," said he, "there are large quantities of elm and basswood logs taken from the vicinity of the St. Clair river to Detroit—millions of feet, all of which is required in this country for our own manufacturers. Unless some steps are taken to prevent the export of the same, Canadian industries will in a very few years be compelled to close down for want of raw material. We already find some difficulty in getting suitable timber." Mr. Anderson explained that each year his company use some five million feet in the manufacture of furniture, much of which is exported to Europe. I was impressed with the magnitude of his business, and could not but reflect upon the greater benefits the country derived from five million feet of timber manufactured into furniture and the same quantity exported in the log to the United States. For every thousand feet ten dollars of money is circulated throughout the country by the first method to every dollar spent in merely getting the logs out of the woods and floating them across the border, to build up saw mills and wood-working establishments in Michigan.

* * *

Talking with a lumber dealer not long ago, the subject of advertising was touched upon. He was a staunch believer in printers' ink, but took occasion to dwell at some length upon the amount of advertising placed where no adequate returns could be expected. Others have no doubt observed the same thing. Advertising is like every other detail of a business, it requires to be given the same careful attention. Results cannot be expected if advertisements are placed in mediums that do not reach the class of customers desired, as is too often the case. Some of the largest advertisers do not err in this direction, but render their advertisements less valuable by allowing the same copy to be used, perhaps, throughout the whole year. It assumes a stereotyped appearance, and is more likely to be overlooked by the average reader. If I were an advertiser, my first step would be to choose the most suitable mediums; this being done, I would furnish a change of "add" for every issue, or nearly so. By this method the advertisement pages would soon become as attractive as the reading pages, and would be as carefully read. The dealer of whom I have spoken referred to lumber, in which we were both, perhaps, most interested. "Do you know," he said, "I cannot understand why more lumber manufacturers do not make known, through The Lumberman, what stocks they have for sale. This would be of great assistance to dealers, especially in the case of hardwoods, which are so scattered that we have often to travel from one place to another before we find what we want." This suggestion is worthy the consideration of enterprising mill men.

# THE RETAILER AND Wood-Worker

## METHODS OF FINISHING WOOD.

Wood finishing is the process of applying to the surface after it has been prepared, by filling and smoothing or otherwise a thin coating of varnish or other substance to render it durable, enhance its beauty or change its appearance. There are numerous methods of finishing, says a writer in one of our exchanges, and a variety of materials are used, the varieties of varnish being the principal. In their natural state all woods are more or less porous, consisting of bundles of hard fibres, with interstices filled with softer substance. These constitute the grain, and, as the hard or soft predominate, the wood is said to be hard, fine or close grained, or soft and open grained. To fill these softer parts or pores and give to the whole an even, uniform surface, hard and capable of a brilliant polish, is the object of the finisher's art. This hard, firm surface was formerly gained by the successive application of several coats of varnish, at least three preliminary coats being required to fill the pores; the inequalities were then reduced by fine sand or glass paper, and several additional coats laid on; the last, after becoming hard, being polished, if desired. In this operation, however, a great quantity of varnish is absorbed by the open pores of the wood, and it is consequently so expensive that it is now seldom used. Recourse is therefore had to various plans to render the wood non-absorbent before applying varnishes, and certain compounds called "fillers" are largely used for this purpose.

Richness of effect may be gained in decorative woodwork by using woods of different tone, such as amaranth and amboya, or inlaying and veneering. The Hungarian ash and French walnut afford excellent veneers, especially the burls or gnarls. In varnishing, the varnishes can be toned down to match the wood, or be made to darken it, by the addition of coloring matters. The patented preparations known as "wood fillers" are made in different colors for the purpose of preparing the surface of wood previous to the varnishing. They fill up the pores of the wood, rendering the surface hard and smooth. For polishing mahogany, walnut, etc., the following is recommended: Dissolve beeswax by heat in spirits of turpentine until the mixture becomes viscid; then apply by a clean cloth, and rub thoroughly with a flannel or cloth. A common mode of polishing mahogany is by rubbing it first with linseed oil and then by a cloth dipped in very fine brick dust; a good gloss may be produced by rubbing with linseed oil, and then holding trimmings or shavings of the same material against the work in the lathe. Glass paper, followed by rub soap, dyed oil, sulphate of iron, nitrate of silver exposed to the sun's rays, carbonate of soda, bichromate and permanganate of potash and other alkaline preparations, are used for darkening the wood; the last three are specially recommended. The solution is applied by dissolving one ounce of the alkali in one pint of boiling water, diluted to the required tone. The surface is saturated with a sponge or flannel, and immediately dried with soft rags. The carbonate is used for dark woods. Oil tinged with rose madder may be applied to hardwood like birch, and a red oil is prepared from soaked alkanet root in linseed oil. To give mahogany the appearance of age, lime water used before oiling is a good plan. In staining wood the best and most transparent effect is obtained by repeated light coats of the same. For oak stain a strong solution of oxalic acid is employed; for mahogany, dilute nitrous acid. A primary coat or a coat of wood filler is advantageous. For mahogany stains use two ounces of dragon's blood dissolved in one quart of rectified spirits of wine, well shaken, or raw sienna in beer, with burnt sienna to give the required tone; for darker stains, boil one-half pound of madder and two ounces of logwood chips in one gallon of water. A solution of permanganate of potash forms a rapid and excellent brown stain.

## GOOD MATERIALS FOR THE ROOF.

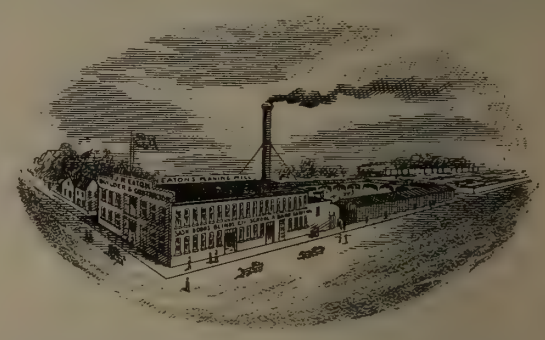
If you are ever called upon to advise a farmer about the shingles for his barn, writes C. H. Ketridge in the Mississippi Valley Lumberman, don't ever urge him to buy a cheap grade of them. These will do for the smaller and cheapest of buildings, but where a man is putting up a building that is worthy the name of a barn, a good roof is a most indispensable feature about it.

Another thing about the roof is the sheathing on which is nailed the shingles. I want you to remember this point particularly, for if you use it right it will often turn the scale in your favor in the selling of a bill. There is a prevalent idea among farmers, and lumbermen also, that anything in the form of a board will do to sheath a roof with. A more mistaken idea don't exist than this, and I'll tell you why. The roof of a building has to sustain the roughest usage from the weather of any part of it, consequently it ought to be of the best material and strongest construction. What is it that keeps shingles on a roof? Nails. What keeps nails in the boards? Friction. What lessens the friction about the nails? Shrinkage of the board. It follows then that the boards should be as dry as possible and a full inch in thickness. More would be better, but as we have to take it as the mills saw it for this western market, the ordinary undressed board has to serve. There is nothing better to nail shingles onto so they will stay on than a hemlock board, but not having that, good norway pine or even heart yellow pine is better for that purpose than the common No. 3 board with its doty streaks in it, for whenever a nail goes in one of these places it might as well be out, as for all the good it is. And if it is so with a No. 3 board what kind of a roof has a man got that has had a No. 4 board sold to him for sheathing? And that is the grade that is usually figured on for that purpose unless the customer knows what he wants in this regard, and insists on having it. But most of them don't know, or they can't see any difference in the grades of boards when in the rough. Therefore, I say to you who have never thought of it, that it will often prove to your advantage if you convince that man that you are giving him the best board for his roof sheathing, for everyone can be easily shown why he should have a good roof.

## PLANING MILL OF J. R. EATON.

Mr. J. R. Eaton, of Orillia, is widely known throughout Western Ontario as a builder and contractor. Although born in Ireland, he came to this country when a child, removing to the United States at the age of seventeen years and learning the building trade. A few years later he returned to Canada, locating at Orillia, where the foundation of his present business was commenced.

In connection with his contracting business,



Mr. Eaton operates a large planing mill, which is shown herewith. The factory, which was first erected in 1887, now consists of a two-storey metallic-covered frame building, 60x115 ft., with brick engine room and dry kilns. It is fitted with the latest designs of wood-working machinery, and every facility to meet the demands of his extensive trade. The stock rooms are always well filled with finished work. Mr. Eaton has a very commodious and beautifully finished office.

A Canadian cabinetmaker spent a year's spare moments making a card table, which he sent to Queen Victoria as a diamond jubilee present. There are 10,050 pieces of various kinds of wood in the table, so arranged as to produce marvelously beautiful effects.

Having used a variety of packing for gauge glasses, I think if those who report trouble with their glasses breaking would try some of the kinds which have a rounded inside surface or some of the various moulded rings advertised, they would avoid that trouble in future—always provided that the breakage was caused by the gasket, which is far from being always the case. Even if the fittings are a little out of alignment the rounded inside is preferable and may save a break, as the surface in contact is not subjected to so much of a bending strain.—Power.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

GRINDSTONES FOR SALE.—540 stones, nineteen tons, twelve dollars per ton, or offer for lot GEO. WEBSTER, 507½ Yonge St., Toronto.

WANTED.

PARTY WHO THOROUGHLY UNDERstands the Box business, who can command trade. State salary expected and experience.
Address "W," care CANADA LUMBERMAN.

FOR SALE.

**500,000** FEET BASSWOOD, SOFT ELM, Soft Maple, Ash, Beech and Butternut. RIGAUD SAW MILLS, Rigaud, P. Q.

SITUATION WANTED.

BY EXPERIENCED PINE AND HARDWOOD Lumberman, as Buyer, Salesman or Inspector. Satisfactory references; low salary. Address
T. W. WALKER, 16 Beaconsfield Ave., Toronto.

FOR SALE.

ONE 66" CIRCULAR SAW RIG, WITH LARGE edger, trimmers, slab tables, shafting, engine and boiler; will be sold cheap for cash, or will exchange for lumber. For particulars apply to
THE WM. CANE & SONS MFG. CO., Limited,
Newmarket, Ont.

## MILL FOR SALE

SITUATED ON SALMON RIVER, VIC. CO., N. B, consisting of six Shingle Machines, Rotary Gang Edger, Lath Machine and Clapboard Machine. Water Power, with a never-failing supply of water. Will cut the present season four million of deal, sixteen million of shingles and four million of lath.

There are 100,000 acres of timber land under lease, well stocked with cedar, spruce and hardwoods, to supply the mill with lumber. The mill property consists of 100 acres of land.

On the above property is a large store storehouses, boarding-house, blacksmith shop and a large stable. There are also six tenement houses. An electric light plant lights mill store blacksmith shop and stable.

This property is situated in the parish of Drummond Victoria county N.B. seven miles below Grand Falls., For further particulars enquire of

STEVENS LUMBER CO.,
Grand Falls, N.B., or Fort Fairfield, Maine.

FOR SALE.

**15,000** FEET OF 1 INCH TO 2½ INCHES red oak mill culls and better; also 10,000 feet of 1 inch elm mill culls and better, at Steele & Gibson's mill, Humberstone, Ont.
J. A. STEELE, Box 162, Humberstone, Ont.

SITUATION WANTED.

WHITE PINE LUMBERMAN, LONG EXperience in yard management, shipping, inspection, log scaling; good references. Address
R. I. CLARKSON, Parry Sound.

WANTED FOR CASH.

FOR PROMPT DELIVERY: 10 CARS 1", 6 cars 1¼", 2 cars 1½", 1 car 2" black ash firsts and seconds; 3 cars each 1", 1¼", 1½" soft elm firsts and seconds; also 1 car each 3 x 3, 4½ x 4½, 5 x 5 soft elm squares 8 feet and up long, firsts and seconds. If you can furnish any of the above, state dryness, freight rate to New York, and full particulars, quoting lowest price per M ft. Address, P.O. Box 2144, New York City.

### CURRENT TRADE CONDITIONS.

ONTARIO

The white pine trade has developed no new features since last writing. Sales have been confined to small lots of first-class stock for the Eastern States, and an average volume of local trade. Prices in the United States markets have not yet advanced to the point where dealers are willing to pay the import duty of two dollars on Canadian lumber, while prices at the mills are now so low that manufacturers cannot possibly hold out any inducement to the American buyer in the shape of a cut on present quotations. It is encouraging to learn that in the Ottawa valley considerable stock that has heretofore been marketed in the United States is being advantageously placed in the British market, and large purchases are looked for this fall by the representatives of British houses. Logging operations both in the Ottawa valley and the Georgian Bay district are opening up more freely. Information from Parry Sound is to the effect that as many logs will be taken out this winter as last, but many of these will no doubt be offered for sale to Michigan manufacturers, unless some action to restrict the export is taken by our government.

From what can be learned there is an increased demand for hardwoods. The furniture factories of the Eastern States are purchasing liberally, especially of elm, and are paying the two dollar duty in addition to current quotations. For bicycle stock there is also some enquiry, and purchasers find difficulty in getting suitable material. Other lines of hardwoods are in moderate demand, with basswood and ash strengthening.

QUEBEC AND NEW BRUNSWICK.

Ocean freight rates continue to stiffen, and form the chief subject of coversation by the trade. Shippers have decided to hold goods over for spring shipment, rather than send them forward at present rates and take chances of making a favorable sale. There is, of course, a quantity of stock going forward to fill contracts. Buying in New Brunswick is featureless, and manufacturers are inclined to view the outlook as discouraging. This will probably result in light operations in the woods the coming winter.

MANITOBA AND BRITISH COLUMBIA.

The outlook in Manitoba and the Northwest continues favorable. The farmers are marketing their grain, and are receiving therefor sufficient money to enable them to discharge all obligations and still have a balance left. This balance is being used in many cases to carry out needed improvements to buildings, and to erect new barns, residences, etc. For such work considerable lumber is required, and dealers report a steady increase of demand. A stimulus has also been given to manufacturing throughout the province, another source from which the lumber trade is deriving some benefit. In British Columbia the chief feature is the number of enquiries from the east for red cedar shingles. Mills that have been closed down for some time are resuming operations, with sufficient orders to keep them running for some time. As winter approaches local trade shows signs of inactivity.

UNITED STATES.

The increase of lumber demand is confined to the Western and Southern States and to the rural districts, the towns and cities being slow in showing any improvement. The consequence is that coarse stock is most asked for. Advices from the yellow pine markets are to the effect that manufacturers are loaded with orders, and prices are advancing rapidly. This has assisted the white pine trade, which has of late years suffered severely from competition from southern woods. Manufacturers at lake points have added $1.50 to the purchasing price of piece stuff, but wholesale dealers have only made a gain of 50 cents upon similar quotations. Manufacturers were prompted to make the advance by the number of eastern buyers who have visited lake points looking for stock, and the fact that dimension and common inch lumber is scarcer than for many years past at this season of the year. There has been some enlargement of demand throughout the Eastern States, but the fall trade is not opening up as was expected. Some Albany dealers have lowered their quotations for box lumber, on which an advance of from fifty cents to one dollar per thousand was made, and are offering stock at former quotations. At New York trade is looking up under an improved building outlook. Buffalo and Tonawanda dealers have visited Michigan points, and found that lumber which was formerly shipped east is now being marketed in the western states.

The hardwood trade is said to be showing a steady gain. Dealers are holding prices firmly, and there is sufficient business to warrant this step. Carriage and wagon stock is moving freely, and the car builders are doing more work. The furniture trade is steady, and shows signs of improving at an early date. Basswood is stronger, and an advance of one dollar has been made on common stock within the past month. Birch and elm also hold good positions. The demand for rock elm for bicycle purposes is increasing.

FOREIGN.

The late auction sales at London, Eng., showed that prices of Canadian goods in that market are not losing ground to the extent surmised, notwithstanding the heavy import. Some forced sales of spruce deals have been made, necessarily at cut prices, but those who are best informed maintain that there is little cause for anxiety as to future values. The Timber News predicts that in January next prices will be higher than at the present time. The fact remains that Canadian spruce shippers have overcrowded the market, and only a very active consumption has prevented a marked decline in prices. The engineers' strike continues to seriously affect business, and seems no nearer an amicable settlement than when first inaugurated. Unless brought to a close, it promises to have an injurious effect upon first open water business. At Liverpool there are numerous enquiries in the market for both square timber and deals, including Quebec red pine. Manchester dealers are holding out for spruce deal prices, and hope before long to be able to advance values. The timber trade at Glasgow is active, and each year shows a great increase in consumption of Canadian goods. There has arrived at that port this year 38,000 standards of deals and boards.

### SATISFACTORY RESULTS.

A gentleman who recently inserted a small advertisement in the Wanted and For Sale Department of the WEEKLY LUMBERMAN, writes: "You may cancel the advertisement I have in your paper. Please send me in bill for same. Have had quicker and better returns than anticipated."

## STOCKS AND PRICES.

### CANADA.

The barque Professor Johnston is at Batiscan, Que., loading a cargo of lumber for the United Kingdom.

H. B. McLellan, of St. John, N. B., has left for Labrador, with a complete lumbering outfit, to commence operations there.

Mr. W. H. Pratt, of the Conger Lumber Co., returned recently from Michigan, and reports an advance there in the price of all kinds of lumber.

John Hale, of Draper, has secured a contract for taking out saw logs and shingle timber for Mickle, Dyment & Co., near Fraserburg.

J. R. Warner & Co. and A. Cushing & Co., of St. John, N. B., have chartered five vessels to carry 4,5000,000 feet of lumber to South American ports.

Robt. Connolly, of Eau Claire, Ont., is putting in a square timber camp on east side of Lake Wahnapitae, on a limit purchased at the last government sale.

There are in the booms at South Bay, St. John, N. B., at the present time upwards of 80 million feet of logs, the largest quantity ever held there at one time.

Messrs. R. H. Klock & Co., of Klock's Mills, Ont., do not fear the United States lumber duty. They are increasing their operations in the woods by 40 per cent. as compared with last year.

Michael Sheridan, of Montreal, who purposes erecting a saw mill at Aylmer, Que., next spring, is negotiating for the purchase of timber limits near Mattawa from the Quebec government.

A dispatch from Bay City says: During the past few days 5,750,000 feet of logs have arrived for the Holland & Emery Lumber Co., of Tawas, to be sawed here; 2,986,200 feet for Edhole, and 3,453,556 for Alger, Smith and Co. The tugs Manistique and Protector are off Thunder Bay Island with a monstrous raft of 67,000 pieces.

The following timber berths were sold at the Crown Lands Office, Fredericton, N. B., last week: Cow Brook, branch of N. W. Mill stream, 3 square miles, sold to T. B. Winslow at the upset price of $8 per mile; Little South Branch, Tomogonops river, 7¼ square miles, to J. H. Barry, at $81 dollars per mile; McDonald's brook, branch of Barnaby river, 2 miles, to T. B. Winslow, at $61 per mile; head of Jaquet river, 2 square miles, sold to applicant, Jas. T. Doyle, at $66 per mile.

On Friday, September 17th, the last joint of lumber for the season was rafted at the Mitchell boom, in New Brunswick, and numbered 29,594. The Fredericton Boom Company have closed the season's operations much earlier than usual, with a record of about 64,000 joints, or upwards of 163,000,000 superficial feet. Over 34,000 joints were rafted at the Douglas boom. Seven tug boats were employed towing rafts to St. John, and ten tugs of a smaller class about the booms. About 140 rafts were towed below and four remain to be taken. Over ninety rafts will be handled by D. D. Glasier & Son and fifty by Tapley Bros. The conditions were unusually favorable for rafting, but heavy winds somewhat interfered with towing.

According to the Parry Sound Star, the Conger Lumber Company have decided to cut twenty million feet of saw logs this winter, and the contracts have been let to Messrs. Jacob J. Joliffe and Thomas Wilcox. David and William Argue have also received instructions to go into the woods, and their two camps will be put in operation, one now and the second one later. Mr. Wm. Peter is starting two camps and may open a third. The Delta Lumber Company has two camps and may add two more, and the Holland and Emery Company are putting in their full complement of camps. Messrs. McCormack and McLeod already have two camps in operation and will probably have more, and there are many jobbers' camps to be established in different parts of the district.

According to a correspondent of the St. John Sun, A. Fraser & Son., of River du Chute and Fredericton, have been prospecting on Green River, Madawaska Co., looking for an operating locality for the concern this winter. Possibilities seem favorable, and they may do their lumbering about 60 or 75 miles up, on the lands of the Muskoka Lumbering Co. They expect to do a heavy winter's work, and will not be kept back by the fall in lumber. They will also get out a million and a half on the Keswick. Some of the operators on the Tobique have already gone in. It is said that McNair will handle ten millions, as against six millions last year, and Hale may get out an equal amount. It is thought that smaller operators will consider lumber too unsafe to go into business extensively.

### FOREIGN.

It is stated that C. K. Eddy & Sons, of Saginaw, Mich., will not lumber in the Georgian Bay district this winter, but will purchase the logs necessary to keep their mill running.

A large quantity of hardwood logs will be put in this winter in the vicinity of Saginaw, Mich., as the demand there for hardwood lumber is active and stocks are exceedingly low.

At Philadelphia the demand is chiefly for cheap inside finishing stuff. Retailers are purchasing more liberally, and there appears to be a general desire to carry larger stocks in cheap building lumber, especially white pine.

At Bay City, Mich., box lumber has strengthened and is held at from $8 to $8.50. Norway piece stuff is in active demand at $8.50 for short lengths and $9 for all over 18 ft. long. Log run white pine is held at $14.50 and upward.

Log rafting from the Georgian Bay to Bay City has ceased for the season. There have been received at Alpena nine rafts, containing 36,000,000 feet. The logs were for Gilchrist, Fletcher & Sons, Albert Pack and the Hardy Lumber Co.

Piece stuff appears to be advancing in nearly all the markets. At Manistee, Mich., some holders of stock are asking $10.50, and are not even pressing sales at that price. Common inch pine has also advanced at Manistee, while shingles are scarcely obtainable at any price.

Barn boards 6" to 12" wide, boxing, common and shippers, are the classes of lumber most asked for at Tonawanda. The export trade is showing more activity both as to orders and enquiries. Cutting up is improving and 8-4 and thicker selects and uppers are meeting with ready sale.

Shingles and lath continue to become scarcer at Buffalo and Tonawanda. Repair work is taking all of that sort of stock that can be found. In other lines there has been no advance in prices as yet. The R. Laidlaw Company received a cargo last week from Duluth and will receive about 5,000,000 feet more from there this fall.

The red cedar shingle situation continues to attract attention, and every available machine has been put in operation on the Pacific coast. Three months ago these shingles sold at 95 cents at the mill; to-day $1.35 is the selling price, and manufacturers are unable to supply the demand. It would be well, however, to proceed cautiously, as it is predicted by many that present prices cannot stand.

The Northwestern Lumberman says with repect to hardwoods: The general hardwood trade is feeling the demand which is coming from resumed industries. Reports from wholesale points are to the effect that the call for lumber is active, and the amount being shipped to manufacturing points is increasing. The bulk of dealings is in oak, though cottonwood, basswood, poplar, ash, etc., are in larger request than earlier in the season. The yellow fever quarantine is hindering shipments from the infected districts.

Large sales of lumber continue to be made at Menominee, Mich. Haynes & Co., of Buffalo, last week purchased a million and a half of log run lumber from Case & Taylor; Albany parties bought 800,000 feet of thick select stock from the Holt Lumber Co., of Oconto; and several million feet of box lumber have been sold to eastern parties. There was also shipped from Perley, Lowe & Co.'s yards half a million feet of deals consigned to the Imperial Lumber Co., of Toronto, for export to Europe. This stock is high grade lumber, and is the first of its kind ever shipped from Menominee.

The following sales are reported from Duluth, Minn.: Nearly three millions of log run stock have been sold to go east, and 300,000 feet of good lumber has been sold to go to Tonawanda. Tonawanda has also bought 1,300,000 feet of 8, 10 and 12 inch stocks. Six hundred thousand feet of 12 inch No. 3 boards have been sold to the eastern market, and 750,000 feet of No. 3 boards have been sold to go to Buffalo. One small lot of 400,000 feet of 12 inch has been sold to New York parties; also 300,000 feet of box shorts have been sold. As far as we can learn Chicago has bought nothing lately, with the exception of 750,000 feet of strips, which sale was reported last week.

## CANADIAN TIMBER AT LONDON.

Messrs. Churchill & Sims, wood brokers, of London, Eng., offered a large quantity of Canadian goods at their last auction sale. Referring to the result of the sale, the Timber News says:

The unsorted red pine ex Ormiston was the first stuff to attract attention. Some of our Quebec friends were able to judge what a lengthy specifications meant in these times in such an article as red pine. It will be noticed that the 13 x 3 x 9 lumber only got £7 10s, whereas 3 x 8 fetched £8 to £8 5s, and the 3 x 7 £8 15s. If similar lengths had been offered in 3 x 9 as were offered in battens, the deals would have got £10 to £10 10s. Lower Port birch planks were not sought after, the demand at the present time being very light indeed. The 1st spruce boards ex Glenmoor, from Quebec, 12 x 1 x 9/10, reached £9; 7/8 in., £8; 4/6 in., £7 15s. The Brookside, 1st Breakey spruce 12 x 3 x 9 went at £9 5s for one lot, and £9 for three lots, all to a "pocket-order" bidder. The Daybreak, from Quebec, 3rd pine, 13 x 3 x 9, did well at £8. The unsorted spruce boards ex Mistor, from Quebec, taken all round, did well also. The Atkinson 1st spruce ex Fitzclarence at £9 for regular 3 x 9, could not have been satisfactory to the importer; the 3rd and 4th regular pine, however, fetched their full value at £9 5s and £7 10s respectively. The goods were very heavy. The 3rd spruce regular 12/13 x 3 x 9 ex Maylands, from Quebec, only found £7 5s.

## CHURCHILL & SIM'S CIRCULAR.

The last circular from Churchill & Sims, London, Eng., says: From the St. Lawrence the importation has been: Pine deals, 1,526,000 pieces, against 2,071,000 pieces in 1896; spruce deals, 2,015,000 pieces, against 1,450,000 pieces in 1896. From New Brunswick the import of pine deals has been 32,000 pieces against 9,000 pieces in 1896; spruce deals, 484,000 pieces, against 183,000 pieces in 1896; birch planks, 208,000 pieces, against 152,000 pieces in 1896.

Pine deals have arrived sparingly, and the market is firm for parcels of reliable quality; some shipments have been sold at auction at prices which cannot be taken as an index of the value of prime parcels, the quality in some cases leaving much to be desired. Spruce deals have been freely imported during the month, but a good demand has been shown for Quebec shipments, and prices have not varied. The market for birch plank has been sadly depressed by the constant shipments, and prices have given way, the demand being a limited one. The enquiry for oak, ash, and elm timber has again been small, while birch has been sold at ridiculous prices—the supply being far too heavy.

Prices have ruled as follows: St. Lawrence pine deals, etc., per P. S. H., 1st, bright and dry, regular sizes, £20 10s. to £26 10s.; 1st, bright and dry, oddments, £12 10s. to £19 10s.; 2nd, bright and dry, regular sizes, £15 to £17 10s.; 2nd, bright and dry, oddments, £10 to £13 10s.; 3rd, bright and dry, regular sizes, £10 to £11; 3rd, bright and dry, oddments, £7 10s. to £9; 4th, bright and dry, regular sizes, £7 10s. to £8 10s.; 4th, bright and dry, oddments, £7 to £7 10s. St. Lawrence spruce deals, etc., 1st, regular sizes, £10 10s. to £12; 2nd, regular sizes, £8 10s. to £9; 3rd, regular sizes, £8 to £8 10s.; 4th, regular sizes, £7 to £8; oddments and battens at 20/, 10/, 7/6, and 5/ less respectively; New Brunswick spruce deals, etc., £7 10s. to £8; oddments, battens, and fourths, £7 to £

## SHIPPING MATTERS.

The bark Prince Patrick is loading deals at Herring Cove, N. S., for the United Kingdom.

The iron ship Maren has been fixed to load dry lumber at St. John, N. B., for Buenos Ayres.

The ship Caldera, thirty-five days from Liverpool, arrived at Sydney on Thursday and received orders to proceed to Saginaw River to load a cargo of lumber for Rio Janeiro.

Canal boatmen endeavored to make a $2 rate from Tonawanda to New York, but a middle rate of $1.90 was finally settled upon. The rate from the head of the lakes to Tonawanda is now $1.75.

The Allan Line steamer Lucerne, now at Greenock, has been fixed to load deals at St. John, N. B., for the Clyde at 55s. Norge at Manchester, has also been closed to load for w. c. England at 55s. Mantinea will leave Liverpool early next month, and has been fixed to load deals p t.

The liabilities of J. Lincks & Co., packing box manufacturers, New York, are given as $14,485, and the assets as $4,660.

**WANTED**

500,000 18" good 6 inch c. b. Pine and Cedar Shingles; also Oak Bill Timber cut to order, 12 to 50 feet in length.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Arnprior to Montreal, $1.50 per M ft.; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. To New York for boat delivery, lots 50 M ft. and over, $2.50 per M ft., under 50 M feet $3.25 per M ft. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Boat delivery, lots 50 M ft, and over $3.00 per M ft., under 50 M ft. $3.75 per M ft. Parry Sound, $4.00 per M feet; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively. Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Spragge, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c. From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Cenrtal Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods.

## QUEBEC AND NEW BRUNSWICK NOTES.

[Correspondence of the CANADA LUMBERMAN.]

THE saw mills throughout the maritime provinces have been kept very busy during the season now well advanced, as heavy contracts for deals were made in the spring at a sharp advance over last year's prices for delivery up to and including August. Some of the more knowing mill men saw that the advance in price would so stimulate the shippers as to result in an over-stocked market, and kept their mills running day and night that they might get as much lumber as possible into the shippers' hands before the expected drop in prices would occur. The expected has happened, the price in the British market having declined considerably owing to heavy shipments.

It is really wonderful to observe the lumber-absorbing power of the British markets—about fifty million superficial feet going there during one month this year from the port of St. John, besides large shipments that were made from other maritime province ports, such as Campbellton, Dalhousie, Bathurst, Shediac, Baie Verte, Port Elgin, Pictou, Halifax, Parrsboro, Hopewell Cape, etc.

No doubt the drop in the price of deals in the British market, together with the dull prospects in the United States markets, will have a tendency to lessen the output of logs the coming winter; but it will be something that has never happened in this section if there will not be plenty of logs to supply the demand.

There has been a feeling of uncertainty in the shingle business in New Brunswick all the season; and while the price was low in comparison with other years, the mills were kept running about to their full capacity, with the result that quite a considerable stock was on hand when it became certain that the United States duty would be reimposed. Then there was a rush to get all the shingles across the line before the tariff bill became law. Some of the mills cleaned up their yards very well, and now seeing them practically bare of the best qualities, are sawing away with old-time energy. There are some who would not be surprised—but wonderfully pleased—to see the American markets open out in first-class shape next year. May they not be dissapointed is my wish.

John Fenderson & Co., of Sayabec, P. Q., had the misfortune to lose their mill by fire on the 4th of July. The mill was built by McPherson & Schell, of Alexandria, Ontario, seven years ago, and sold to Messrs. Fenderson & Co. in 1895. They are now rebuilding, putting in a "Lane" circular saw mill, rope feed, seven Connell Bros., Woodstock, N. B., shingle machines, patent haul up, and all the modern appliances for handling lumber at a minimum of cost. The Waterous Engine Works Co. have the contract for the shafting and running gear, which assures a good job. The engines and boilers were not damaged beyond repair, and will be used again to furnish the power. The boiler and engine house is a separate building, built of brick and covered with metal, so that it will be absolutely fire-proof. They expect to have the mill going in October. Mr. Fenderson, who superintends the mill business, is a native of New York State, and is a practical lumberman. The firm have built a number of nice cottages and have added considerably to the village.

The New Richmond Lumber Co. have a fine steam saw mill at New Richmond, P. Q., on the Baie de Chaleur. Mr. W. H. Wardrope, formerly with Grier & Co., of Ottawa, is superintendent. The mill consists of a Waterous steam feed circular mill, patent edger and trimmer, with patent haul up and all appliances for handling logs and lumber economically. They saw deals for the English market. The power consists of two large tubular boilers and a pair of 16 x 20 engines, developing 200 h.p. The company also have plenty of cedar, which they get sawn in Isaac Starrack's mill near by, which has 2 "Dunbar" machines running day and night.

The Cascapedia Lumber Co., at Maria, P.Q., have a fine modern saw mill, steam feed rotary, for slabbing logs, and a "Wickes" oscillating gang, with resaw, patent edger, trimmers, transfers, etc., and saw about twelve hundred logs per day. Mr. Wylie, late of Montreal, is the efficient superintendent and engineer. The company have built a large store and a number of houses for their principal employees. The mill is whitewashed inside and out, and is as "clean as a new pin."

R. N. LeBlanc & Co., of Bonaventure, P. Q., have a circular saw mill and 2 "Dunbar" shingle machines, which are kept going day and night. They have also a store and do a large business. At present they are handicapped in the shipment of shingles, having to ship to Boston or Portland by water. It is to be hoped that the Atlantic and Lake Superior Railroad will be extended from Caplin, its present terminus, to New Carlisle at least, which would be a great benefit to all the Gaspe coast.

T. J. Caldwell, New Carlisle, P. Q., had his saw and shingle mill at Port Daniel burned, but is rebuilding. Mr. Caldwell has a large general store at New Carlisle.

Montgomery Bros., Dalhousie, N. B., have just got a new mill started, consisting of circular and two shingle machines, patent deal edger and trimmer. The power is steam, 70 h.p. The Waterous Engine Works Co., of Brantford, furnished all but the shingle machines, which were made by Connell Bros., of Woodstock, N. B. The mill is nicely situated for getting logs and should do a good business. Mr. George Montgomery is the manager.

Kilgour Shives, Campbellton, N. B., has completely remodelled his mill during the past winter and spring. It consists of live gang circular, nine shingle machines, re-saw and patent slab slasher for cutting slabs and edgings into firewood lengths. The power is furnished by four large tubular boilers, two engines, one 15" x 30" and the other 16" x 24"; there is also an engine to run the dynamo, which furnishes light to the mill, yard, wharves, store and some outside stores convenient to the mill. Mr. Shives does not make lath; anything that will not make paling 3" x 1 x 4 ft. long being cut into fire wood lengths, which sells readily in the town.

Adams, Burns & Co., Bathurst, N. B., have a very fine gang saw mill, with lath machine, shingle machine and re-saw. The mill, built some five years ago by the St. Lawrence Lumber Co., under the superintendence of Mr. P. J. Burns, was most substantially and conveniently constructed, and is one of the best cutting mills in the province. Mr. P. J. Burns, one of the owners, is the efficient superintendent.

F. J. McManus, Bathurst Village, N. B., has put a new circular mill in, and is now sawing deals, etc. The Sumner Co., of Moncton, N. B., purchased the Ferguson gang mill at Bathurst Village last year, gave it a thorough overhauling, put in new power, both engines and boilers, made by E. Leonard & Son, London, Ont., four "Dunbar" shingle machines, box and lath machines, live rolls for lumber, and chains to take refuse and sawdust to burner. The mill is now doing remarkably good work. Mr. Frank Curran is superintendent.

Messrs. D. & J. Ritchie, of Newcastle, N. B., rebuilt their double gang mill on the site of the mill burned last year, and have a very complete establishment in all particulars. Deal boards, lath and palings are the chief manufactures. Mr. Harriman is foreman, and Mr. Robert Ritchie superintendent.

Richards & Hickson, Newcastle, N.B., run one gang and four shingle machines. Mr. Hickson being an ideal mill manager, knows all the requirements towards making the business a success—which it is.

Sargeant Bros., of Nelson, N.B., have a one gang mill running day and night. One thought impresses the visitor to this mill is the neatness and order on every hand.

George Burchill & Sons, Nelson, N. B., have a fine single gang mill. Mr. John P. Burchill is the genial superintendent. He is M. P. P. for Northumberland County, and fills the Speaker's chair with grace and dignity.

T. W. Flett, Nelson, N. B., has a single gang mill, also box factory in which he utilizes all the waste ends and slabs in the making of lobster cases and all kinds of boxes which he can find sale for.

Edward Sinclair, Northwest Bridge, N. B., has a fast-cutting circular mill; also general store, Mr. J. A. Johnston being superintendent.

Lawrence Doyle, Douglastown, N.B., has a single gang mill. This is called the Kerr mill and was built a good many years ago—everything, from the frame of the building, being very heavy. The mill was idle for a long time, but since Mr. Doyle got it he has been doing good work.

E. Hutchinson, Douglastown, N.B., has without doubt one of the neatest and best running single gang mills on the Miramichi river, built some eight or ten years ago, and especially for heavy duty. It was built with the view of adding, when required, another gang or a circular saw rig, but the single gang evidently saws enough to satisfy the owner. John Quinlan is foreman and millwright. He is an authority on mill building and outfitting to reach best results.

Wm. Richards, Chatham, N. B., has a complete two gang mill, running under the superintendence of Mr. M. Morris. This mill was built by the late Hon. William Muirhead, and was intended for especially heavy duty; in consequence every part was made heavy and strong, regardless of expense. Since coming into Mr. Richard's hands it has been thoroughly overhauled, which together with its original staunchness, makes it one of the most reliable mills on the Miramichi river. Mr. J. T. Rundle attends to the office work and shipping. Besides operating this mill, Mr. Richards has interests in several other mills, besides supplying the stock of logs for parties who saw for him. He is one of the largest log operators in the province. His residence, where he has a magnificent farm a short distance away, is at Boiestown, on the Canada Eastern Railway, about midway between Chatham and Fredericton. The situation is very advantageous for carrying forward his winter and spring logging operations on the Miramichi waters.

Senator Snowball, Chatham, N. B., is the "Lumber King" of the north shore of New Brunswick, and is the second largest lumber operator and shipper in the province. Besides, he owns and runs passenger steamers and tug boats, which he builds and equips. He has a very fine machine shop, general store, lobster factories, etc., and still finds a little time to attend to his Senatorial duties at Ottawa. Each department of his large business is under an efficient head, superintended by his son, Mr. W. B. Snowball. He has a three gang mill at Chatham and one gang and fast-cutting circular mill at Tracadie, about 75 miles from Chatham, where he owns very large tracts of the best spruce and pine timber limits in the province. The lumber notes regarding Chatham would not be complete without a remark or two touching the wood pulp industry, which is coming to the front wherever spruce wood can be found. There are two very fine pulp mills here; one, the Maritime Sulphite Fibre Co., situated at the lower end of the town, and the other, the Dominion Pulp Co., just across the Miramichi river, the former having a capacity of thirty tons and the latter of fifteen tons per day at present, but that of the latter is now being doubled, provision for this having been made when the building was erected. The quantity of spruce wood required to keep these two mills in operation is enormous. At present the small spruce trees are used for pulp, but it would seem that the growth would not be sufficient to meet the heavy demands being made, and consequently the larger trees will have to be used.

At Black Brook, George I. Vanghan runs a two gang mill, he having purchased the mill and limits two years ago. They were formerly owned and operated by the firm of Guy, Stewart & Co., and later by Guy, Bevan & Co., but had been idle some seven or eight years before Mr. Vaughan purchased the property. Mr. Vaughan is a veteran lumberman, having operated a couple of properties in Albert County successfully. Besides running the Black Brook mill he supplies logs to another mill in the vicinity and handles the products. His output this year will be in the neighborhood of ten million feet of deals.

W. J. P.

## CONUNDRUMS FOR THE GOVERNMENT.

A WRITER in the Toronto World asks the following questions:

1. Why allow American citizens to own Canadian tugs under an assumed Canadian name and do the work which our Canadian tugs should do?

2. Why allow American tug boats the privilege of bonding coal, while our Canadian boats have to pay duty?

3. Why allow American citizens to run Canadian tugs?

4. Why allow Canadian logs to be towed over to Michigan, duty free, to supply the Michigan mills with saw logs while the Georgian Bay mills have to be closed?

5. Why allow American lumber to go in free while ours is taxed $2 per M?

6. Why not have the export duty on logs the same amount as the Americans tax our lumber?

7. Why not have our timber, the natural resources of the country, all manufactured in Canada?

# THE NEWS.

—F. W. Beckman, lumber merchant, Ellershouse, N. S., is dead.

—Brown & Powell, of Wingham, have purchased a saw mill at Fordwich, Ont.

—The death is reported of Charles B. McGill, lumber merchant, Middle Clyde River, N.S.

—Mr. John Zimmerman, of Tavistock, Ont., is adding a new dry kiln to his extensive stave factory.

—The Holland and Emery Lumber Co. have one of their mills at Byng Inlet, Ont., nearly finished.

—Wm. Massie, jr., has purchased the lumber and building business of the late W. McRossie at Kingston, Ont.

—Messrs. Pickard & Rowan, saw mill proprietors, of Owen Sound, Ont., have made several improvements in their mill.

—Mr. Harvie is fitting up his saw mill at Berriedale, Ont. He has added another boiler, engine, band saw and other modern improvements.

—The mills at Calumet, Que., destroyed by fire last fall, have been rebuilt. The machinery was supplied by McOuat & McRae, of Lachute, Que.

—As a result of tariff changes, the Rathbun Company, of Deseronto, are said to have closed down some of their mills and reduced work in other departments.

—The incorporation is announced of the King Lumber Company, of Chipman, N. B., to operate saw mills and conduct a general lumbering business. The capital stock is $25,000.

—A scientific forester in Europe says that the oldest trees are the pines of Norway and Sweden, and that these are not known to live more than 575 years. Germany's oldest oaks live little more than 300 years.

—At Santa Rosa, Cal., there is said to be a Baptist church built entirely from a single redwood tree. Timbers, weatherboarding, lining, etc., are all of wood, and after it was built there were 60,000 shingles left.

—In connection with the announcement that the Dickson Company, of Peterboro', would operate their limits in Cavendish and Anstruther this fall, it is stated that the mill at Lakefield will be remodelled.

—We observe the incorporation of the Laing-Ritchie Company, of Essex, Ont., with a capital stock of $40,000, and having for its object the manufacture of agricultural implements, lumber, sash and doors, building materials, etc.

—The South River Lumber Company have finished cutting their logs for the season and closed down their mill at South River. It is rumored that the company contemplate fitting up a water power mill at the Falls to cut shingles.

—The Rat Portage Lumber Company, of Rat Portage, Ont., are meeting with success in the manufacture of sash and doors, and have recently built a large addition to their factory, in which new machines of improved type have been placed.

—J. Langelier has taken an action for $5,200 against A. Charlebois and J. M. Fortier, of Montreal. The claim arises out of certain transactions with the Maria Wood Pulp Company, of Maria, Que., concerning the sale of timber limits.

—Dr. C. Keller, of Zurich, asserts that spiders are doing most important work in preserving the forests by protecting trees against devastation on the part of insects. According to his idea, spiders are more beneficial to the maintenance of forests than all the insect eating birds put together.

—The Lumber Trades Journal gives statistics showing the consumption of southern lumber by the different countries. The United Kingdom is the largest customer, taking 446,191,641 superficial feet annually. This is again divided as follows: England, 311,332,505 feet, Scotland, 86,010,656 feet; Ireland, 48,848,479 feet. Canada takes about 500,000 feet.

—The Hon. S. N. Parent, Commissioner of Crown Lands for Quebec, has decided to explore the forests on the north shore of the St. Lawrence river, as several parties wish to purchase limits in Moisie, St. Augustine, Natashquan, Magpie and other districts. These parties, we understand, intend to open lumber camps and go into the pulp wood industry.

—The Cowichan Lumber Company, Limited, is seeking a Dominion charter, to deal in and manufacture lumber, pulp, paper, etc., in British Columbia and elsewhere. The chief place of business will be Bobcaygeon, Ont., and the applicants are: M. M. Boyd and W. T. C. Boyd, of Bobcaygeon, G. Boyd and H. J. Wickham, of Toronto, J. D. Flavelle and J. G. Edwards, of Lindsay.

—Prof. A. E. Shuttleworth, of the Ontario Agricultural College, Guelph, is pursuing a course of study at Goettingen. He will pay some attention to forestry. Writing to the Department he says: "I am greatly delighted with the German forests. The method of planting, preserving and culling is securing for this country an almost inexhaustible wealth of all varieties of wood and timber."

—The Winnipeg Commercial states that on one of the passes into the Klondyke, away in northern British Columbia, a saw mill has been established to cut lumber for the boats of adventurers. The man who wants the boat has to go into the woods and cut his own logs, then Rudolph & Co., the proprietors of the lone Lake Bennett saw mill, will cut the logs into boards for him if he so desires, charging for this service $70 per thousand feet. If they supply the logs themselves they charge $100 per thousand feet, and if the traveller wants them to build the boat also they charge from $75 to $150 more, according to the size. This mill has a capacity of about 9,000 feet a day, so that if employed full time the proprietors would take in nearly a thousand dollars a day. There is also a saw mill nearly completed near Dyea.

## DEATH OF MR. HUGH McLEAN.

JUST as we go to press we learn with deep regret of the sudden death of Mr. Hugh McLean, of Salmon River, N. B., a description of whose saw mill and lumbering business appears elsewhere in this number. About six years ago Mr. McLean had a paralytic stroke, but apparently recovered from its effects. A secondstroke, however, came upon him last week, and he never recovered consciousness. He was 57 years of age.

## LEGAL.

HURDMAN VS. HULL LUMBER COMPANY.—The important suit of Messrs. Hurdman vs. Hull Lumber Company was brought to a close on Saturday, the 18th ultimo. The action involved some 800 square miles of timber limits in the province of Quebec and 100 miles in Ontario, the total value of which would probably reach $750,000. The facts of the case appear to be that in 1891 the Hurdmans sold to the Hull Lumber Company a four-fifths interest in the existing lumber business, the defendants to have the whole property in their name until all of the indebtedness which was assumed was paid off, and if they succeeded in paying off the indebtedness and there was anything left, then the plaintiffs were to be given a one-fifth interest. The plaintiffs' contention was that they did not sell defendants an interest, but that the latter merely advanced to plaintiffs the money as a mortgage to pay off their indebtedness, and were working it out. They claimed that, the indebtedness having now been paid off, they should be handed back the property. On this point Judge Rose gave his decision in favor of the Hull Lumber Company, who retain a four-fifths interest. There were also in connection with the case several minor matters, such as salaries for working members of the firm, interest on money that defendants advanced, and one or two other points of dispute, upon which the judge has not reached a decision. On Saturday morning four witnesses were examined, Messrs. F. W. Avery and W. G. Whyte, of the Hull Lumber Company, and Robert Hurdman and W. R. Hurdman. Mr. Dalton McCarthy represented the plaintiffs, and Mr. G. F. Shepley the defendants.

A dispatch from Stirling, N. J., states that Herbert G. Torrey, J. G. Torrey and two others have been arrested on the charge of breaking into the factory of the Magnolia Metal Company on the morning of August 6th last, maliciously destroying property and carrying away tools and other property belonging to the company. The Messrs. Torrey were formerly employed by the Magnolia Metal Company as superintendent and foreman, but this company request us to give notice to the public that none of these parties above mentioned have now any connection whatever with their business, their relations having been severed on April 15th last.

## PERSONAL.

The death is announced at Oakville, Ont., of Mr. John A. Doty, lumber merchant, of Bagden, in his 31st year.

Mr. Joseph Williams, a retired lumber merchant and vessel owner of Goderich, Ont., died suddenly last month, at the age of 69 years.

Mr. Robert Thomson, senior member of the firm of R. Thomson & Company, lumber merchants, Hamilton, Ont., is at present in England with a view of extending the foreign connection of his firm. He sailed from New York by the steamer "Britannic."

Mr. J. B. Miller, president of the Parry Sound Lumber Company, has joined the rank of the benedicts. In Toronto, on Wednesday, September 22nd, he was married to Miss Jessie Thomson, daughter of the late John Thomson, of Longford Mills, Ont. Mr. and Mrs. Miller have taken an eastern tour.

At Peterboro, Ont., recently, Mr. John Duignan, assistant superintendent of The Dickson Company and a gentleman well known in lumber circles, was married to Miss Morgan. The employees of The Dickson Company presented the bride with a pair of beautiful chairs, accompanied by an address. THE LUMBERMAN extends congratulations and good wishes.

## THE BALL NOZZLE.

VISITORS to the Toronto Exhibition were interested in the exhibit made by the Ball Nozzle Company, of Toronto, Limited, who are the sole owners of the ball nozzle for the Dominion of Canada. This nozzle is particularly adapted to the requirements of saw mills and wood-working factories, as the spray covers a very large space, thus quenching a fire in the quickest possible manner. It permits of the flow of the same quantity of water from the hose as a straight nozzle without producing back pressure on the hose, and a single man with one hand can manage it. A person is enabled to enter buildings in the face of flame and smoke, and go with impunity to any part of a burning structure, fighting the fire at close range. For wetting adjoining property it is claimed to accomplish as much as half a dozen straight streams. The company have met with much success in placing the nozzle upon the market, and where tests have been made the results are said to have given the utmost satisfaction.

## ATTACTIVE EXHIBIT OF SHINGLE MACHINERY.

ONE of the most attractive exhibits at the Toronto Exhibition was made by the Canadian Locomotive and Engine Company, of Kingston, Ont. It was at the east end of Machinery Hall, and consisted of a shingle mill in operation. The mill included one of the well-known and favorite "Dauntless" shingle machines, one XXX shingle jointer, two XXX packing boxes, and one XXX saw filer or sharpener. The outfit was driven by a portable engine, and was in charge of Mr. F. Drake, who had brought with him a full gang of practical shingle makers, and also a liberal stock of shingle timber, which was all manufactured into shingles on the ground, and the product sold to Mr. F. Hillock at a substantial advance on current prices.

When we assert that in one hour and twenty minutes this machine turned out 9¼ M shingles, our readers will readily understand that it must have been a first-class machine, in very active operation, and handled by men who thoroughly understood their business. No wonder the people liked to see it working; the sight was novel and very interesting.

The Locomotive & Engine Company is composed of thoroughly reliable and energetic business men, and this, their first exhibit, would certainly lead to the conclusion that they do not intend to leave any part of their extensive business half done. A few years ago they secured the services of Mr. Drake, with his entire stock of mill machinery, patterns, patents, etc., and since then they have been constantly adding to this already large stock. Their patterns are new and of modern design. They are therefore prepared to quote very close prices for any style of saw mill machinery, either band, gang or circular, or any piece of machinery pertaining thereto.

This company has one of the largest and best equipped machine shops in Canada, with heavy and very fine machinery specially designed for locomotive and fine engine work, and are in a splendid position to undertake the manufacture of other lines of high class machines.

## MICHIGAN LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

MICHIGAN lumbermen do not regard the new regulations adopted by the Ontario government as likely to seriously affect their interests. In fact, most of them feel somewhat jubilant, as they consider it an indication that nothing further will be done to prohibit the export of saw logs from the province. Mr. Loveland, of the Saginaw Lumber and Salt Company, is quoted as looking on the dark side of the situation, and thinks the new law a death blow to the lumber interests of the Saginaw Valley. He was strongly in favor of the $1 import duty on lumber.

There has been some talk of late that lumber prices were advancing, but a careful enquiry proves that this is not generally the case. The fact is that yellow pine will regulate the price of white pine, and it is not likely that white pine dealers will be able to get a very substantial advance. Recent purchases of white pine stock have been made at same price as paid for similar stock last March. If it had advanced, the parties selling the stock would have wanted it. For the balance of the year wholesalers do not expect much of an advance over the past year's figures.

Saginaw dealers have commenced a war against the railway companies. The rate on lumber from this valley to New York is 21 cents, while Chicago is given a cut rate of 20 cents, which has enabled dealers there to ship lumber east at a lower rate than is levied here, although the distance is much greater. Efforts are being made to have the matter rectified.

William Peters' saw mill commenced operations last month, a supply of logs having arrived from Bay City.

In August, 1896, the wages of all the employees of the R. G. Peters Salt and Lumber Company at Manistee, Mich., were reduced ten per cent. The company last week raised the wages to the former standard.

The Saginaw Lumber and Salt Company will take out very little stock in Canada this season. The company have leased the Linton Manufacturing Company's planing mill, in which much of their stock will be worked up.

Mr. W. S. Eddy returned early in the month from a trip through Ontario. He announces with firmness that there will be no export duty on saw logs, and characterizes as disgraceful the action of certain Michigan lumbermen in waiting upon the Ontario government.

SAGINAW, Mich., September 21, 1897.

## OTTAWA LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

THE lumbermen in this district do not all agree with the views of Mr. Edwards, as expressed at the meeting in Toronto last month. There appears to be a growing feeling in favor of restricting the manufacture of saw-logs to the province, this view being expressed by two or three of the lumbermen with whom I chatted. Some of them are rather reticent, and will not publicly express their views on the question, but from what can be learned opinions are nearly equally divided, with the balance, perhaps, in favor of the government deferring action for the present. The new timber regulations adopted by the Ontario cabinet, compelling the employment of Canadian workmen only, are not regarded as significant, owing to the difficulty likely to be met with in enforcing the same and in preventing the purchase of machinery and other supplies by proxy.

The destruction by fire of the saw mill of the Hull Lumber Company has caused serious inconvenience, besides throwing 150 workmen out of employment. The fire might have been far more serious had the wind not been blowing directly across from Eddy's pulp and paper mill and across the falls, preventing it from spreading. The present company had only recently taken possession of the property, and had made extensive improvements, it being estimated that $75,000 had been spent thereon within eighteen months. The loss is placed at $100,000, three-fourths of which is covered by insurance. It was intended to continue sawing until the end of October, but the remaining mill will now be operated day and night. The company is composed of A. A. Buell, W. G. White, F. W. Avery and C. E. Read. No decision as to rebuilding has yet been reached.

A newspaper representative recently interviewed a number of the lumbermen regarding the extent of their operations in the woods this winter. The result I give you in brief: The Bronson & Weston Company will send about half as many men to the woods as usual. J. R. Booth is reducing his operations by one-quarter. The Hull Lumber Company are sending about 60 per cent. of the men to the woods as last winter. The Hawkesbury Lumber Company and W. C. Edwards & Co. will each take out fewer logs. The McLaren Estate and the Ottawa Lumber Co. will do about sixty per cent. of last winter's work; the St. Anthony Lumber Co. about sixty per cent., and Gilles Bros. about forty per cent. Sheppard & Morse, the Canadian Lumber Company, and the Pembroke Lumber Company have sent no men into the woods as yet.

Antoine Charest has issued in the High Court of Justice a writ for $4,000 commission on a sale of timber at Lonely Lake for E. D. Moore and C. A. Moore, of Ottawa.

The Ottawa, Arnprior & Parry Sound railway was recently served with an injunction restraining them from carrying 27,000 railway ties into the United States, pending the settlement of a dispute regarding ownership between Hebrom Harris and the Rideau Lumber Company.

A rumor was started throughout the city that the Bronson & Weston Lumber Company intended to retire from business. An investigation proved that there was no foundation for the report. The company have a quantity of logs on hand and will not operate in the woods this winter as heavily as formerly, but in other respects the business will continue as heretofore.

OTTAWA, September 22nd, 1897.

## THE LUMBERMEN'S MEETING.

To the Editor of the CANADA LUMBERMAN.

DEAR SIR,—This was a most timely event. The passing of the resolution so unanimously, mild though it was, gives the utmost satisfaction to lumbermen generally in this locality who were not present at the meeting. To any unprejudiced mind, it must be quite apparent that our American friends had the big end of the bargain under existing circumstances, but they were not satisfied. As Mr. Lovering very truthfully remarked, it was not a duty against our lumber, but against our labor. They got all the free lumber they required from us when they got our logs; hence they did not require lumber from our mills.

Those who, at the meeting, voted with Mr. Charlton, are no doubt interested, as he is, in selling the raw product of our forests to the highest bidder in the United States markets, hence their opposition to any movement in the direction of protection to our natural forest wealth. Many lumbermen would rejoice to see the government go a step further and place an export duty on pulp-wood. Our forests of spruce are fast disappearing to supply American demands, and all we are getting in return is very little over the actual outlay in wages for producing and loading.

I am sorry that organization was not accomplished at the meeting. Lumbermen have a number of grievances that might be rectified or mitigated through organization. For instance, we have no rules of inspection for either pine or hardwood. There is no uniformity in prices for the production of our mills—every man has a price of his own. The railway companies charge one cent per 100 lbs. more on hardwoods than on pine, and if you enquire from the railway men why this is, they cannot give you a reason for it. This grievance alone in my opinion is sufficient to bring the hardwood men together and unanimously ask that justice be done in this direction. It is a most unjust discrimination against such hardwoods as is produced in the greater part of Ontario, and the sooner it is amended the more credit it will be to the intelligence of the ratemakers of the railway companies; for every lumberman, whether he be in the hardwood or pine trade, knows that there is less profit in hardwood lumber than in any other.

I would be pleased to see another meeting called for the purpose of organization and drafting inspection rules for both hardwood and pine, and to devise means for the protection of the trade in general.

Yours truly,
J. E. MURPHY.

HEPWORTH, 23rd August, 1897.

This journal circulates in foreign lumber markets. Persons desirous of cultivating the same should place their advertising cards therein.

# NOTICE
TO
# LUMBERMEN

A meeting of Ontario Lumbermen will be held in the BOARD OF TRADE ROOMS, TORONTO, on

## WEDNESDAY, OCT. 6, 1897,
AT 1.30 P. M.

(chair to be taken by Col. Davidson), to receive the report of Messrs. Scott, Bertram, Rathbun and Waldie, the Committee appointed by the lumbermen at their meeting held in Toronto on Aug. 19th, to present to the Ontario government the resolution passed at that meeting, and take such further action as may be deemed advisable in behalf of the lumber industry of this province.

A cordial invitation is extended to all lumbermen to attend.

Provided the attendance shall reach fifty, reduced fares will be granted by the G. T. and C. P. railways Delegates will purchase a single ticket to Toronto, and get from their local railway agent a receipt on a standard form for price of same. This receipt, when signed by the Secretary at the meeting, will entitle the holder to a return ticket at one-third fare.

EDGAR A. WILLS,
Secretary.

# The A. R. Williams Machinery Co., Limited

**Front Street West - TORONTO**

WITH BRANCHES AT

345 St. James St., MONTREAL; 193 Colborne St., BRANTFORD, and the London Machine Tool Co., LONDON

Beg to call attention to their new descriptive stock taking list, just issued, which they will be pleased to send on application.

We have **Several Valuable Mill Sites** in good localities for sale on reasonable terms, consisting of a Planing Mill in a northern town, with large new building and full equipment of modern machinery, used only a few months from new;

**One Saw and Shingle Mill Outfit**—good order as last used;

**One Saw and Stave Mill,** having one 5 block Waterous iron frame Saw Mill, Engine, Boilers, and full complement of Heading and Stave Machinery, now cutting out this season's stock;

We are the Sole Canadian Agents of the celebrated **Sturtevant Improved System of Dry Kiln and Heating Apparatus,** and have on hand now for prompt delivery, one of their 120" Fans with engine attached, end 6,140' cap. Heater. This rig cost when new $2,000.00, has only been run a short time, and will be sold at a bargain,

**THE A. R. WILLIAMS MACHINERY CO., LIMITED, TORONTO**

# WOOD PULP DEPARTMENT

## UNITED STATES PULP MACHINERY IN CANADA.

THE Pusey and Jones Co., of Wilmington, Del., have recently received an order from the Laurentide Pulp Co., Ltd., of Grand Mere, Quebec, for three machines. One machine will have eight cylinders, each cylinder being 36-in. in diameter, with a 120-in. face. The vats will be of cast iron and the couch rolls rubber-covered. There will be six pairs of squeeze rolls, two pairs of main press rolls being 24-in. in diameter, with 117-in. face. The dryers will be fifty in number, each 48-in. in diameter, with 114-in. face; also two stacks of chilled iron calender rolls, five and seven rolls respectively, with 112-in. face.

The second machine will be a 90-in. Fourdrinier suitable for wire 65-ft. long, 88-in. wide press rolls, with 90 and 89-in. face. It will have twenty-eight dryers, 48-in. in diameter, with an 88-in. face, and eleven high-stack cylinders, with 88-in. face.

The third machine is to be a 112-in. Fourdrinier, suitable for wire, 65-ft. long by 110-in. wide, press rolls 111 and 112-in. face; dryers, twenty-eight, with diameters of 48-in., and 120-in face; eleven high-stack calender rolls, 108-in. face.

The suctions and stuff pumps are entirely of new designs. The suction pumps are 16x12-in., and the stuff pumps are of the triplex order, 8 x 10-in.

The Pusey and Jones Co. have nearly completed for the Canada Paper Co., Ltd., Windsor Mills, Quebec, a 118-in. Fourdrinier machine, suitable for wire, 65-ft. long by 116-in. wide, having twenty-eight dryers, 48-in. in diameter, with a face 114-in.; two dryers, 36-in. in diameter and 114-in. face; four dryers, 24-in. in diameter, with 114-in. face; ten roll-stack calender, 114-in. face, with a patent doctor and calender feed. The machine will be driven by a cone drive, and will be capable of making newspaper and other fine grades of paper.

## THE BRITISH WOOD PULP MARKET.

WOOD PULP, of London, Eng., of 8th September, says of the British wood pulp market:

Scandinavian manufacturers of mechanical pulps are still holding out for high prices, and as a consequence, Canadian pulp is now being freely sold. There are several large Canadian concerns pushing their products in this market, and we learn on reliable authority that over 50,000 tons of Canadian mechanical pulp have been sold for next year. This is not to be wondered at when we consider that it is being offered at 3s. per moist ton below Scandinavian prices. The difference in value, however, is greater than would appear from the above, as papermakers consider it worth 3s. to 5s. per ton dry more than the Scandinavian, in that more of it can be used in the paper. This is a hard nut for Scandinavian makers to crack, but they have themselves to blame for it.

The sulphite market is quiet, but prices remain firm, and are likely to advance if anything, as with the improved state of the paper trade in the United States, there is not likely to be much chemical pulp available for this country from that quarter; and when Scandinavian makers realize this, there is no doubt that they will get firmer in their demands. We understand there are plenty of enquiries for pulp, but papermakers simply will not pay the prices asked.

Most of the available soda pulp is now in two or three hands, and prices are not likely to recede, although they cannot be pushed too far without bringing esparto into competition. Some papermakers have already, we understand, decided to use more esparto in future, rather than pay prices now asked. In any case this must be so to some extent, as the supply of pulp is not large enough to meet even present demands.

The following are the net current prices, c. i. f.:

| | | £ s. d. | £ s. d. |
|---|---|---|---|
| Sulphate and Soda, bleached,..... | per ton, | 10 10 0 to | 12 10 0 |
| " unbleached, first | " | 5 0 " | 8 15 0 |
| " unbleached, second | " | 7 15 0 " | 8 0 0 |
| Sulphite, bleached,..... | " | 11 10 0 " | 14 10 0 |
| " unbleached, first .. | " | 9 0 0 " | 11 10 0 |
| " unbleached, second | " | 8 10 0 " | 9 0 0 |
| Pine, dry, in sheets ..... | " | 4 8 9 " | 5 2 6 |
| " 50 per cent. air dry.. | " | 2 5 0 " | 2 10 0 |
| " extra fine..... | " | 2 10 0 " | 2 15 0 |
| Brown, dry ..... | " | 4 5 0 " | 4 15 0 |
| " 50 per cent. air dry | " | 2 10 0 " | 2 15 0 |
| Aspen, dry ..... | " | 7 0 0 " | 7 15 0 |

## PULP NOTES.

Bear River, N. S., is said to possess desirable sites for pulp mills.

A number of Canadian firms have recently put in new paper machines.

It is estimated that over 30,000 tons of pulp have been exported from Canada to Europe this year.

A proposition made by A. Cushing & Co., of St. John, N. B., to construct a pulp mill to cost $150,000, is now under consideration by the council of that city.

The sulphite mills of the Dominion Pulp Company, formerly owned by the Masterman Sulphite Pulp Company, near Chatham, N. B., are turning out fifteen tons per day.

The new mill of the Chicoutimi Pulp Company, Chicoutimi, Que., is nearing completion. Much of the machinery is being supplied by the Adirondack Machine Company, of Carthage, N. Y.

The Ontario government has been offered $1 per cord for all the pulp-wood stumpage yet uncut in the province. This offer is made by Mr. P. J. Loughrin, representing a syndicate. The government is considering the matter.

Mr. A. G. Jones, president of the Acadia Pulp and Paper Company, whose mills are at Morgans Falls, on the La Have River, and at Milton on the Liverpool river, in Nova Scotia, writes that they are putting in new machinery at these mills, and next year expect to turn out about 14,000 tons of dry pulp.

The Paper Trade Review, of London, Eng., says: "Wood pulp has been in good demand during the present year. The arrivals last month, however, show a decline compared with July, 1896, of 6,869 tons, and in value, £26,047. In February there was a decrease of 697 tons, but during the other months there was a substantial increase; for instance, in January the comparative advance in receipts was 16,865 tons; March, 6,280 tons; April, 1,413 tons; May, 5,014 tons; and June, 10,208 tons. The total imports for the seven months amount to 214,345 tons, against 182,131 tons for the corresponding period of last year."

MANUFACTURERS

**Of Pulp Machinery** should place their announcements on this page. The pulp industry is a growing one, and a number of new mills are likely to be erected in the near future. Write for card of advertising rates.

## PULLEYS.

One of the greatest objections to the fast running of shafting and belts is the want of pulleys properly constructed. Experience has led some of the best engineers to the conclusion that it is not safe to run an iron pulley four feet in diameter 400 turns per minute, owing to the unequal shrinkage of castings in cooling, and other imperfections. In one of the discussions before the New England Cotton Manufacturer's Association, it was stated by a well known engineer that, running slow, the centrifugal force has but little effect; but as the centrifugal force is as the square of the velocity, it is not so easily overcome in rapid motions. If the rim of the pulley is much thicker, the centrifugal force increases with the thickness, and consequently nothing is gained by the extra iron. The centrifugal force of material is as the specific gravity, and as the specific gravity of cast iron is thirteen times that of pine, hence, the centrifugal force must be thirteen times greater; but the tensile strength of cast iron is only two to one of that of pine, therefore, the rim of a pulley made of white pine felloes will sustain from four to six times the centrifugal force of a rim made of cast iron. That is, the same diameter of white pine felloes will run more than double the velocity without being torn asunder. It is less likely to be broken by jar or blow, and less than one-half the weight, and of course takes less power to run. A pulley made in this way has been run, sixteen feet diameter, four feet wide, ninety turns per minute, for eighteen months. With quick shafting, wood must take the place of iron pulleys.—Textile World.

WHY BAND SAWS BREAK

SIXTEEN REASONS,

AND HOW TO AVOID THEM

Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking; analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner of properly setting irregular teeth is described. In connection with the treatise is a history of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, ONE DOLLAR.

## NEW PULP MILL.

THE Chicoutimi Pulp Company's mill at Chicoutimi, Que., is nearing completion. The mill will be run by water power, the turbines being furnished by the Jenckes Machine Company, of Sherbrooke, Que. The water is being carried from the top of the fall down to the power house through a steel pipe over 250 feet long and no less than 11½ feet in diameter, at the end of which are three of their celebrated Crocker turbine water wheels, one of 1,200 h.p., one of 690 h.p., and one of 450 h.p., making a total of 2,340 h.p. This does not, however, give a just idea of the magnitude of the work, which may be more readily understood when we add that were this huge pipe laid out flat it would cover a space of over 9,200 square feet; it contains over 14,999 rivets, and the whole water power equipment has an aggregate weight of more than 152,999 pounds.

It is interesting to notice that one of these water-wheels is connected directly (without the use of belts) to an electric dynamo running 500 revolutions per minute.

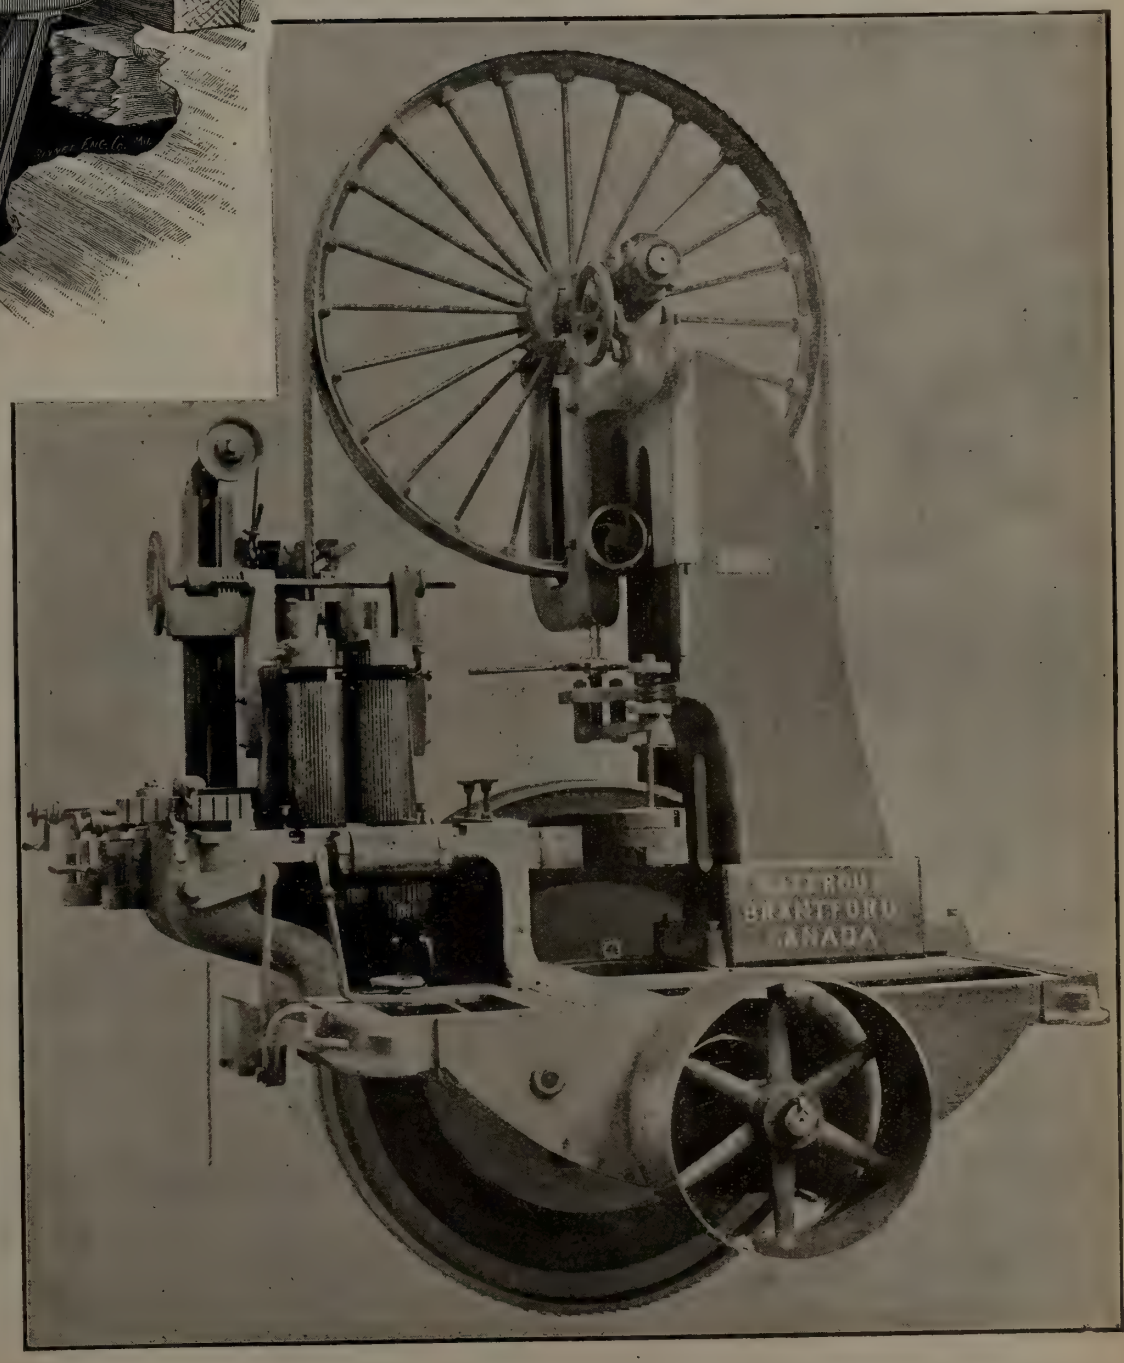
# Lumber-Making Machinery—The Most Modern

1844 1898

Built in modern, well-equipped works from plans—the result of long experience—by Skilled Mechanics, and an honorable record for over fifty years for Square Dealing, is your inducement to correspond with us when erecting new mills, contemplating a change or increasing your plant.



## Canada's Timber, like that of our neighbors, is fast disappearing.

## ECONOMY is the Watchword.

### SAVE WHERE YOU CAN

Why then hesitate to replace your wasteful six or eight gauge Circular, with its quarter or larger saw kerf, with an

## "ALLIS BAND"

and its scant Eighth Kerf.

It gives you Nine Boards where you now get eight. There is no secret about a band mill; it is as easy to run as a circular, and will cost you no more per day, if you send your circular saw filer to us this winter to learn how to handle band saws. There is a further saving in wide and smoother lumber, figured by some on the whole as a saving of 15 per cent. and over. Figure what this would have been on this year's cut. Would it not have paid for the change and left a handsome margin?

Write us at once. You can make money by ordering early.

# Lumbermen Again in Session

## ANOTHER IMPORTANT MEETING OF ONTARIO LUMBERMEN.—THE COMMITTEE SUBMITS THE REPLY RECEIVED FROM THE ONTARIO GOVERNMENT.—RESOLUTIONS ADOPTED IN FAVOR OF IMPORT AND EXPORT DUTIES.—MR. CHARLTON AGAIN OPPOSES RETALIATION.—CONSIDERATION FOR THE HARDWOOD TRADE.

At a meeting of lumbermen held in Toronto in August last, a committee was appointed to present to the Ontario government the resolution passed at that meeting. For the purpose of hearing the report of this committee, and also to consider what further steps should be taken in the interest of the lumber trade, invitations were issued for a meeting of lumbermen to be held in the Board of Trade Building, Toronto, on October 6th. The attendance was not as large as on the previous occasion, when the sale of government timber limits had brought to the city a large number of lumbermen from outside points. Notwithstanding, there were present nearly one hundred persons interested in the lumber industry, and the meeting proved to be of great importance, resulting in lively discussions on the different aspects of the trade. The chief opposition to the tenor of the meeting was found in Mr. John Charlton, of Lynedoch, and Mr. Levi Crannell, of the Bronsons & Weston Co., of Ottawa.

When the meeting was called to order there were present, among others, the following persons :

Levi Crannell, Bronsons & Weston Co., - Ottawa.
J. Fleck, J. R. Booth, - - - "
H. K. Egan, Hawkesbury Lumber Co., Hawkesbury.
Jas. Scott, Georgian Bay Lumber Co., - Toronto.

Geo. W. Stevens, - - - - Buffalo.
Wm. Irwin, - - - - - Peterboro.

The chair was again taken by Lieut.-Col. Davidson, and Mr. A. A. Scott was appointed secretary.

The chairman then read the notice calling the meeting, and said : Gentlemen,—You have all, perhaps, followed more closely than I have the action that has been taken with regard to the lumber business since we last met. I have no doubt it has been disappointing to a number of you, but from what I have been reading in the party newspapers, I think it only a forerunner of what is likely to follow. This meeting will be better able to express its views after it has heard the report of the committee appointed to wait on the government. After this report has been received, should there be any other business, I would like to limit the speeches to fifteen minutes; I think that is necessary in order to get through the business in a reasonable time. I think everybody can say all they wish within that time. The first business, then, is the report of the gentlemen who waited upon the government.

Alderman Scott presented the report, which was as follows :

Your committee beg to report that, by appointment, they waited on the government of the province of Ontario, all the ministers being present but one, and presented the resolution. After a very extended discussion of different phases of the subject of the resolution, your committee were informed that the request would be very carefully considered. Your committee were also informed that the Lumbermen's Association had requested the government to defer their decision until that association had an opportunity of being heard in opposition to the request contained in the resolution. As that association has not held a meeting of its members for many years and is practically defunct, your committee regard the request as wholly unauthorized and an unwarranted assumption of authority. Yesterday your committee received the report of the government, which reads as follows :

"The government has had under consideration the resolution passed at the meeting of lumbermen held on 19th of August, and has had the benefit, furthermore, of the discussion which has taken place in the public press, as well as the letters which have been addressed to the Department from time to time upon the subject. A deputation of American owners of limits also waited upon the government some time ago, and urged their views.

"I understood that a meeting was to be called of the Lumbermen's Association of the province of Ontario, and was asked by a representative of that association that action should be deferred until their meeting took place. Subsequently it was intimated, for reasons that I am not aware of, that the meeting would not be held.

"It has already been announced that the government entertains the opinion that during the currency of the existing licenses such action as was proposed by the resolution of the meeting of 19th August could not well be taken. I may say, however, that the government is very carefully considering what policy should be adopted with reference to logs cut after the expiration of the existing licenses, and it is hoped that in a short time the public will be made aware of the course which may be determined upon."

(Signed) J. M. GIBSON.

From this it appears that the government has decided not to grant the request so far as existing licenses are concerned, and that the matter so far as timber cut under future issues of licenses is concerned, is still under consideration. All of which is respectfully submitted.

(Signed) JAMES SCOTT. JOHN WALDIE. JOHN BERTRAM. E. W. RATHBUN.

Ald. Scott : Mr. Chairman, it is my duty to move the reception of this report. I did feel in the earlier part of the day that I would make some comments in connection with the matter. Upon further consideration, however, I have decided to defer anything I may have to say on the subject until a little later on. I desire only to express my regret—and I think I can speak for a large number of those who are present this afternoon—that the government has not seen fit to act promptly with regard to timber cut under licenses current at the present time. I am aware that there is some difference of opinion upon that subject, but if I interpreted the meaning of the resolution, and the temper of the meeting at which the resolution was passed, I think I am justified in saying that the lumbermen of the province of Ontario, by a very large majority, felt that the government ought to have acted even with regard to the present licenses. (A voice : "That is right"). That they have not done so, as I said before, I regret exceedingly. The position that Ontario lumbermen find themselves in to-day is simply this, that there is a penalty and fine on them of two dollars per thousand feet for doing business in Canada. That condition of affairs arises through no action of theirs; it arises entirely through the action of men whose representations to the government have been accepted as a policy to be pursued in regard to this matter on behalf of the province. It does seem to me to be an anomalous position for lumbermen to occupy, that the men who brought about this condition of affairs by their representations and their actions at Washington should have their action confirmed in the province of Ontario. These men should hardly have any standing in the province of Ontario on this question, because it is

through their action, through their direct action, their special efforts at Washington, that this condition of affairs was brought about. Therefore, I say that I feel somewhat humiliated, as a lumberman, that their view of the question, so far as the present licenses are concerned, has prevailed with the government of the province of Ontario. I wish to say one word with regard to the Lumbermen's Association of the province of Ontario. (Mr. Beck: "We haven't got any.") I quite agree with Mr. Beck that we have not got any. That association, as you know, has not met for several years, some of you being members of it; it has not been called together for years, and until this crisis arose it would not have been possible, on any other question, to have got a dozen—I venture to say, half a dozen—members of that association present, and for any officer of it to presume to speak on behalf of the association to the government of the province, asking that the government should defer action

MR. C. E. C. NEWTON,
(Chas. Newton & Son, Victoria Harbor.)

until that association had been heard in opposition to the resolution of the meeting of the 19th of August, is, to characterize it very mildly, an outrageous assumption of power. I do not know who he is—I did hear a name, but I don't know whether it is correct or not—but I say he had no right to speak for me in that matter, and there are other members of the association who will say he had no right to speak for them. I wish simply to protest against the effort that was made to counteract the influence of the meeting of the 19th of August by introducing in this side-handed way an association whose members would be very glad if their subscription fees which are in the bank to-day were returned to them. (Applause). Gentlemen, I shall not enter into the merits of the case until later on. Possibly I may have an opportunity of doing so, but I take my seat by moving the reception of this report.

## THE SITUATION REVIEWED.

Mr. John Waldie: In seconding the reception of the report, I think perhaps at this early period of the proceedings that the position of the lumbermen, especially of the western portion of Ontario, should be thorougly presented to the meeting, and with the permission of the meeting I will try to give a short resume of the position and conditions that exist to-day.

In discussing the Ontario-Georgian Bay lumber question, we require to look back into the past as well as into the future. Prior to 1890, beginning with the time the Michigan mills began taking saw-logs in quantities from Canada, conditions were equal, there being a $2 export duty charged on the log by the Canadian government and a $2 import duty charged on sawn lumber by the American government, and in this way the condition of the saw mill industry of the two countries was on an equality. In 1890 the Michigan mills and those supplying logs to them from Canada agitated for a removal of the export duty on logs, which resulted in an agreement that the American government should reduce the import duty on lumber to $1, and the Canadian government withdrew the export duty of $2 on logs. Under the Wilson Act the American government put lumber on the free list. The Presidential election of 1896 resulted in the return to power of the Republican party, who advocated a protective policy; but this is the same party who made the agreement with Canada that if there was no export duty charged on saw-logs, the import duty on sawn lumber should only be $1. After the President-elect was installed and the Congress of 1897 had assembled, the Dingley tariff bill was introduced, with a $2 import rate on sawn lumber. The Michigan mill owners, knowing this to be a violation of a national agreement made on their behalf between the government of the United States and the government of Canada, sought by legislation at Washington to prevent Canada returning to the conditions existing before the J. G. Blaine agreement. They, therefore, inserted a clause by which a $4 rate will be charged when Canada exercises her unquestioned right and returns to former conditions of a $2 export duty on logs against a $2 import duty on lumber. In this way, through legislation at Washington, the Michigan mill has the advantage over the Canadian.

### REMEDY PROPOSED.

What remedy do we propose whereby Canadian mills may be placed on even terms? First, should we impose an export duty on logs? This we believe is unnecessary, as there is a simpler and better method, viz., by asking our provincial government to add to the licenses to cut timber, when re-issued on the 30th of April, 1898, a clause that all saw-logs shall be manufactured into lumber at Canadian mills. This is not a new condition; it was approved of by order-in-Council, and governed in the late sale and in one previous, but has not been inserted in the license, and has been so far inoperative. What will be the effect? It will give employment at the Georgian Bay saw mills to 4,000 men and boys at the mills alone for from six to eight months in the year, besides benefitting all other industries incident to the production of the mill machinery, and supplies incident to a manufacturing plant. We have mills at present on the Georgian Bay capable of cutting 350 million feet of lumber by working only ten hours per day. If night crews were used 500 million feet could be cut. Now, the question is whether it is in the public interest that the Canadian mills should get fair play and saw 350 million, or that they should be placed at a disadvantage of $2 per thousand as against Michigan mills, or whether they shall saw 100 million feet of Canadian logs and allow 300 million feet to be sawn in Michigan. That is the question for the government and the people of this province to decide. The log supply of the Georgian Bay is taken largely from two principal streams, viz., the Spanish and French rivers. The work of transforming the log into lumber costs the same in both countries where railway advantages exist, the Michigan mill having a considerable advantage in sale or use of refuse.

### THE GOVERNMENT'S POSITION.

Then, the timber cut under license is the property of the people, and should be dealt with for the benefit of the people. If this principle is admitted our case is won, for no one would deny that it is in the public interest, first, to conserve our forests, and next to give employment to our citizens. Can the government of Ontario interfere with a license issued during the current year? That question I would answer by citing the additional regulations just recently issued. This new regulation being a new condition, does it attach to present licenses or not? If not, there was no need for it. The license being an annual agreement or contract, the government have always advertised that the holders must subject themselves to whatever regulations the government may consider the public interest requires, and in the past many changes have been made. An important one was the taking of the right to cut hardwoods, which was granted in old licenses and taken out without consent of the licensees. This, and many other instances which can be quoted, clearly shows that on a renewal of a license new conditions can be added. Finally, as the Georgian Bay district is the one chiefly affected, action by the Ontario government would relieve us from the oppression of a foreign law, and in no way interfere with other portions of Canada where conditions are different. All we ask is the minimum of interference, giving the maximum of relief. If the logs cannot be cut in Canada, the owners will have to follow them to Michigan, and no Canadian wants either to go there in person or to be obliged to send his son there to look after his interests. Some of the largest mill-owners have already closed down their mills and are selling logs to Michigan buyers.

This is not only a Georgian Bay saw-mill question, but saw-mill men elsewhere are interested. I hold in my hand a telegram from a leading saw-mill industry in Sarnia, which with your permission, sir, I will read:

SARNIA, ONT., Oct. 6th, 1897.

Cannot be present at meeting to-day. Give you full power to vote in our name in movement to urge the government that the crown lands timber be manufactured in Canada, or that a strong export duty be imposed, and we further say there should be a duty on American lumber coming into Canada.

W. T. MURNEY & CO.

Mr. Waldie, continuing: I have also met gentlemen, even in the City of Ottawa, Messrs. Wm. Mason & Sons, who say they are heartily in sympathy with our movement. I feel that a great injustice is being perpetrated on the industry in the Georgian Bay if the government of Ontario take no action; but I fully believe the government will take action, because governments are composed of men appointed by the people, and if I judge correctly the people of Ontario desire this to be done. (A voice: "Hear, hear"). Now, where are we to-day. We have facilities for taking out 400,000,000 feet of logs in the Georgian Bay district. Out of that 400,000,000 feet, under existing circumstances, not 100,000,000 will be manufactured in the Dominion of Canada, and half the mills on the Georgian Bay will be standing idle. One of the wealthiest and oldest lumber companies in Canada, Cook Bros., who have ample wealth, ample limits, ample mills, have closed their mills and sold their logs to Michigan. Is this in the interests of Canada? Is it in the interests of the people of Ontario? I say that in the interests of the people of Ontario every pine tree on the crown lands should be utilized to give employment to the industrial inhabitants of this country. (Hear, hear.) Now, it is not fair that these Michigan mills should be subsidized from Washington by two dollars per thousand as against mills equally equipped and capable on the Georgian Bay owned by Canadians. It is not fair to the Americans who have bought limits here and constructed or leased mills, that they should be sacrificed to the interests of the Michigan mill man who has no interest here beyond getting his logs, and who claims that we are an inferior people. I am not of that opinion at all; I think we are a superior people every time. I am heartily in favor of the proposition embodied in the resolution, and will give it my undivided support until the end of the

MR. C. W. NEWTON,
(Chas. Newton & Son, Victoria Harbor.)

chapter. I don't want to see Mr. Bertram's son become an inhabitant of Michigan; I don't want to see Mr. Beck's son become an inhabitant of Michigan; I don't want to see my own son there; and the result, if no action is taken by this government, will be that our sons will have to follow the log to the Michigan mill to be manufactured. I appeal to the people of Ontario, to the lumbermen here assembled, especially those in the Ottawa district who are not under the same conditions, that they shall see that we get fair play, and that we shall not be hampered and tied down until our birthright is taken away from us and we have got a barren waste. (Applause).

Mr. Beck: Mr. Chairman, I do not wish to say much on this subject, but in the interests of the lumber business we have to come to some conclusion as to what we are going to do. As I understand it the Ontario government has already decided to allow this winter's cut to be exported free. I think that is the general understanding, is it not?

Ald. Scott: Yes.

Mr. Beck: I understood it so, but I read an article in

the Globe last Saturday to a certain extent contradicting that. I would like to get some light on that subject, as to whether it is really settled by the government.

The Chairman: First of all we have to come to the reception of this report. I think that discussion will come up a little later. This report lays out distinctly what the committee appointed by this body got from the government, and now these gentlemen have been talking to move the reception of this report. You have heard it moved by Ald. Scott, seconded by Mr. John Waldie, that this report be received; is that your pleasure?

The report was received.

Ald. Scott: There is no recommendation in the report; it is only a statement of facts, and it commits the meeting to no principle at all.

The Chairman: The notice of this meeting also gives power to take further action with regard to the lumber trade of this province. As I said before, the speeches will be confined to fifteen minutes.

## THE PROPER COURSE TO TAKE.

Mr. John Bertram: I propose to follow the remarks which I may offer to the meeting with a resolution which I feel almost certain will obtain the support of ever lumberman present, without exception. I have endeavored to draw it in such a way that it will raise no questions of a controversial nature, while supporting what was really the view of the lumbermen at the last meeting, and asking that the government should take further action in this matter. It would be quite out of the way for me to offer an assembly of lumbermen here any remarks to the effect of the importance of the position which we now occupy in this controversy, which has arisen and has come upon us on account of the action taken by the American government. This meeting and the former meeting fully testifies that this is so. I will therefore confine myself to discussing what further action we may take in this matter, what further action it would be proper for us to take under the circumstances in which we find ourselves. There is no doubt, Mr. Chairman, that the crisis is a very grave crisis to some of us, and although there are sections here in Ontario that may not be interested in the same way as we are—the Ottawa district, where no American logs are exported, for instance—yet in the Georgian Bay district and its tributaries and in Western Ontario circumstances have arisen that call for the joint action of every one of us. Now, I am not disposed, and do not think any of you are, to say one single word as to the rights of the position of, and the good will which we all feel towards the Americans who have invested money in Canada. I have taken occasion every time that this matter has come up to express my own desire that they should be treated not only justly, but generously; but after we have said that, there is a duty we owe to ourselves and to our country—we must look facts in the face—and they themselves have brought about the very condition of things which we have met here to discuss and on which we must take action. Now, it is quite possible for us to advocate two or three courses as to what the proper position would be for lumbermen to take up in Ontario. One of them is: We may go down to Ottawa and ask that the Ottawa government, which took power to put an export duty of lumber at the last session of Parliament, should exercise that power and place an export duty on logs equivalent to the import duty on lumber going into the United States. That would be the best way to even up the condition of things. There is no doubt, whatever, that it was entirely in the minds of the parties who had the legislation carried out in Washington that that would be done, because it existed for many years—I don't know how many years. As long, I think, as I have been connected with the lumber business there has been an export duty on logs, and this export duty was only done away with by an agreement which was made between the Government of Ontario and the Government at Ottawa. The duty on lumber was reduced from two dollars to one dollar, and they had free access to our timber. Now, it was from no course taken up by our people in Canada that this was changed; it was brought about by the American people themselves, and we are here to-day to say whether we will allow ourselves to remain in the position that our business, that of sawing lumber, must perforce be taken from Ontario and carried on in Michigan. Mr. Waldie correctly stated the case, that if we are to carry on our business under existing circumstances, those who succeed us will be obliged to carry on their business in Michigan—that is the real state of of things.

## LOOKS TO THE ONTARIO GOVERNMENT.

Now, then, what position would it be just and right for us to take up? I don't think, all things considered, that we could go to Ottawa and ask the Ottawa government to take action, for the simple reason that American people themselves have made it impossible, because they have introduced a retaliatory clause which will cause the duty of two dollars per thousand to be raised to four dollars per thousand; therefore, if there is any other way to straighten out this matter, I think it will be better than to go to Ottawa. We might go to Ottawa and ask the Ottawa government not to put a duty on logs, but to prohibit logs altogether, allow no logs to be exported from Canada at all. Now, Mr. Chairman, I am quite prepared to take up either of these two positions. If it is thought by this meeting that it will be better for us to prohibit the export of logs from any part of the Dominion, I am prepared to join and go to Ottawa and advocate it. But I do not think it is necessary to do that. I think that we here in Ontario have an easier and a better plan than we would have by going to Ottawa, and I submit to you the method by which this should be gone about. In speaking of it, I would say that in the action which we propose to take the Ontario government have already themselves assented that it would be in the public interest that all logs should be sawn in Canada, because they introduced a new regulation at the last sale of limits declaring that the timber which was then to be sold should be sawn in the province of Ontario. Therefore they assent, and we now ask them to go one step further.

MR. D. C. CAMERON,
(Rat Portage Lumber Company, Rat Portage, Ont.)

Now, as to our rights to interfere with the license after it had been issued, I have not been able to see eye to eye with my friend, Mr. Scott, in that matter. I have not been able to join with him in the position which he takes that it would be a proper and just thing for us to interfere with current licenses. There is this to be said about it, that after an operator goes into the woods and takes in his men, teams, supplies and other things, and goes on with his operations under the license granted by the government and subject to the provisions of the license, it is reasonable to say that these operations should not be interfered with so far as the destination of the logs goes, and I am not inclined to blame the Ontario government for the action taken. That has been my own opinion from the very first; but while I go as far as that, I think, nevertheless, that we have the absolute power—you all know as well as I do that we have the power; that has never been denied by the Imperial government themselves, that we have the right to put in any regulation in those licenses that has the interests of the public at heart. That is the position, and it is not denied even by the opponents who do not want the Ontario government to take action at all. It is admitted on all hands, I think, that they have the power. The resolution which I submit is as follows:

## MR. BERTRAM'S RESOLUTION.

Moved by John Bertram, seconded by James Scott, that whereas at a meeting of lumbermen held in Toronto on August 19th, it was resolved to present to the government the following declaration: "That in the opinion of this meeting, the exportation of saw logs should be restricted; and with that object in view, the government of the Province of Ontario be requested to so amend the pine timber regulations that all pine timber cut under license in the Province of Ontario shall be manufactured in Canada;" and whereas the committee appointed to wait on the government to urge the adoption of the report have obtained from the Commissioner of Crown Lands an answer to the following effect: "That the government entertain the opinion that during the currency of the existing licenses such action as was proposed by the resolution of the meeting of August 19th could not well be taken." (I may say, however, that the government are very carefully considering what policy should be adopted with reference to the logs cut after the expiration of the existing licenses, and it is hoped that in a short time the public will be made aware of the course which may be determined upon). Be it therefore resolved, that without expressing an opinion on that part of the government policy relating to current licenses, we declare it to be in the public interest that when new licenses are issued after 30th April, 1898, a regulation be embodied in every license that all timber on the Crown Lands of Ontario shall be sawn, made into square timber, or otherwise manufactured in Canada; that a copy of this resolution be sent to the members of the Government of Ontario and to every member of the Legislative Assembly, and that all who approve of this policy use every legitimate effort to have it carried into effect.

## ENTITLED TO JUSTICE.

After reading the resolution, Mr. Bertram said: Now, it is a reasonable thing for us, I think, to give the Ontario government sufficient time—they have had a month in which to make up their minds—but we are absolutely determined in this matter that we are going to have right and justice done no matter who may suffer. This is a matter so vital to many of us that we are determined to push the action as far as we can. We will give the government all fair and reasonable time and terms in which to state their opinion, but we are entitled to an opinion, I think, within a reasonable time.

Regarding the government policy relating to current licenses, Mr. Bertram added: There may be reasonable difference of opinion—you are entitled in voting to hold your own opinion on that matter. The mischief, if any, has been done, because they are into the woods now just as far, I think, as they can go. I know this, that after the Michigan gentlemen were here, with my friend Mr. Charlton (I don't know what special influence they had with the government, I don't know what answer they got), but I can say this of my own knowledge, that they met there on the 7th of September, and that there were individuals in my own district who were waiting during that time; they were waiting and not putting their men into the bush; and within six days after the men were here they were in with their appliances and men. We don't know what answer they got, it was not published, but we know by the effects that took place.

Ald. Scott: I have much pleasure in seconding the resolution, which I may support with some remarks later on.

Mr. Beck: Mr. Chairman and gentlemen, I do not think the resolution goes quite far enough. As far as it goes, I think it is all right. If the Ontario government has committed itself for this year to allow the Americans to take the logs over free, I would not be in favor of it—I do not think they are entitled to have an advantage over the Canadian lumbermen. I propose, in addition to the resolution, that while they are getting the logs without export duty, any logs that are exported should pay double dues and any logs manufactured in Canada should be reduced one-half. I think that would remedy matters for this year, and I fail to see why the government have not a right to do so, as they have formerly raised the dues on all pine timber on Crown lands without giving any notice. All I want is for our government to put us on an equal footing with the Michigan lumbermen, and if what I suggest was done, it would to a large extent place us in that position. The Dominion government could amend the Act so that, instead of two or three dollars duty, the export duty on our logs going to the United States would be equal to the duty charged on our lumber. That would throw the burden on the Americans, and then it would be in the interests of the Michigan people to try and get the duty lowered. Now, they would rather work it the other way. I think the first clause I mentioned might be added to this resolution; the other might be put into a separate resolution later on. These are propositions that it struck me should be considered.

The Chairman: Do I understand you want to move an amendment to the resolution?

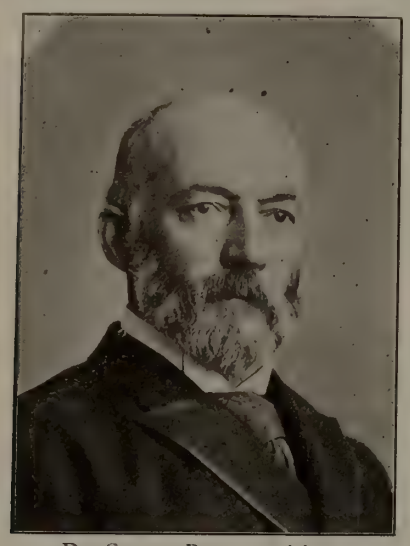
Mr. Beck: I would like to move that.

Dr. Spohn: I think we had better discuss this resolu-

tion, and then if Mr. Beck wishes to bring in another resolution, discuss it separately.

AN OTTAWA VALLEY VIEW.

The next speaker was Mr. Levi Crannell, representing the Bronsons & Weston Lumber Co., of Ottawa. He said: I had a telegram from Mr. Edwards, who expected to be here, and, personally, I regret his absence very much, because I remember that at the meeting in August he coincided with my views very nicely. Owing to fires in the bush, running towards his mill, Mr. Edwards was un-



DR. SPOHN, Penetanguishene.

able to leave last night, as intended. He sent the following telegram:

TELEGRAM FROM MR. EDWARDS.

"I sincerely regret at the last moment to find it impossible for me to go to Toronto, earnestly as I desired to do so because of the importance of the occasion. You know my views fully, and I request you to speak and vote for me, as well as for Mr. Whitney, whom I was to represent. I am unalterably opposed to anything of the nature of export duties, or any interference by the Ontario government with license conditions, considering such both wrong and dangerous. If true that the Ontario government indicated to American holders that under their licenses they could not be restricted for this year's cut, while I would prefer from a selfish standpoint that such should not have been done, at the same time American holders of Canadian licenses are tenants of the Crown equal with Canadian holders, and are entitled to the same rights, and I see no impropriety or wrong in the government interpreting to American holders their rights under their licenses, and do not consider the government at all censurable if they did so. I sincerely hope that wise counsel will prevail, and that a few men will not be permitted to seriously injure or perhaps destroy the whole lumber trade of Canada."

W. C. EDWARDS.

Mr. Crannell: Mr. Edwards expressed himself very fully, as I remarked, when he was here before, and the resolution is practically the same thing that was discussed at that time, with the exception that it is changed until another year instead of for the current year, which the original resolution provided for. I think there is no doubt in the minds of the majority of those present that the government has no right to change the conditions of current licenses; they have the right to change the licenses for another year, though. It is very questionable to my mind as to the extent to which they can change. I am no lawyer, but I have heard good lawyers, lawyers of experience, lawyers who have taken a good deal of interest in the Crown Lands regulations, say that while the Ontario government has the right to make changes in their licenses, those changes are only to the extent of a minor degree—they can change for their protection, they can change ground rent and dues, but they cannot make such changes as would destroy the rights which the license holders now have under their license. For instance, I think we all will agree that the Ontario government could not put such a rate of duty on the logs as would practically confiscate the territory. Now, I have no doubt that the lumbermen of the Georgian Bay section feel the present conditions of things very severely. I regret it exceedingly. I am a member of the Bronsons & Weston Lumber Company, one of the largest timber holders in this province, and as such have material interest in the trade. Now, it seems to me an effort should be made some way or other to get the duty taken off of our lumber. We can't stand it, and you can't stand it. You said at the last meeting that you could not stand two dollars, and that you might just as well stand four. I don't think that is a correct statement. While two dollars is a hardship, four dollars is absolute prohibition; I think everyone will admit that. I also agree with everything you said as to the desirability of having as much as possible of the lumber manufactured in Canada. I feel we should manufacture all raw material here as far as possible—it cannot all be done. Such steps as are proposed must be taken gradually; you cannot all at once pass new laws, turn over new regulations, reaping the benefit of these things. Now, as regards the duty on logs that has been spoken of, it has perhaps no direct connection with this, but it has in a way. We all know the retaliatory clause. I feel that the same condition will exist if there is any discrimatory duty on logs in any way. To be sure, as the case now stands, until December it would not have any effect, but the very minute Congress meets in December the resolutions would be changed over there to cover this particular point. Then we are face to face will the retaliatory clause in force. A great deal was said at the last meeting with regard to the unfair attitude of the United States in putting this two dollar duty on and framing the retaliatory clause. I feel it was not right, but I feel that Canada makes its tariff law, and has a right to make it according to its own idea of its requirement; so with the United States, France and Germany. The United States tariff does not suit our ideas. Surely if we want to have any charge made, it is right and proper, and our duty, to endeavor to see if reciprocal arrangements cannot be entered into. Very well to say we cannot do it; we don't know, we have not tried, and we could not

MR. C. BECK, Penetanguishene.

try until after the act was in force. It seems to me that all of these matters are appertaining particularly to the Dominion of Canada rather than to the local parliament. You all know, perhaps, as well as I do, that the United States have not cut all their timber; they have cut a large amount, but they have not cut within the last few years the annual growth, and they would like an export duty placed on logs here which would bring it under the retaliatory clause. Nothing would please them in Wisconsin better than to have a duty on logs, and it seems to me that we can only make a bad matter worse by taking the action which is proposed to be taken now. I am not in the confidence of the government, but from what I am given to understand, there is no doubt that arrangements have been made and will be carried out whereby a conference of some kind will be entered into and some reciprocity arrangement made. Congress meets in a few months, the Ontario House meets in a few months, and all of this is before the time that the new licenses will be issued, and we will know before then without doubt whether there is any probability of any re-adjustment of trade arrangements being made. If so, surely we are better off to get what we desire amicably; if we can't do it, then it is in order and the proper course to decide what is best to do for the interests of Canada, not for the United States. I hope, gentlemen, that this resolution will be withdrawn. I hope it will be left over until a later time in the season, when it can be discussed with better knowledge and better likelihood of something being arranged, and it may not be necessary at all.

Ald. Scott: I would like to ask Mr. Crannell a question. In what way would the order compelling the manufacture of saw-logs in Canada affect the Ottawa district?

Mr. Crannell: In this way, as I intended to explain: I believe that any order of that kind will be considered by our neighbors to the south of us as another way of getting around the export duty on logs, and as a result their provision will be changed so that it will read to include just such things—and in fact, if I remember right, the earlier provision of the Dingley bill did provide for that, provided for pulp wood and timber and logs all together; then it was changed and the retaliatory clause was broken in two, and that particular discriminating duty was left out. Whether it was more particularly intended for pulp wood or logs I don't know.

Ald. Scott: I would like just to follow out the question so as to get the whole view of the gentleman. Is it only by further retaliatory action on the part of Congress that Ottawa would be affected by this proposed order?

Mr. Crannell: Yes, because I believe that that would do away forever almost with the possibility of getting any reciprocity arrangements, and we want reciprocity.

Ald. Scott: That is no answer.

Mr. Crannell: Perhaps we won't get it that way, but we have not tried. I don't believe in knocking a man down and——

Ald. Scott: You believe in laying down yourself.

Mr. Crannell: I feel we have not been knocked down. Every country has a right to make its own tariff; then, if any particular clause interferes with another country, that country is justified and has a perfect right to endeavor to secure a change in that clause, and that can be done without any humiliation, without admitting you have been knocked down.

Ald. Scott: I would like to get that clear. Suppose the United States did not enact any further retaliation, would this order that we have asked for affect the Ottawa district in the least?

Mr. Crannell: I thought I said only inasmuch as it would prevent our acquiring any reciprocity treaty in any way. I thought I put it that way.

Mr. Leak: If the American government allow our stuff to go in free, what do you think about it then?

Mr. Crannell: I think we are neighbors and it is desirable to have some amicable arrangement.

A voice: You have employed American citizens.

Mr. Crannell: The alien labor question doesn't trouble us at all. We have never had a man in the third of a century I have been in business.

A voice: That is pretty bad law.

Mr. Crannell: I think it is bad law, certainly.

THINKS IT A DOMINION QUESTION.

Mr. John Charlton, M.P.: Mr. Chairman and Gentlemen, I presume I shall take a stand upon this question

MR. D. DAVIDSON, Penetanguishene.

which will convince all the gentlemen present that I am not fishing for popularity, as I feel that I shall be going against the tide and taking a course which is as much as a man's political life is worth to advocate. I do not claim to be the head of the Michigan delegation: it was headed by my brother, W. A. Charlton; I was a spectator. The government made no statement whatever further than to tell them that they would take their representations into serious consideration.

Ald. Scott: Evidently they did.

Mr. Charlton: Yes, evidently they did; the outcome is in the hands of Mr. Scott, I presume. Mr. Scott adverted rather severely to the Ontario goverment. This govern-

ment have done everything that lay in their power to meet popular demand upon this question—they issued an order requiring lumbermen to employ Canadian labor and to purchase Canadian supplies; beyond that they were unable to go. The officers of the crown have decided not to change the condition of licenses until the 30th day of April next. I contend that they will be unable, when the 30th day of April next comes, to make any provision with regard to the export of saw logs, because in doing so they will be usurping the functions of the Dominion government, which, under the British North America Act, has exclusive control in all matters relative to trade and commerce; consequently they can do nothing in this at all. It would be an act ultra vires if the Ontario government should issue the order, and would be disallowed by the Dominion government.

Mr. Bertram: Is it possible for the Dominion government to stop an order-in-council?

Mr. Charlton: It is possible for the Dominion government to make an order that any province interfering with its functions is ultra vires. If the Ontario government were to take this step, and the result was that the Americans would prohibit the export of lumber from any country prohibiting the export of logs, that would apply to the whole Dominion; and the Dominion government could not permit an action to be taken by a province that would imperil the action of other provinces as well as that province. Consequently, I say, Ontario has done everything that lay in her power—they have made the order with regard to the employment of labor and purchase of supplies; they have informed you that they cannot change the conditions of the licenses until the expiry of the term, and they have promised to take into consideration what other action will be taken. Now, Mr. Bertram said in the course of his remarks that the action of the American government has rendered it impossible for us to impose an export duty, and why? Because, under the retaliatory clause the export duty would be added to the import duty on lumber. Now, it is proposed to prohibit the export of logs. If we prohibit the export of logs, I give it as my opinion that I would infinitely rather face the condition of an export duty than face the condition of the action now proposed. We want to take some action that will secure a mitigation of the lumber duties. Now it is proposed to reach this result in an indirect way, and I say that is not an advisable step to take, and I would rather face an export duty, because I believe that, in all human probability, the American Congress would prohibit the importation of lumber entirely. I don't want to face such a contingency. We have a reputation in Canada for fair play and justice. The position is that we have permitted certain men to invest money in timber limits, to acquire 4,000 square miles; they have acquired them at very high prices with an avowed purpose; they were permitted to make the best use of the property their money bought, and for a number of years have been permitted to export their logs. I hold it would be an act of bad faith on the part of the Ontario government to change radically and completely the conditions under which these men purchased their properties, and practically confiscate them. These men cannot manufacture lumber here facing the consequences of adding import to export duty, or having the lumber prohibited from entering the United States if logs are prohibited from going out of this country. They would not dare to do it, and consequently this act would be practical confiscation. We do not want to sell our record for fair dealing by action of that kind. It might be desirable to restrict the output from Canada—it is a great source of wealth that ought to be conserved. If the government wants to do that, let them refrain from putting timber on the market; but having sold this timber, don't then attempt to keep it, and keep bad faith with the purchaser. If it is sold it is beyond government control—it is the property of the purchaser; and that is a view of the case which I think every fair-minded man here, when he considers the matter fully and definitely, will arrive at. The chances that we possess of exercising influence in this matter by retaliatory regulations or legislation are not very good, unfortunately. I am sorry that this is the case. I wish we were masters of the situation; it would be a very simple matter if we were. We furnish the United States with less than 3 per cent. of the lumber consumed in that country. The United States have in the south an inexhaustible supply of pine—some of which is actually sold in our own market, contracts having been taken in our Canadian cities, under our own noses, from the forests of Alabama. We have to face the facts as they are—that is the condition of things, and if we are wise men we will make our influence felt in arranging our commercial policy with the United States in some other way, and we can do it in a scientific and legitimate way that will tell. But it is no use going on a quixotic crusade of this kind and attempting to bring the United States to terms upon the lumber duty—it can't be done.

Ald. Scott: How are we going to bring our influences to bear on the government?

Mr. Charlton: When the Dingley Bill became law there was not a member of the Ways and Means Committee, not a member of the Finance Committee of the United States Senate, the two committees which dealt with this bill, who would say that that bill embodied his views. The members of the sub-committee of the Finance Committee of the Senate were in favor of free lumber. They simply said, "We have to have the votes of the men in favor of a two dollar duty, and in order to get those votes we have to forego our own convictions and allow lumber to be taxed two dollars." I was assured in Washington that the time to place this before Congress was when the tariff was out of the way and when the question could be considered upon its own naked merits, and not mixed up with other business interests, the support of each of which was necessary to the passage of the entire bill. The time to secure a reduction of the bill is before us; the time is when Congress meets again.

## MR. RATHBUN FAVORS AN EXPORT DUTY.

Mr. E. W. Rathbun: There are two or three points referred to by Mr. Charlton that I would like to review with you, and with your permission I will give you the way they appear to me. In the first place, as to the remark that the Ontario government could do nothing further than what they have done, it appears to me that if the Ontario government can legally sell limits with the condition that the logs shall be manufactured in this country, and the Dominion authorities do not interfere with that as an infringement upon their rights, then it is quite within the province of Ontario to say upon the renewal of licenses what the other conditions shall be. ("Hear, hear.") Now, it appears to me quite out of reason to suppose that the licenses that have been issued year after year, with the conditions of change vested in the power of the Ontario government, and which have been recognized and applied and new licenses sold with the very conditions that we ask for, it seems to me quite out of reason that the Dominion government should in any way interfere with these rights—they honored them all through the past. Then, again, about the Alien Bill—I don't think the action of the Ontario government amounts to anything at the present time. We have suffered in very many parts of the province from the labor coming in from the United States, but it was under abnormal conditions. To-day, with the normal conditions of trade existing in the United States and here, there is no danger, I think, of any amount of labor coming from the United States into Canada. The difficulty we have to consider, though, is this: The government, in their reply to the resolution that was presented, speak of a future action, but, under some understanding, the American lumbermen are into the woods to a greater extent than ever before, and we are confronted with the fact that not less than four or five hundred million feet of pine will be taken out and towed to Michigan. The effect of this simply adds to the cost of every log the Canadian takes out, and increases the handicap we are laboring under. They take these logs to the United States, and, having an advantage of not less than three dollars a thousand feet over what we can produce lumber from the logs from the same territory at, compete with the Canadians, with Canadian timber, in Canadian markets and in the markets of the world. That is a most unfortunate position for the trade to be in. What is the remedy? I do not think Mr. Bertram's resolution will prevent the injury that will be done from the avalanche of logs that will be taken off this year and put into the American mills—not only one year's supply, but almost two years. Consequently, while I support heartily the resolution as being the earliest application that the Ontario government can consistently apply—that is, when the present licences are renewed to stipulate that the timber cut shall be manufactured in this province, I contend that the injury that will take place this year will be of the severest character, not only during the coming season, but the season to follow. What can we do to counteract that influence except by the application at once of an export duty? I would not put that export duty in force at the present time, for, when the lumbermen at Ottawa met and considered this question, we finally came to an unanimous conclusion (and the Ottawa gentlemen here were parties to it and even seconded the resolution) that the Dominion government should take power to apply this export duty, and we asked that it should not be on the logs taken out during the current winter, but it should be on the logs taken out during the winter of 1897-8. It appears to me that if we can get the Dominion to at once give notice according to their power that the logs taken out during the winter of 1897-8 would go into the United States market subject to this export duty, that would prevent the imposition of the retaliatory clause on any of the stock that would go over this year or next winter until the new logs went over. Then Mr. Charlton in the meantime would have full scope and opportunity at Washington to go ahead with his negotiations. (Great applause.)

### MANUFACTURE OUR TIMBER AT HOME.

Now, said Mr. Rathbun, I hold that Mr. Charlton makes one serious mistake in connection with this whole matter. I believe I speak the sentiments of the people of Ontario when I say that we want these logs kept in Canada to be manufactured. We are not trying to get this to induce better terms from the United States, but we are fully convinced that we have no moré logs than we can properly manufacture in this province, and our undivided opinion is that they should be kept here for manufacture. It is a duty we owe to our labor, our banks, our loaning societies, our railways. Every one of these great interests demand that the timber shall be kept in this province to be manufactured. It is not retaliation. Further, supposing we put on the export duty; it is not retaliation. Mr. Charlton talks about adopting a conciliatory policy. I ask you, gentlemen, who broke the bargain? There was a bargain made in 1890. There are gentlemen here who know that the United States authorities, this same Republican government which has been referred to by former speakers, made a bargain by which for a one-dollar duty on Canadian lumber there would be free logs. Now, representatives of our new government went there and they received a very cold reception, and returned hopeless of accomplishing anything. We have stuck to the bargain, and the people of Canada would continue to honor it, but the people of the United States have broken it without consideration of Canadian interests, and have coupled with it a threat which is humiliating to every Canadian. (Applause.) The interest of the two-dollar people at Washington is to have free logs, and if we do nothing they will do nothing. This resolution is good and should be accepted, and I don't want to interfere with it, but follow it up with a resolution that the lumber trade of Canada want this export duty applied in the way I said, on the logs that are cut this winter when they go in next year. I contend that is ample notice, and it is in accordance with the resolution of the House; there is no retaliation about it; it is in accordance with the united opinion of the representa tives of both parties in parliament assembled. You speak of injurious effects. I want to ask Mr. Charlton if he advocates the policy which his leader, Laurier, advocates—twenty-five per cent. discrimination against the American. Are the Americans going to take any stronger measures to do injury to Canadians because we protect our own interests in the sawing of logs and support it by the whole country. There is nothing that would inspire the United States to make a stronger effort to have a more solid arrangement with Canada than that twenty-five per cent. clause. We are determining to-day whether we shall simply employ men to take out logs and drive them to Michigan and give them the benefit of our skilled labor and manipulation, or whether we shall develop the lumber industry in our own borders.

Mr. Bertram then introduced Mr. George W. Stevens, of Buffalo, as a gentleman who had an intimate knowledge with what took place at Washington last winter.

## EXPECTS CANADA TO TAKE ACTION.

Mr. George W. Stevens: Mr. Chairman and gentlemen—I spent about three months in Washington, or perhaps a little more, representing the Arthur Hill Company, in the interests of a little tariff or no tariff on lumber. I had access to the homes of half at least of the United States senators, where I had the privilege of going evenings and conversing with them on this matter of a tariff on lumber.

Since the tariff became law, I have devoted a great deal of time in trying to ascertain, if possible, in what way, or if there was any way, that we might get a repeal of the law, that we might get the duty reduced to one dollar a thousand. I returned yesterday from the east, where I went to see one of the most prominent men of the National House of Representatives. I am not at liberty to mention the name, but I put the question to him in this way. I said: "The conditions are not equalized, one class of Americans are towing their logs to Michigan and sawing them, and piling up the lumber in the United States market; another class of Americans is sawing their lumber in Canada and employing very largely American tonnage to carry the lumber to the distributing yards, sash, door and blind factories, etc., and have a two dollar duty against it. Now, I said, how can those Americans who are sawing lumber in Canada get any relief?" He said: "Oh, we don't care anything about you at all, we call you Canucks." Well, I said, I don't know that I seriously object to the term, I was born in the country, and I have a warm place in my heart for the country which gave me birth. I said: your two dollar duty has practically prohibited the lumber from coming in. He replied that that was just what they wanted it to do. Well, I said, can you think of any way out of it, when he remarked: "There is no way out of it only for Canada to do something; if the Canadians can do something and make it hot for the Michigan men who are getting free logs, then we can do something for them." He said: "Why, Stevens, we expect it; we are looking for it to come every day, we believe it will come, we don't believe that those fellows over there are a class of men who have no backbone." Why, gentlemen, continued Mr. Stevens, you can't afford to be the laughing stock of a lot of political demagogues. Who was it that put the retaliatory clause in your bill? Michigan men, who are cutting your logs, nobody else. Why did they put it in there? Because they wanted free logs and two dollars on lumber. Then, who fought us the hardest at Washington to get the two dollar duty? Michigan men, headed by the Hon. Walter S. Eddy. Only about 5½% of the lumber consumed in the United States comes from Canada, and it has had nothing to do whatever with regulating the price on the other 94½%. The Americans are cutting their timber off so fast that they need the supply from this country and I told them so. As a revenue measure the lumber duty was entirely out of order. I said they would never get any money out of it and they admitted it, but I want to say to you that the Michigan men wanted two dollars on lumber and free logs, and headed by Senator Burrows, they got it. John Blodgett and some others in Michigan understood well enough how to fix that thing, and they did it. I hope John Blodgett will hear that. I don't care for John Blodgett. (Applause and laughter.) Now, the gentleman from Ottawa, Mr. Crannell, seems to think that if you take any action whatever that Uncle Sam will get offended at you and jump on you again. Uncle Sam expects you are going to do something, especially New York State, New Hampshire, Connecticut, Rhode Island —all the New England states expect you are going to do something. Senator Morley, of Vermont, told me that if there was any way of digging into this thing he would do it. I said: If you were in favor of a one dollar duty, what is the reason you can't bore a hole into that bill and pull out this lumber schedule next winter? He said: "If we pull out the lumber schedule we will pull out hundreds of other schedules that men are just as dissatisfied over as they are over the lumber schedule, and we will spend our entire time at Congress next session hashing over the entire tariff." He said: "They won't let you get it out, Stevens, it is going to stay there, and you can't bring any power to bear upon the American Congress to get it out; the only way to get it out is for Canada to do something." So, gentlemen, you people belong to the wrong part of the Anglo-Saxon race to have a cotton string up your back. There are too many Irish and Scotch men in this country to be pulled round in that sort of way. You will be like the old German who had a band, and one of his musicians was rather slow about getting round, and the old German did not like it, so he remonstrated with him. At last the musician began to do better, and he thought he would compliment him on it, and he said: "Mr. Miles, I am very much pleased to notice you are quite early of late, you used to be behind before, but I now see you are first at last." You, gentlemen, will be actually first at last. (Prolonged applause.)

## THE PULP INDUSTRY.

Mr. E. J. Loughrin, Sault Ste Marie: In substantiation of the last gentleman's remarks with regard to Canucks, we have a very substantial example here in Canada. The gentleman who refused the Trade Ministership in the McKinley Cabinet is to-day president of the Sault Ste. Marie Pulp & Paper Company. This gentleman, with others, paid $265,000 for water power at Sault Ste. Marie to the town, increased the population of that town by 1,200 people in about eighteen months, employed nearly 1,800 men in the woods around, and expended more money than was expended in the building of the Sault canal, or nearly two millions of dollars. Mr. Dingley in his bill puts an import duty on manufactured pulp of three dollars per ton, and we ask to get two dollars of an export duty put on spruce logs so as to counteract this action. You have to protect the men engaged in Canada. We have to pay three dollars a ton, and that means at 100 tons a day, $300 a day. That mill has got to compete with the Niagara Falls Pulp & Paper Company—why? Because the condition is this: The Niagara Falls Pulp & Paper Co., seeing a scarcity of spruce wood on the the other side—over 239 idle pulp mills in the United States—go to work and build a gigantic plant at Niagara Falls, employ 275 men west of Sault Ste Marie, 90 per cent. of whom are Americans. They take our raw material and we only get 12½ cents stumpage (and it does not pay the bush rangers to look after it), and they tow that across to the other side. There is nearly 200,000 cords of wood taken out of Ontario annually, or 600,000 cords taken out of the Dominion.

Mr. Charlton: Not at all.

Mr. Loughrin: This I take from the American journal.

Mr. Charlton: Our trade and navigation returns say 180,000 cords.

Mr. Loughrin: Your steamboat didn't tow all the lumber out of the country. All we ask for is an export duty, so as to get into the American market, or let them take their duty off—but if they don't take their duty off, let us get what we ask. Why, we have over sixteen rivers from Penetang to Sault Ste Marie and not less than 150 good water powers that would run any pulp mill. As I am the only representative of the pulp business, I would ask you to consider this matter, and I think that resolution will cover the ground. If there is anything that is going to populate and be a benefit to the country, to the wage-earners of the country, the mills, minerals, etc., anything that is going to develop the north shores of Lake Superior and Lake Huron, it is this.

## AN ONTARIO QUESTION.

Mr. C. E. C. Newton, Victoria Harbor: I feel that I am rather out of place perhaps in addressing you, as my interests in the lumber trade are small, still they say that out of the mouths of babes and sucklings there may come a word of truth. I will try to reflect the remarks of a gentleman who addressed you last August, but who, owing to an accident, is not here to-day. I refer to Mr. H. L. Lovering. He spoke for the lumber industry, for the lumbermen, and also for the men themselves. I am in this position at the present time, being reeve of the small township of Tay; but unfortunately, that township has two of the largest industries almost that we have in the Georgian Bay district, the Georgian Bay Lumber Co. and the Victoria Harbor Lumber Co., as well as other smaller mills. When I returned from the last meeting, some of my friends asked me as to the result of the meeting, and I told them what Mr. Edwards and other Quebec people had said, and the answer they gave me was: "They are Quebec lumbermen; what has Quebec to do in Ontario—we are Ontario people, we can direct and carry out our own matters. These men may have interests in Ontario, but do they bring a log down to the Georgian Bay?" Again they said "What was the motive?" and when I had told him, one of the gentlemen stated that in 25 years the probabilities were that there would be no logs left in the Georgian Bay district. Then all that section would have to go to Quebec for their timber, and instead of buying it for six or seven dollars a thousand, they would have to pay ten or twelve dollars; that was the scheme. I may say that I represent the workmen of my district who are dependent upon the lumber industry, and I protest against any interference from the Quebec men.

Mr. Crannell: I wish to tell the gentleman that there was not a man from the province of Quebec here at the last meeting.

Mr. Newton: Do you draw your supplies from Ontario or Quebec?

Mr. Crannell: Very largely from Ontario. We own 1,100 miles of timber limits in Ontario.

Mr. Newton: That is the opinion and feeling, anyway. We feel in Ontario we can look after our own affairs. I have the courage to say that if the government won't give us the answer which we want as lumbermen, they will get the answer in a shape and form before very long that they will not particularly care about.

## FAVORS AN IMPORT DUTY.

Mr. D. C. Cameron (Rat Portage): I did not have the opportunity of meeting you at your previous meeting, but I assure you it affords me much pleasure to be here to-day to listen to the discussion that has taken place. I come from Rat Portage, where we have a little timber and a few mills, and where we manufacture the logs we cut for the western trade. Our interests are not as large as those on the Georgian Bay, and I will therefore not ask for any personal consideration, but would just submit the position and conditions as they prevail in that district and ask you to consider the whole question on the broadest possible ground as you present your case to the government or governments of Canada. I believe this is a matter that should be taken before the Dominion government. I do not think it possible for the people of Ontario to pass legislation that will not have a similar effect, so far as Canada is concerned, as the legislation or regulations that will be made at Ottawa. Therefore, as the Dominion government have absolute control and power to deal with the matter, I think it rests with them. In the Lake of the Woods district we produce annually some sixty millions of pine lumber, which is distributed throughout the Northwest. We bring in a portion of our logs from Minnesota, and in that respect are at the mercy of the regulations that may go into force in the United States. One matter, however, which I think should be placed before the government, is the fact that we have free lumber coming into the market. Probably you are not as much affected by that as we are. To the extent that that lumber comes into Canada you are, as lumbermen, injured by it. The point which I wish to ask you to take up is the question of an import duty on lumber. Why should the people of this country, or any portion of them, be submitted to the unfair competition to which they are being submitted? The lumbermen who are affected by the present tariff have to contribute in the way of high tariff duties on all the commodities which they require for the production of their article. We are so situated in the west that we have no means of competing with our American neighbors; therefore while there is a difference of opinion as to the manner in which the export duty on logs should be dealt with, there should be no difference as to whether we should have an import duty on lumber or not. Lumber is admitted free into Canada notwithstanding the fact that there is a duty on lumber going into the United States. That is the point I would have you take up and impress upon the Ottawa government. While I support the resolution and sentiments expressed by Mr. Bertram and Mr. Rathbun, I would move that the matter of import duties be taken up, and that both be taken up with the government at Ottawa.

## DR. SPOHN SPEAKS.

Dr. Spohn (Penetanguishene): It has been questioned whether the Ontario government has the power or not to compel the manufacture of logs in Ontario. That question has been settled without doubt. The Ontario government some years ago passed an order-in-council that the logs should be manufactured in the country. They also connected this resolution with the last sale. This has not been questioned by the Dominion government, so that so far as their powers are concerned on this particular question, there is no doubt they have the power to do so. Then, in reference to their changing the conditions of the licenses: The Ontario government at one time only charged 71 cents stumpage; they changed that to $1.25, showing that they have the power, and have exercised it, of changing the conditions of the licenses from one year to another. Although I regret that the Ontario government did not see fit in their wisdom to change it this year, we must not forget that in the dealings of governments they are bound by certain trade and commercial lines just the same as anybody else. I think they have not the power to make the change in the middle of the license year. Now, I take exception to some of the remarks

made that our motive in advocating this solution of the question was retaliation. This is a mistake. There is no retaliation about it. We are simply looking after our own affairs in a business sort of way. We have on one side the United States government offering a bonus of $2 per thousand for every board that is manufactured in the United States from Canadian logs; in other words, depriving the Canadian workmen of their natural birthright, the manufacture of logs in our country; and they have actually done a little legislating right here in our own country, for they have added a clause to the Dingley Bill that enacts (in reference to New Brunswick) that if the logs were manufactured into lumber by American labor, the lumber would pass into the United States free of duty. In other words, they put a tax of $2.00 per thousand on Canadian labor on Canadian soil. In view of all this, surely it is time for the government to say that our workmen as well as the lumbermen shall have some protection from this kind of legislation. Surely the government won't stand idly by and allow our logs to be taken to Saginaw, cut into lumber by American labor and then brought back to Canada free of duty, while our mills are shut down and our workmen deprived of a livelihood. They must be told that after this license year expires not one log can be cut for exportation. In reference to the telegram that came from Ottawa expressing the hope that we would take this into our consideration and would not be led away by a few persons. Who, I would like to know, do they mean by a "few persons." We want them to understand that the "few persons" in this case means the province of Ontario and the people of Ontario, except, perhaps a very few interested the other way. The only persons that object are a few Ottawa lumbermen who are not affected in the slightest degree. Their logs cannot be exported to the United States; they must be cut in Ottawa, and it makes no difference to them whether the mills at Georgian Bay are closed or not, or whether the towns and villages of the Georgian Bay are depleted of their population or not. It strikes me as a little selfish that they should wish to control this whole country in reference to a question that concerns them not one bit. My friend here admitted that all logs cut in the Ottawa river must be manufactured there—they cannot be exported to the United States.

Mr. Charlton: I beg your pardon, I did not.

Dr. Spohn: I so understood him, but anyway it is a fact that the Ottawa logs cannot be exported—they must be manufactured in the country and consequently the dire effect resulting from the exportation of logs does not apply to their district. With a difference of more than $2 per thousand on freight, with the opportunity of selling 60 per cent. of their product to Great Britain, they care little what becomes of the rest, and with these advantages in their favor they can afford to look with indifference on the wrecking of the lumber interests on Georgian Bay. They can afford to take a lower price for their coarser grades when they sell their higher grades at a better price. Everyone in the lumber trade knows that the great profit to the country is not in getting logs out of the woods, but in manufacturing the logs into lumber, and while the Georgian Bay men may be patriotic, dollars tell; and when they can get a better price for their lumber in logs to sell to the United States, they cannot withstand the temptation, and the result is they are sent to Michigan to be manufactured, and our workmen are deprived of that right. (Applause.)

Mr. Robert Watt (Wiarton): I quite agree with the last gentleman as far as he has gone, but I think he ought to go a little further and apply it to the licenses now existing, and compel the manufacture of the timber in Canada. There is another matter that has been referred to, viz., the import duty on lumber coming into Canada. There is a great deal of coarse lumber coming in here at the present time, and I think it very important that the Canadian government should put an import duty on American lumber. They take our logs and manufacture them, put the good lumber on the market, and the coarse lumber they dump back onto Canada, sending their good lumber to England. They get their coarse lumber in here free, and we have to pay two dollars to get ours in there. It is very unfair, and should be dealt with immediately. If there was an export duty on logs it would interfere with our hardwood trade, because it would shut out our hardwood lumber entirely. As it is, we can put our lumber in there notwithstanding the duty. I know a large quantity of lumber has gone in there even since the duty was imposed,

## VIEWS OF A DEALER.

Mr. John Piggott, Chatham: I am engaged in the lumber business, but my business pertains more to the lumber yard and planing mills. I have a lumber yard and planing factory at both Windsor and Chatham, and I can speak from an entirely different standpoint than any here to-day have. I would say that the interests of our lumbermen are identical, and it behooves us all to work together for the true interests of Canada. Personally, I am interested in the trade as it is at present. Living on the borders of the United States, I find it very convenient to make purchases there. Within the last year I purchased over three million feet of lumber in the United States, and brought it into Canada. At the same time I don't like to do that. I know the Americans as a class do not consider us at all, and I was very sorry to hear the views of some to-day. It is for us to take what they give us; it is not for us to retaliate. Now, I do not call equalizing matters retaliation. They believe in self protection; we have to follow. I believe it is really in the interests of all lumbermen and all industries connected with the lumber trade to support the resolution. I would very much like to see what Mr. Rathbun proposed, that is, that notice be given that an export duty shall be placed on the logs for next season; I think that is very necessary and proper. As soon as we learn that we can live without the good graces of Uncle Sam the better. If Uncle Sam thinks it is impossible for us to live or transact trade without receiving his good graces, I say it is time for us to give up business. What we want to do is to stand on our merits as lumbermen, and on our rights—I am a free trader—but, as I stated before, they lead and

MR. JOHN CHARLTON, M.P., Lynedoch, Ont.

we have to follow. A great many years ago I met a gentleman on a train, and I asked him what effect would the placing of a duty of 5c. a doz. on eggs have on him, and he said: "It would drive me out of business, I would have no chance whatever, our trade is entirely with the United States." I said: Nothing like having two strings to your bow; I have been to England several times, and I have noticed the large exportation from Denmark and France. Go to the Old Country and you will do better than in the United States. He said: "No, that is impossible, so many of my friends have tried it and it ends in disaster; no use trying it, their ways are so different, and so many charges and obstructions in the way." However, this spring I met the same gentleman and asked him what effect the Dingley Bill was going to have on his business, and he said: "It does not matter to us at all; why, I deal altogether now with the English market." Now, fall back on your resources, follow up Uncle Sam; he exports a large amount of lumber—where does he send it to? Find out, hunt up their markets, go to Africa; there will be very soon a large market in Cuba, cut them out at their own game. We have as good business men as there is on the other side, as good mills as they have, and why shouldn't we be able to hold our own with them? I believe in taking a broad view of the matter. I see the working of the alien labor law. I see a mechanic going over there; a friend has written to him to come and assist him at a certain job; they have men on the railway ferries crossing the river whose business it is to watch parties going over. They say: "Where are you going, what are you going to do?" "I am going to so and so." "What are you going to do there?" "Going to work." "Well, go back, you are a Canadian, we don't want you." Now, I think that is a blot on the liberty of the nineteenth century. However, I think it is right, as I said before—they lead and we have to follow. How long will our stock of timber last at the present rate of cutting. In a few years you will find we have nothing. It is for us to work for the interests of the many rather than for those of the few; it is for us to reverse the action of Uncle Sam who legislates in the interests of the few at the expense of the many—in the interests of monopoly and combines. It is not the will of the people on the other side that this import duty is placed on Canadian lumber; it is a few of the wealthy people; they don't consider the country, they are not true patriots, they are men of selfish interests. If we don't look after our own country Uncle Sam will. As soon as we have self reliance the more we will be thought of by Uncle Sam and other countries.

## A WORD FOR THE HARDWOOD TRADE.

Mr. J. P. Newman (Wiarton): I have no intention of making a speech at this late hour of the meeting. As a representative of the hardwood business of the Bruce Peninsula, I wish simply to relate a few facts in regard to that industry. Under the McKinley Act we used to send our hardwood lumber to the United States; after the act was replaced by free lumber under the Wilson Act we did not receive one dollar more for it. Now, how has the Dingly Act affected the hardwood trade. As an illustration, I sent a cargo to the United States just before the Dingley Bill became law; I also sent one to the same destination since it came into force at a reduction of 25 cents per M feet, and further, I have been offered a contract of two million feet of hardwood at the same price as I received before the duty was imposed. Now, an export duty on logs means an extra two dollar duty on lumber, which would debar us from the American market entirely. So far as sentiment goes I am in entire sympathy with the action taken in connection with the resolution, but I think so far as the hardwood trade of the peninsula is concerned, it would be a very serious injury to it. We, of course, may find another market, but we are so far from the British market that we cannot hope to compete with the eastern part of the province. I simply relate these facts in the interests of the hardwood trade of my section. While it may benefit pine dealers it will be a very great detriment to the hardwood trade.

## FAVORS THE RESOLUTION.

Mr. D. Davidson (Penetanguishene): I think there has been sufficient said against our logs going out of the country to satisfy the most scrupulous gentlemen that are here to-day. Those who have been raised in Ontario and who have the interests of Canada at heart, especially Ontario, cannot feel that they are doing justice to allow our resources to go out of the country in the manner they are going, and getting no return for them. We should without a doubt have all our logs manufactured within our province, which would place us as lumbermen on an equal footing with the lumbermen on the other side. They have more than two dollars of an advantage over us, as the towing of the logs, with the facilities for so doing, does not cost them anything like what it costs us for freight. As far as the Province of Ontario is concerned this question has only one side, and that is the right side, and the people are on that side. To me it seems the utmost folly to allow our logs to be taken to Michigan to be manufactured into lumber there, and then allow this lumber, together with all other lumber from the United States, to come back into Canada free of duty, while Canadians who manufacture lumber in this country are charged $2 duty to take it into the United States. I am not in the secrets of the government, but it is well known what Ontario wants, and as I believe the present government is an up-to-date government, I feel satisfied that before these licenses expire the limit owners who have mills in Michigan will be notified that under the new license all logs must be manufactured in the province. I am in perfect sympathy with the resolution and will do all in my power to assist in having it carried out.

Ald. Scott: I wish to read a telegram just received from two gentlemen. This is from Hepworth, signed by two who were with us last time, but who could not be here to-day:

HEPWORTH, Ont., Oct. 6th, 1897.

Sorry we cannot be at meeting to-day. We strongly favor the manufacture of all pine saw logs in Canada, otherwise an export duty of $3 per thousand feet, unless

American government admit our lumber free. Lumbermen of Owen Sound are with us.

J. E. MURPHY and C. H. WITTHUN & Co.

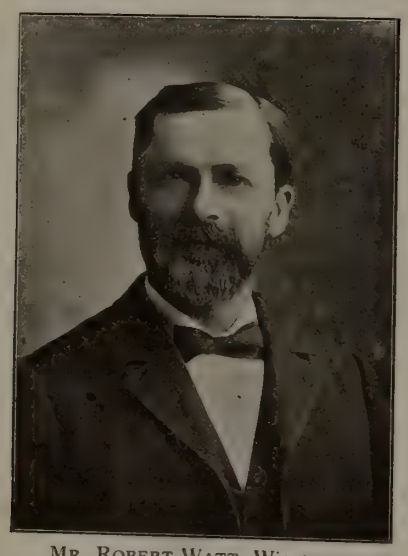
Ald. Scott, continuing: I think, in view of the necessity of getting a vote on this subject at an early moment, it would be unnecessary that I should say anything more, although I wished to reply to some of my friend Charlton's statements and arguments, as well as Mr. Crannell's. I had taken some notes to reply to them, but I think the whole subject has been pretty well threshed out, and even if they are not met by argument I don't think the meeting will lose anything by taking a vote at the present time.

Mr. Bertram: I intend also to forego any argument which I would make in reply to Mr. Charlton. I think we are ready for the vote. I would only say this, that when Mr. Charlton makes statements that the Ontario government should not take this action, the Ontario government does not agree with Mr. Charlton, because they have already taken action, at the last sale of timber limits here, in preventing the taking of the logs out of Canada. The two cases are exactly parallel.

Mr. Charlton: The condition was not made in respect to the licenses that are in question.

## THE VOTE TAKEN.

The Chairman: As an outsider, gentlemen, it seems to me that this matter would stand a great deal of threshing out, and I think it is a pity that I have found it necessary to close the debate before everybody has had an opportunity of saying something on the subject if they wished to. I think every man interested in the lumber business should take a personal interest in this question, not only by his presence, but by speaking either in favor of or against the resolution. As a chairman, I have to be decidedly unbiased one way or the other. The matter of the Federal government's duty with regard to the export of logs has been brought into the discussion by two or three of the gentlemen; also an import duty on American lumber—that I understand also is a Federal question altogether. Therefore, to discuss these subjects I feel would require a much longer time than we here are evidently prepared to give it, as it is a matter that requires prompt attention, prompt action, and the enthusiasm of every lumberman who is interested in the business. It is none of my business to say so, but I think these meetings should be held frequently and the matter gone thoroughly into, because it is quite evident by what the



MR. ROBERT WATT, Wiarton.

provincial government say themselves that they are prepared to take some action.

A vote was then taken on the resolution, the result being 42 for and 4 against.

## AN EXPORT DUTY ASKED FOR.

Mr. Rathbun then moved the following resolution:

Moved by E. W. Rathbun, seconded by James Playfair, that the Dominion government be urged to give notice at the earliest practicable moment, by order-in-council, of the application of an export duty of $2.00 per thousand feet of lumber in log or timber form, and an equivalent duty on spruce pulpwood, cut during the season of 1897-8 and exported to the United States, and that a copy of this resolution be forwarded by the Secretary of this meeting to the Honorable the Premier of Canada, with the names of those supporting the resolution.
